		Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?		
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?		
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?		

Inclusive Communities - Housing	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	0	Neutral impact (existing features retained or appropriate mitigation).
	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?		
		Will it provide for housing for the ageing population?		
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	No effect on pitch or plot provision.
Inclusive Communities - Redressing inequalities and involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	0	Minor Rural Centre
		Sub-Indicator: Distance to centre	+	512m ACF from the centre of the site to a cross road location which illustrates a main cluster of services and facilities within the village.
		Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	0	No facilities lost, and no new facilities proposed directly as a result of the development.
		Will improve relations between people from different backgrounds or social groups?		
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will it redress inequalities?		
		Will it increase the ability of people to influence decisions, including 'hard to reach' groups?		
	Encourage and enable the active involvement of local people in community activities	Will it encourage engagement with community activities?	0	No facilities lost, and no new facilities proposed directly as a result of the development.

Economic Activity		Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	0	Development would have no effect on employment land or premises.
	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	Development would have no effect on vitality or viability of existing centres. The indicator is likely to apply particularly to sites which include retail, offices, or leisure uses.
		Will it encourage the rural economy and diversification, and support sustainable tourism?		
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it contribute to providing a range of employment opportunities, in accessible locations?	0	37.85 minutes from site to nearest employment area with 2000+ employees. No employment areas with 2000+ employees can be accessed in less than 30mins - 1.6km walk.
		Will it improve the level of investment in key community services and infrastructure, including broadband?	+	Minor Utilities Infrastructure improvements required, but constraints can be addressed. There is insufficient spare mains water capacity within the distribution zone to supply the number of proposed properties which could arise if all the SHLAA sites within the zone were to be developed. The WWTW is operating close to capacity and the sewerage network is at capacity and both will require mitigation
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve access to education and training, and support provision of skilled employees to the economy?	+	Insufficient spare school capacity but potential for improvement to meet needs.

Transport		Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	0	Total score of 12.
	Reduce the need to travel and promote more sustainable transport choices.	Sub-indicator: Distance to bus stop / rail station	+	457m ACF from the centre of the site to the nearest bus stop.
		Sub-indicator: Frequency of Public Transport	---	Less than an hourly service.
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	+	30 Minutes from Gamlingay to St. Neots.
		Sub-indicator: Distance for cycling to City Centre or Market Town	+	7.59km ACF from the centre of the site to Sandy Market.
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	0	No capacity constraints identified, safe access can be achieved.
		Will it make the transport network safer for and promote use of non-motorised modes?	+	The Highway Authority will require new development to provide or contribute to the provision of infrastructure to encourage more sustainable transport links both on and off site. Provision or contribution from this site would result in minor improvement to public transport, walking or cycling facilities.

Site No. Site 173
Address Land off Honey Hill, Gamlingay
Location Gamlingay
Category of site Minor Rural Centre
Site area 4.51

Theme	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	0	No previously developed land.
		Will it use land efficiently?		
		Will it protect and enhance the best and most versatile agricultural land?	0	Development would not affect best and most versatile agricultural land (Grades 1 and 2).
		Will it avoid the sterilisation of economic mineral reserves? Will it minimise the degradation/loss of soils due to new development?	0	Site within an area designated in the Minerals and Waste LDF but development would not have a negative impact.
	Minimise waste production and support the reuse and recycling of waste products	Will it encourage reduction in household waste, and increase waste recovery and recycling?		
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	0	Development unlikely to impact on air quality. Site lies in an area where air quality acceptable.
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	0	Development compatible with neighbouring uses.
		Will it minimise, and where possible address, land contamination?	+++	This site was previously a licensed landfill site. Potential for major benefits through remediation of significant contamination
		Will it protect and where possible enhance the quality of the water environment?	0	Assumptions for a neutral impact are that appropriate standards and pollution control measures will be achieved through the development process, e.g. as part of Sustainable Drainage Systems (Suds).
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiversity?	0	No impact on protected sites and species (or impacts could be mitigated).
	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	0	Assumptions for a neutral impact are that existing features that warrant retention can be retained or appropriate mitigation will be achieved through the development process.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process.

Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	---	Significant Negative Impact (Development conflicts with landscape character, with significant negative impacts incapable of mitigation) - Development of this site would have an adverse impact on the landscape setting of Gamlingay by bringing the village down from the ridge into open countryside so increasing its visibility from the south and by detracting from the landscape and townscape value of the Listed Building at 61 Mill Street aka 6 Honey Hill which looks to the south down Mill Lane.
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	---	Development of this site would have an adverse impact on the landscape setting of Gamlingay by bringing the village down from the ridge into open countryside so increasing its visibility from the south and by detracting from the landscape and townscape value of the Listed Building at 61 Mill Street aka 6 Honey Hill which looks to the south down Mill Lane.
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	---	Significant Negative Impact (Development conflicts with townscape character, with significant negative impacts incapable of mitigation). Northern edge of site adjoins Conservation Area. Adverse effect as prominent on approach to CA and village and on meadow valley edge. Adverse effect due to loss of significant open countryside separating Mill Street village core from hamlet at Mill Hill. A Grade II Listed Building lies 50 metres to the north of the site on Mill Street/Honey Hill which is a distinctive landmark on the village edge, adverse effect due to loss of rural context and slope of land.
	Create places, spaces and buildings that work well, wear well and look good	Will it lead to developments built to a high standard of design and good place making that reflects local character?		
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	0	
		Will it promote energy efficiency?		
		Will it minimise contributions to climate change through sustainable construction practices?		
	Reduce vulnerability to future climate change effects	Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	-	Part of site adjoining Millbridge Brook is within Flood Zone 3 (or other form of flood risk incapable of appropriate mitigation). Remainder of site in zones 1 and 2.
		Will it minimise the likely impacts of climate change on the development through appropriate design?		
		Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?		
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?		
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?		

Inclusive Communities - Housing	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	0	Neutral impact (existing features retained or appropriate mitigation).
	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?		
		Will it provide for housing for the ageing population?		
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	No effect on pitch or plot provision.
Inclusive Communities - Redressing inequalities and involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	0	Minor Rural Centre
		Sub-Indicator: Distance to centre	0	686m ACF from the centre of the site to a cross road location which illustrates a main cluster of services and facilities within the village.
		Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	0	No facilities lost, and no new facilities proposed directly as a result of the development.
		Will improve relations between people from different backgrounds or social groups?		
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will it redress inequalities?		
		Will it increase the ability of people to influence decisions, including 'hard to reach' groups?		
	Encourage and enable the active involvement of local people in community activities	Will it encourage engagement with community activities?	0	No facilities lost, and no new facilities proposed directly as a result of the development.

Economic Activity		Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	0	Development would have no effect on employment land or premises.
	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	Development would have no effect on vitality or viability of existing centres. The indicator is likely to apply particularly to sites which include retail, offices, or leisure uses.
		Will it encourage the rural economy and diversification, and support sustainable tourism?		
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it contribute to providing a range of employment opportunities, in accessible locations?	0	41.05 minutes from site to nearest employment area with 2000+ employees. No employment areas with 2000+ employees can be accessed in less than 30mins - 1.6km walk.
		Will it improve the level of investment in key community services and infrastructure, including broadband?	+	Minor Utilities Infrastructure improvements required, but constraints can be addressed. There is insufficient spare mains water capacity within the distribution zone to supply the number of proposed properties which could arise if all the SHLAA sites within the zone were to be developed. The WWTW is operating close to capacity and the sewerage network is at capacity and both will require mitigation
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve access to education and training, and support provision of skilled employees to the economy?	+	Insufficient spare school capacity but potential for improvement to meet needs.

Transport		Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	0	Total score of 11.
	Reduce the need to travel and promote more sustainable transport choices.	Sub-indicator: Distance to bus stop / rail station	0	693m ACF from the centre of the site to the nearest bus stop.
		Sub-indicator: Frequency of Public Transport	---	Less than an hourly service.
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	+	30 Minutes from Gamlingay to St. Neots.
		Sub-indicator: Distance for cycling to City Centre or Market Town	+	6.96km ACF from the centre of the site to Sandy Market.
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	0	No capacity constraints identified, safe access can be achieved.
		Will it make the transport network safer for and promote use of non-motorised modes?	+	The Highway Authority will require new development to provide or contribute to the provision of infrastructure to encourage more sustainable transport links both on and off site. Provision or contribution from this site would result in minor improvement to public transport, walking or cycling facilities.

Site No. Site 174
Address Land off Green End, Gamlingay
Location Gamlingay
Category of site Minor Rural Centre
Site area 1.52

Theme	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	0	No previously developed land.
		Will it use land efficiently?		
		Will it protect and enhance the best and most versatile agricultural land?	0	Development would not affect best and most versatile agricultural land (Grades 1 and 2).
	Minimise waste production and support the reuse and recycling of waste products	Will it avoid the sterilisation of economic mineral reserves? Will it minimise the degradation/loss of soils due to new development?	0	Site not within an area designated in the Minerals and Waste LDF
Will it encourage reduction in household waste, and increase waste recovery and recycling?				
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	0	Development unlikely to impact on air quality. Site lies in an area where air quality acceptable.
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	0	Development compatible with neighbouring uses.
		Will it minimise, and where possible address, land contamination?	+++	This site was previously a licensed landfill site. Potential for major benefits through remediation of significant contamination
		Will it protect and where possible enhance the quality of the water environment?	0	Assumptions for a neutral impact are that appropriate standards and pollution control measures will be achieved through the development process, e.g. as part of Sustainable Drainage Systems (Suds).
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiversity?	0	No impact on protected sites and species (or impacts could be mitigated).
	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	0	Assumptions for a neutral impact are that existing features that warrant retention can be retained or appropriate mitigation will be achieved through the development process.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process.

Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	-	Minor Negative Impact (Development conflicts with landscape character, minor negative impacts incapable of mitigation). Development of this site would have an adverse impact on the landscape setting by reducing the transitional area of small fields, hedgerows and trees and by the creation of a promontory of built development into the countryside. The upper floors of houses would be visible above retained hedgerows to the detriment of the rural character of the area.
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	-	Minor Negative Impact (development conflicts with townscape character, minor negative impacts incapable of mitigation) - Development of this site would have an adverse impact on the townscape by the loss of separation between the hamlets of Dennis Green and Green End.
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	---	Significant Negative Impact on historic Assets (incapable of satisfactory mitigation). Adjoining cottage at 1 Dennis Green Listed Grade II. Adverse effect due to loss of significant open countryside and separation between hamlet of Dennis Green from Green End. Major adverse effect on setting, with loss of rural context and green backdrop. Loss of former village green (Dennis Green).
		Create places, spaces and buildings that work well, wear well and look good	Will it lead to developments built to a high standard of design and good place making that reflects local character?	
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	0	
		Will it promote energy efficiency?		
		Will it minimise contributions to climate change through sustainable construction practices?		
	Reduce vulnerability to future climate change effects	Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	0	Flood Zone 1 and no drainage issues that cannot be appropriately addressed.
		Will it minimise the likely impacts of climate change on the development through appropriate design?		
Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?				
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?		
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?		

Inclusive Communities - Housing	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	0	Neutral impact (existing features retained or appropriate mitigation).
	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?		
		Will it provide for housing for the ageing population?		
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	No effect on pitch or plot provision.
Inclusive Communities - Redressing inequalities and involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	0	Minor Rural Centre
		Sub-Indicator: Distance to centre	+	477m ACF from the centre of the site to a cross road location which illustrates a main cluster of services and facilities within the village.
		Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	0	No facilities lost, and no new facilities proposed directly as a result of the development.
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will improve relations between people from different backgrounds or social groups?		
		Will it redress inequalities?		
		Will it increase the ability of people to influence decisions, including 'hard to reach' groups?		
	Encourage and enable the active involvement of local people in community activities	Will it encourage engagement with community activities?	0	No facilities lost, and no new facilities proposed directly as a result of the development.

Economic Activity		Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	0	Development would have no effect on employment land or premises.
	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	Development would have no effect on vitality or viability of existing centres. The indicator is likely to apply particularly to sites which include retail, offices, or leisure uses.
		Will it encourage the rural economy and diversification, and support sustainable tourism?		
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it contribute to providing a range of employment opportunities, in accessible locations?	0	32.93 minutes from site to nearest employment area with 2000+ employees. No employment areas with 2000+ employees can be accessed in less than 30mins - 1.6km walk.
		Will it improve the level of investment in key community services and infrastructure, including broadband?	+	Minor Utilities Infrastructure improvements required, but constraints can be addressed. There is insufficient spare mains water capacity within the distribution zone to supply the number of proposed properties which could arise if all the SHLAA sites within the zone were to be developed. The WWTW is operating close to capacity and the sewerage network is at capacity and both will require mitigation
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve access to education and training, and support provision of skilled employees to the economy?	+	Insufficient spare school capacity but potential for improvement to meet needs.

Transport	Reduce the need to travel and promote more sustainable transport choices.	Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	0	Total score of 14.
		Sub-indicator: Distance to bus stop / rail station	+++	155m ACF from the centre of the site to the nearest bus stop.
		Sub-indicator: Frequency of Public Transport	---	Less than an hourly service.
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	+	30 Minutes from Gamlingay to St. Neots.
		Sub-indicator: Distance for cycling to City Centre or Market Town	+	6.62km ACF from the centre of the site to Sandy Market.
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	0	No capacity constraints identified, safe access can be achieved.
		Will it make the transport network safer for and promote use of non-motorised modes?	0	No impact to public transport, walking or cycling facilities

Site No. Site 175
Address Moores Farm, Fowlmere Road, Foxton
Location Foxton
Category of site Group Village
Site area 0.69

Theme	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	+++	75% or more Previously Developed Land (PDL)
		Will it use land efficiently?		
		Will it protect and enhance the best and most versatile agricultural land?	-	Minor loss of best and most versatile agricultural land (Grades 1 and 2)
	Minimise waste production and support the reuse and recycling of waste products	Will it avoid the sterilisation of economic mineral reserves? Will it minimise the degradation/loss of soils due to new development?	0	Site not within an area designated in the Minerals and Waste LDF.
Will it encourage reduction in household waste, and increase waste recovery and recycling?				
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	0	Development unlikely to impact on air quality. Site lies in an area where air quality acceptable.
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	0	Development compatible with neighbouring uses.
		Will it minimise, and where possible address, land contamination?	+	Potential for minor benefits through remediation of minor contamination. Agricultural / farm buildings, requires assessment,
		Will it protect and where possible enhance the quality of the water environment?	0	Assumptions for a neutral impact are that appropriate standards and pollution control measures will be achieved through the development process, e.g. as part of Sustainable Drainage Systems (Suds).
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiversity?	0	No impact on protected sites and species (or impacts could be mitigated).
	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	0	Assumptions for a neutral impact are that existing features that warrant retention can be retained or appropriate mitigation will be achieved through the development process.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process.

Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	0	Neutral impact (generally compatible, or capable of being made compatible with local landscape character). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process.
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	0	The residential development of this site would replace existing agricultural buildings and hardstandings and would have a neutral impact on the townscape of Foxtan. Neutral impact (generally compatible, or capable of being made compatible with local townscape character). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process.
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Archaeological potential will require further information but the assumption for a neutral impact is that it is likely appropriate mitigation can be achieved through the development process.
	Create places, spaces and buildings that work well, wear well and look good	Will it lead to developments built to a high standard of design and good place making that reflects local character?		
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	0	Standard requirements for renewables would apply.
		Will it promote energy efficiency?		
		Will it minimise contributions to climate change through sustainable construction practices?		
	Reduce vulnerability to future climate change effects	Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	0	Flood Zone 1 and no drainage issues that cannot be appropriately addressed.
		Will it minimise the likely impacts of climate change on the development through appropriate design?		
		Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?		
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?		
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?		

Inclusive Communities - Housing	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	0	Neutral impact (existing features retained or appropriate mitigation).
	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?		
		Will it provide for housing for the ageing population?		
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	No effect on pitch or plot provision.
Inclusive Communities - Redressing inequalities and involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	-	Group Village
		Sub-Indicator: Distance to centre	+	539m to The White Horse pub, central to village in relation to other services and facilities.
	Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)		0	No facilities lost, and no new facilities proposed directly as a result of the development.
		Will improve relations between people from different backgrounds or social groups?		
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will it redress inequalities?		
		Will it increase the ability of people to influence decisions, including 'hard to reach' groups?		
Encourage and enable the active involvement of local people in community activities	Will it encourage engagement with community activities?	0	No facilities lost, and no new facilities proposed directly as a result of the development.	

Economic Activity		Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	0	Development would have no effect on employment land or premises.
	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	Development would have no effect on vitality or viability of existing centres. The indicator is likely to apply particularly to sites which include retail, offices, or leisure uses.
		Will it encourage the rural economy and diversification, and support sustainable tourism?		
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it contribute to providing a range of employment opportunities, in accessible locations?	+	26.89 minutes from site to nearest employment area with 2000+ employees. Only 1 employment area with 2000+ employees that can be accessed in less than 30mins - 1.6km walk.
		Will it improve the level of investment in key community services and infrastructure, including broadband?	+++/+	Development can use existing capacity in utilities infrastructure. The sewerage network is approaching capacity and will require investigation and possibly mitigation.
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve access to education and training, and support provision of skilled employees to the economy?	+++	Sufficient surplus capacity available in all catchment schools.

Transport	Reduce the need to travel and promote more sustainable transport choices.	Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	+	Total score of 16.
		Sub-indicator: Distance to bus stop / rail station	+	876m ACF from the centre of the site to the nearest train station. 599m ACF from the centre of the site to the nearest bus stop.
		Sub-indicator: Frequency of Public Transport	-	Hourly service (Train). Hourly service (Bus).
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	+++	9 minutes from Foxton to Royston (train). 17 minutes from Foxton to Royston (bus).
		Sub-indicator: Distance for cycling to City Centre or Market Town	+	9.72km ACF centre of site to Royston Market
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	0	No capacity constraints identified, safe access can be achieved.
		Will it make the transport network safer for and promote use of non-motorised modes?	+	The Highway Authority will require new development to provide or contribute to the provision of infrastructure to encourage more sustainable transport links both on and off site. Provision or contribution from this site would result in minor improvement to public transport, walking or cycling facilities.

Site No. Site 176
Address East Farm, Melbourn
Location Melbourn
Category of site Minor Rural Centre
Site area 2.83

Theme	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	0	No previously developed land.
		Will it use land efficiently?		
		Will it protect and enhance the best and most versatile agricultural land?	-	Minor loss of best and most versatile agricultural land (Grades 1 and 2)
		Will it avoid the sterilisation of economic mineral reserves? Will it minimise the degradation/loss of soils due to new development?	0	Site not within an area designated in the Minerals and Waste LDF.
	Minimise waste production and support the reuse and recycling of waste products	Will it encourage reduction in household waste, and increase waste recovery and recycling?		
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	0	Development unlikely to impact on air quality. Site lies in an area where air quality acceptable.
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	0	Development compatible with neighbouring uses.
		Will it minimise, and where possible address, land contamination?	+	Potential contamination from agricultural use, potential for minor benefits through remediation of minor contamination
		Will it protect and where possible enhance the quality of the water environment?	0	Assumptions for a neutral impact are that appropriate standards and pollution control measures will be achieved through the development process, e.g. as part of Sustainable Drainage Systems (Suds).
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiversity?	0	No impact on protected sites and species (or impacts could be mitigated).
	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	0	Assumptions for a neutral impact are that existing features that warrant retention can be retained or appropriate mitigation will be achieved through the development process.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process.

Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	0/-	Minor Negative Impact (Development conflicts with landscape character, minor negative impacts incapable of mitigation) to neutral impact (generally compatible, or capable of being made compatible with local landscape character). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process. Development would have an adverse effect on the landscape setting of Melbourn through the development of an enclosed orchard which adds to the rural setting of the village. The impact of this could be mitigated by retention of trees and hedges on the boundary and wherever possible on the remainder of the site.
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	0	Neutral impact (generally compatible, or capable of being made compatible with local townscape character). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process.
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Archaeological potential will require further information but the assumption for a neutral impact is that it is likely appropriate mitigation can be achieved through the development process.
	Create places, spaces and buildings that work well, wear well and look good	Will it lead to developments built to a high standard of design and good place making that reflects local character?		
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	0	Standard requirements for renewables would apply.
		Will it promote energy efficiency?		
	Reduce vulnerability to future climate change effects	Will it minimise contributions to climate change through sustainable construction practices?		
		Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	0	Flood Zone 1 and no drainage issues that cannot be appropriately addressed.
		Will it minimise the likely impacts of climate change on the development through appropriate design?		
	Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?			
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?		
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?		
	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	0	Neutral impact (existing features retained or appropriate mitigation).

Inclusive Communities - Housing	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?		
		Will it provide for housing for the ageing population?		
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	No effect on pitch or plot provision.
Inclusive Communities - Redressing Inequalities and Involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	0	Minor Rural Centre
		Sub-Indicator: Distance to centre	-	813m from the centre of the site to a point on High Street, Melbourn which represents the centre of a cluster of services and facilities
		Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	0	No facilities lost, and no new facilities proposed directly as a result of the development.
		Will improve relations between people from different backgrounds or social groups?		
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will it redress inequalities?		
		Will it increase the ability of people to influence decisions, including 'hard to reach' groups?		
Encourage and enable the active involvement of local people in community activities	Will it encourage engagement with community activities?	0	No facilities lost, and no new facilities proposed directly as a result of the development.	

Economic Activity		Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	0	Development would have no effect on employment land or premises.
	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	Development would have no effect on vitality or viability of existing centres. The indicator is likely to apply particularly to sites which include retail, offices, or leisure uses.
		Will it encourage the rural economy and diversification, and support sustainable tourism?		
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it contribute to providing a range of employment opportunities, in accessible locations?	+++	11.83 minutes from site to nearest employment area with 2000+ employees. Only 1 employment area with 2000+ employees that can be accessed in less than 30mins - 1.6km walk.
		Will it improve the level of investment in key community services and infrastructure, including broadband?	+++/+	Development can use existing capacity in utilities infrastructure. The sewerage network is approaching capacity and will require investigation and possibly mitigation.
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve access to education and training, and support provision of skilled employees to the economy?	+++	Sufficient surplus capacity available in all catchment schools.

Transport	Reduce the need to travel and promote more sustainable transport choices.	Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	+	Total score of 16.
		Sub-indicator: Distance to bus stop / rail station	+	507m ACF from centre of the site to nearest bus stop to best service.
		Sub-indicator: Frequency of Public Transport	-	Hourly service.
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	+++	32 Minutes from Melbourn to Cambridge. 9 Minutes from Melbourn to Royston.
		Sub-indicator: Distance for cycling to City Centre or Market Town	+	5.24km ACF centre of site to Saffron Walden Market.
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	0	No capacity constraints identified, safe access can be achieved.
		Will it make the transport network safer for and promote use of non-motorised modes?	+	The Highway Authority will require new development to provide or contribute to the provision of infrastructure to encourage more sustainable transport links both on and off site. Provision or contribution from this site would result in minor improvement to public transport, walking or cycling facilities.

Site No. Site 177
Address Land off Oakington Road, Girton
Location Girton
Category of site Group Village
Site area 3.12

Theme	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	0	No previously developed land.
		Will it use land efficiently?		
		Will it protect and enhance the best and most versatile agricultural land?	0	Development would not affect best and most versatile agricultural land (Grades 1 and 2).
		Will it avoid the sterilisation of economic mineral reserves? Will it minimise the degradation/loss of soils due to new development?	0	Site not within an area designated in the Minerals and Waste LDF.
	Minimise waste production and support the reuse and recycling of waste products	Will it encourage reduction in household waste, and increase waste recovery and recycling?		
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	0	Development unlikely to impact on air quality. Site lies in an area where air quality acceptable.
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	0	Development compatible with neighbouring uses. Some potential for traffic noise from A14, but should be possible to mitigate. Possible noise and malodour from Dapple and Manor Farm as proposals would be closer than existing residential, but no history of complaints.
		Will it minimise, and where possible address, land contamination?	0	Development not on land likely to be contaminated
		Will it protect and where possible enhance the quality of the water environment?	0	Assumptions for a neutral impact are that appropriate standards and pollution control measures will be achieved through the development process, e.g. as part of Sustainable Drainage Systems (Suds).
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiversity?	0	No impact on protected sites and species (or impacts could be mitigated).
	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	0	Assumptions for a neutral impact are that existing features that warrant retention can be retained or appropriate mitigation will be achieved through the development process.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	+	Provision of open space as part of the development. Potential to link to bridleway to north and footpath to east.

Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	-	Minor Negative Impact (Development conflicts with landscape character, minor negative impacts incapable of mitigation) - Site currently forms an area of rural separation between the edge of the village and a complex of farm and commercial uses to the north, and creates a soft edge and visually interesting entrance to the village from the north. The approach to the northern edge of Girton is concealed by tall hedgerows bordering the road, therefore with careful design it may be possible to mitigate the impact on the landscape.
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	0 / -	Neutral impact (generally compatible, or capable of being made compatible with local townscape character). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process. Site currently forms an area of rural separation between the edge of the village and a complex of farm and commercial uses to the north, and creates a soft edge and visually interesting entrance to the village from the north.
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Archaeological potential will require further information but the assumption for a neutral impact is that it is likely appropriate mitigation can be achieved through the development process. Grade II Listed Building to south east. Archaeological potential.
	Create places, spaces and buildings that work well, wear well and look good	Will it lead to developments built to a high standard of design and good place making that reflects local character?		
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	0	Standard requirements for renewables would apply.
		Will it promote energy efficiency?		
	Reduce vulnerability to future climate change effects	Will it minimise contributions to climate change through sustainable construction practices?		
		Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	-	Flood Zone 2, drainage issues capable of being appropriately addressed . 1/2 site in Flood Zones 2 and 3.
		Will it minimise the likely impacts of climate change on the development through appropriate design?		
		Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?		
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?		
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?		
	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	+	Provision of open space as part of the development.

Inclusive Communities - Housing	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?		
		Will it provide for housing for the ageing population?		
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	No effect on pitch or plot provision.
Inclusive Communities - Redressing Inequalities and Involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	-	Group Village
		Sub-Indicator: Distance to centre	+	560m from the centre of the site to the village hall (Cotton Hall), central to the other services and facilities within the village.
		Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	0	No facilities lost, and no new facilities proposed directly as a result of the development. Provision of open space as part of the development, but on northern edge of built area with limited accessibility.
		Will improve relations between people from different backgrounds or social groups?		
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will it redress inequalities?		
		Will it increase the ability of people to influence decisions, including 'hard to reach' groups?		
Encourage and enable the active involvement of local people in community activities	Will it encourage engagement with community activities?	0	No facilities lost, and no new facilities proposed directly as a result of the development.	

Economic Activity		Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	0	Development would have no effect on employment land or premises.
	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	Development would have no effect on vitality or viability of existing centres. The indicator is likely to apply particularly to sites which include retail, offices, or leisure uses.
		Will it encourage the rural economy and diversification, and support sustainable tourism?		
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it contribute to providing a range of employment opportunities, in accessible locations?	+++	14.99 minutes from site to nearest employment area with 2000+ employees. 8 employment areas with 2000+ employees that can be accessed in less than 30mins - 1.6km walk.
		Will it improve the level of investment in key community services and infrastructure, including broadband?	+	Minor Utilities Infrastructure improvements required, but constraints can be addressed. There is insufficient spare mains water capacity within the distribution zone to supply the number of proposed properties which could arise if all the SHLAA sites within the zone were to be developed. The WWTW is operating close to capacity and the sewerage network is at capacity and both will require mitigation.
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve access to education and training, and support provision of skilled employees to the economy?	-	School capacity not sufficient, but significant issues can be adequately addressed

Transport	Reduce the need to travel and promote more sustainable transport choices.	Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	+++	Total score of 20.
		Sub-indicator: Distance to bus stop / rail station	+++	126m ACF from the centre of the site to the nearest bus stop.
		Sub-indicator: Frequency of Public Transport	+	20 minute service.
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	+++	16 minutes from Girton to Cambridge.
		Sub-indicator: Distance for cycling to City Centre or Market Town	+	5.16km ACF from the centre of the site to Cambridge Market.
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	0	No capacity constraints identified, safe access can be achieved.
		Will it make the transport network safer for and promote use of non-motorised modes?	0	no impact

Site No. Site 178
Address Land east of Sawston
Location Sawston
Category of site Rural Centre
Site area 17.21

Theme	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	0	No previously developed land.
		Will it use land efficiently?		
		Will it protect and enhance the best and most versatile agricultural land?	-	Minor loss of best and most versatile agricultural land (Grades 1 and 2) - part of site Grade 2.
		Will it avoid the sterilisation of economic mineral reserves? Will it minimise the degradation/loss of soils due to new development?	0	Site not within an area designated in the Minerals and Waste LDF.
	Minimise waste production and support the reuse and recycling of waste products	Will it encourage reduction in household waste, and increase waste recovery and recycling?		
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	0	Development unlikely to impact on air quality. Site lies in an area where air quality acceptable.
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	0	Development compatible with neighbouring uses.
		Will it minimise, and where possible address, land contamination?	0	Development not on land likely to be contaminated.
		Will it protect and where possible enhance the quality of the water environment?	0	Development unlikely to affect water quality. The site within Groundwater Source Protection Zone 2 which does not rule out development but may influence land use or require pollution control measures. Assumptions for a neutral impact are that appropriate standards and pollution control measures will be achieved through the development process and will mitigate any impact on groundwater.
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiversity?	0	No impact on protected sites and species (or impacts could be mitigated).
	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	+	Minor positive impact as there are some opportunities for enhancement through the provision of treebelts and hedgerows.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process.

Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	0/+	Neutral impact (generally compatible, or capable of being made compatible with local landscape character). Loss of land in Green Belt would have an adverse impact on Green Belt purposes. Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process. Development of this site would have the potential to have a positive impact upon the landscape setting of Sawston provided the design makes a generous provision of land to ensure a soft green edge to the east. The southern boundary crosses a field horizontally to respect the setting of Sawston Hall, a new hedge or plantation would be necessary here.
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	0	Neutral impact (generally compatible, or capable of being made compatible with local townscape character). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process. Adjoins estate housing to the west.
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	0/-	Minor Negative Impact on historic Assets (incapable of satisfactory mitigation) – site forms part of the wider setting of Sawston Hall albeit well screened by trees. new woodland plantation to southern boundary would help mitigate this impact. Archaeological potential will require further information but the assumption for a neutral impact is that it is likely appropriate mitigation can be achieved through the development process.
	Create places, spaces and buildings that work well, wear well and look good	Will it lead to developments built to a high standard of design and good place making that reflects local character?		
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	0	Standard requirements for renewables would apply.
		Will it promote energy efficiency?		
	Reduce vulnerability to future climate change effects	Will it minimise contributions to climate change through sustainable construction practices?		
		Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	0	Flood Zone 1 and no drainage issues that cannot be appropriately addressed.
		Will it minimise the likely impacts of climate change on the development through appropriate design?		
	Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?			
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?		
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?		
	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	+	Development would deliver significant new public open space. Proposed 6.8 hectares for open space uses.

Inclusive Communities - Housing	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?		
		Will it provide for housing for the ageing population?		
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	No effect on pitch or plot provision.
Inclusive Communities - Redressing Inequalities and Involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	+	Rural Centre.
		Sub-Indicator: Distance to centre	-	884m ACF from the centre of the site Sawston High Street -a cluster of services and facilities within the village.
		Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	+	New facilities or improved existing facilities are proposed of minor benefit. Call for Sites questionnaire states that part of the site could be used to provide for small scale community facilities such as a Doctors Surgery and shops.
		Will improve relations between people from different backgrounds or social groups?		
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will it redress inequalities?		
		Will it increase the ability of people to influence decisions, including 'hard to reach' groups?		
Encourage and enable the active involvement of local people in community activities	Will it encourage engagement with community activities?	+/0	No facilities lost, and no new facilities proposed directly as a result of the development. Call for Sites Questionnaire refers to potential to provide additional community facilities.	

Economic Activity		Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	0	Development would have no effect on employment land or premises.
	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	Development would have no effect on vitality or viability of existing centres. The indicator is likely to apply particularly to sites which include retail, offices, or leisure uses.
		Will it encourage the rural economy and diversification, and support sustainable tourism?		
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it contribute to providing a range of employment opportunities, in accessible locations?	+	25.87 minutes from site to nearest employment area with 2000+ employees. Only 1 employment area with 2000+ employees that can be accessed in less than 30mins - 1.6km walk.
		Will it improve the level of investment in key community services and infrastructure, including broadband?	-	Minor Utilities Infrastructure improvements required, but constraints can be addressed. There is insufficient spare mains water capacity within the distribution zone to supply the number of proposed properties which could arise if all the SHLAA sites within the zone were to be developed. The sewerage network is at capacity and will require mitigation. Electricity supply is likely to require local and upstream reinforcement.
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve access to education and training, and support provision of skilled employees to the economy?	-	School capacity not sufficient, but significant issues can be adequately addressed. Site could potentially provide additional playing fields for the nearby Primary School to enable its expansion on site.

Transport	Reduce the need to travel and promote more sustainable transport choices.	Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	0	Total score of 13.
		Sub-indicator: Distance to bus stop / rail station	0	696m ACF from the centre of the site to the nearest bus stop.
		Sub-indicator: Frequency of Public Transport	+	20 minute service to Cambridge. Hourly service to Saffron Walden.
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	0	39 Minutes from Sawston to Cambridge. 29 Minutes from Sawston to Saffron Walden.
		Sub-indicator: Distance for cycling to City Centre or Market Town	0	10.01km ACF from the centre of the site to Cambridge Market.
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	0/-	Minor negative effects incapable of mitigation. Access constraints - The Highways Authority comment that the existing access link to the public highway is unsuitable to serve the number of units that are being proposed. Access to the site could also be via a new junction to Babraham Road to also serve site 258. Further to the south additional access could be gained via Church Lane and The Green Road subject to impact on character of Conservation Area.
		Will it make the transport network safer for and promote use of non-motorised modes?	0	No impact

Site No. Site 179
Address Land west of Whittlesford
Location Whittlesford
Category of site Group Village
Site area 23.29

Theme	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	0	No previously developed land.
		Will it use land efficiently?		
		Will it protect and enhance the best and most versatile agricultural land?	-	Minor loss of best and most versatile agricultural land (Grades 1 and 2) - small site but Grade 2 for northern section and Grade 3 for rest. (23.29 ha.)
		Will it avoid the sterilisation of economic mineral reserves? Will it minimise the degradation/loss of soils due to new development?	0	Small part of site within an area designated in the Minerals and Waste LDF but development would not have a negative impact.
	Minimise waste production and support the reuse and recycling of waste products	Will it encourage reduction in household waste, and increase waste recovery and recycling?		
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	0	Development unlikely to impact on air quality. Site lies in an area where air quality acceptable.
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	-	Development compatible with neighbouring uses. The west of the site bounds the M11. Residential could be acceptable with high level of mitigation.
		Will it minimise, and where possible address, land contamination?	0	Development not on land likely to be contaminated.
		Will it protect and where possible enhance the quality of the water environment?	0	Development unlikely to affect water quality. The site within Groundwater Source Protection Zone 3 which does not rule out development but may influence land use or require pollution control measures. Assumptions for a neutral impact are that appropriate standards and pollution control measures will be achieved through the development process and will mitigate any impact on groundwater,
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiversity?	0	No impact on protected sites and species (or impacts could be mitigated).
	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	0	Assumptions for a neutral impact are that existing features that warrant retention can be retained or appropriate mitigation will be achieved through the development process.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process. A bridleway follows beside the hedge on the southern boundary of the site from Hill Farm Road in a westward direction.

Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	---	Significant Negative Impact (Development conflicts with landscape character, with significant negative impacts incapable of mitigation) - The site is of a scale that would be out of character with the village. It does not relate well the village, located well to the west of the heart of the village, and sandwiched between M11 and Hill Farm Road. The site is very exposed, particularly to the south. Noise from the M11 will require a high level of mitigation, which is likely to be intrusive in such an exposed location.
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	---	Significant Negative Impact (Development conflicts with townscape character, with significant negative impacts incapable of mitigation) - The site is of a scale that would be out of character with the village. It does not relate well the village, located well to the west of the heart of the village, and sandwiched between M11 and Hill Farm Road. The site is very exposed, particularly to the south. Noise from the M11 will require a high level of mitigation, which is likely to be intrusive in such an exposed location.
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Archaeological potential will require further information but the assumption for a neutral impact is that it is likely appropriate mitigation can be achieved through the development process.
	Create places, spaces and buildings that work well, wear well and look good	Will it lead to developments built to a high standard of design and good place making that reflects local character?		
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	0	Standard requirements for renewables would apply.
		Will it promote energy efficiency?		
		Will it minimise contributions to climate change through sustainable construction practices?		
	Reduce vulnerability to future climate change effects	Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	0	Flood Zone 1 and no drainage issues that cannot be appropriately addressed.
		Will it minimise the likely impacts of climate change on the development through appropriate design?		
		Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?		
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?		
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?		

Inclusive Communities - Housing	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	0	Neutral impact (existing features retained or appropriate mitigation). Assumption is standard requirements for open space would apply.
	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?		
		Will it provide for housing for the ageing population?		
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	No effect on pitch or plot provision.
Inclusive Communities - Redressing inequalities and involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	-	Group village
		Sub-Indicator: Distance to centre	---	Beyond 1000m from the centre of the site to Whittlesford Post Office, a central point in the village surrounded by services and facilities
		Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	0	No facilities lost, and no new facilities proposed directly as a result of the development.
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will improve relations between people from different backgrounds or social groups?		
		Will it redress inequalities?		
	Encourage and enable the active involvement of local people in community activities	Will it increase the ability of people to influence decisions, including 'hard to reach' groups?		
Will it encourage engagement with community activities?		0	No facilities lost, and no new facilities proposed directly as a result of the development.	

Economic Activity		Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	0	Development would have no effect on employment land or premises.
	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	Development would have no effect on vitality or viability of existing centres. The indicator is likely to apply particularly to sites which include retail, offices, or leisure uses.
		Will it encourage the rural economy and diversification, and support sustainable tourism?		
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it contribute to providing a range of employment opportunities, in accessible locations?	+	29.94 minutes from site to nearest employment area with 2000+ employees. Only 1 employment area with 2000+ employees that can be accessed in less than 30mins - 1.6km walk.
		Will it improve the level of investment in key community services and infrastructure, including broadband?	-	Major utilities Infrastructure improvements required, but constraints can be addressed. The electricity, mains water, gas and sewerage systems will need reinforcement to increase capacity.
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve access to education and training, and support provision of skilled employees to the economy?	-	School capacity not sufficient, but significant issues can be adequately addressed

Transport	Reduce the need to travel and promote more sustainable transport choices.	Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	-	Total score of 9.
		Sub-indicator: Distance to bus stop / rail station	+	415m ACF from the centre of the site to the nearest bus stop.
		Sub-indicator: Frequency of Public Transport	-	Hourly Service
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	---	51 minutes to Cambridge
		Sub-indicator: Distance for cycling to City Centre or Market Town	0	10.83km ACF from the centre of the site to Cambridge Market.
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	0	No capacity constraints identified, safe access can be achieved.
		Will it make the transport network safer for and promote use of non-motorised modes?	+	The Highway Authority will require new development to provide or contribute to the provision of infrastructure to encourage more sustainable transport links both on and off site. Provision or contribution from this site would result in a significant improvement to public transport, walking or cycling facilities

Site No. Site 180
Address Land off St Neots Road, Hardwick
Location Hardwick
Category of site Group Village
Site area 7.04

Theme	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	0	No previously developed land. Site includes on residential property
		Will it use land efficiently?		
		Will it protect and enhance the best and most versatile agricultural land?	-	Minor loss of best and most versatile agricultural land (Grades 1 and 2) - small site and only quarter is grade 2 - rest is grade 3
		Will it avoid the sterilisation of economic mineral reserves? Will it minimise the degradation/loss of soils due to new development?	0	Site is not within an area designated in the Minerals and Waste LDF
	Minimise waste production and support the reuse and recycling of waste products	Will it encourage reduction in household waste, and increase waste recovery and recycling?		
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	0	Development unlikely to impact on air quality. Site lies in an area where air quality acceptable.
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	-	Development compatible with neighbouring uses. Environmental Health concerned about noise from workshops/warehouses at rear of St Neots Rd -many need to be assessed. Some minor to moderate additional road traffic noise generation impact on existing residential due to development related car movements but dependent on location of site entrance
		Will it minimise, and where possible address, land contamination?	0	Development not on land likely to be contaminated.
		Will it protect and where possible enhance the quality of the water environment?	0	Development unlikely to affect water quality. Assumptions for a neutral impact are that appropriate standards and pollution control measures will be achieved through the development process, e.g. as part of Sustainable Drainage Systems (Suds).
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiversity?	0	No impact on protected sites and species (or impacts could be mitigated).
	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	0	Assumptions for a neutral impact are that existing features that warrant retention can be retained or appropriate mitigation will be achieved through the development process.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process.

Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	---	Significant Negative Impact (Development conflicts with landscape character, with significant negative impacts incapable of mitigation) - Development of this site is likely to result in the loss of an enclosed wooded area that provides the transitional edge to the village.
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	-	Minor Negative Impact (development conflicts with townscape character, minor negative impacts incapable of mitigation) - Would result in further non linear development south of St Neots Rd.
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Archaeological potential will require further information but the assumption for a neutral impact is that it is likely appropriate mitigation can be achieved through the development process.
	Create places, spaces and buildings that work well, wear well and look good	Will it lead to developments built to a high standard of design and good place making that reflects local character?		
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	0	Standard requirements for renewables would apply.
		Will it promote energy efficiency?		
		Will it minimise contributions to climate change through sustainable construction practices?		
	Reduce vulnerability to future climate change effects	Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	0	Flood Zone 1 and no drainage issues that cannot be appropriately addressed.
		Will it minimise the likely impacts of climate change on the development through appropriate design?		
Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?				
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?		
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?		

Inclusive Communities - Housing	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	0	Neutral impact (existing features retained or appropriate mitigation).
	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?		
		Will it provide for housing for the ageing population?		
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	No effect on pitch or plot provision.
Inclusive Communities - Redressing inequalities and involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	-	Group Village
		Sub-Indicator: Distance to centre	0	643m from the centre of the site to Limes Road, north of the school, a central point in the village surrounded by services and facilities
		Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	0	No facilities lost, and no new facilities proposed directly as a result of the development.
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will improve relations between people from different backgrounds or social groups?		
		Will it redress inequalities?		
	Encourage and enable the active involvement of local people in community activities	Will it increase the ability of people to influence decisions, including 'hard to reach' groups?		
Will it encourage engagement with community activities?		0	No facilities lost, and no new facilities proposed directly as a result of the development.	

Economic Activity		Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	0	Development would have no effect on employment land or premises.
	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	Development would have no effect on vitality or viability of existing centres. The indicator is likely to apply particularly to sites which include retail, offices, or leisure uses.
		Will it encourage the rural economy and diversification, and support sustainable tourism?		
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it contribute to providing a range of employment opportunities, in accessible locations?	+	17.71 minutes from site to nearest employment area with 2000+ employees. 8 employment areas with 2000+ employees that can be accessed in less than 30mins - 1.6km walk.
		Will it improve the level of investment in key community services and infrastructure, including broadband?	+	Minor Utilities Infrastructure improvements required, but constraints can be addressed. There is insufficient spare mains water capacity within the distribution zone to supply the number of proposed properties which could arise if all the SHLAA sites within the zone were to be developed. The WWTW is operating at capacity and the sewerage network is at capacity and both will require mitigation.
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve access to education and training, and support provision of skilled employees to the economy?	-	School capacity not sufficient, but significant issues can be adequately addressed

Transport	Reduce the need to travel and promote more sustainable transport choices.	Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	+	Total score of 18.
		Sub-indicator: Distance to bus stop / rail station	+++	331m ACF from the centre of the site to the nearest bus stop.
		Sub-indicator: Frequency of Public Transport	+	20 minute service.
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	+	26 minutes from Hardwick to Cambridge
		Sub-indicator: Distance for cycling to City Centre or Market Town	+	8.17km ACF from the centre of the site to Cambridge Market.
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	---	Insufficient capacity or access constraints that cannot be adequately mitigated. Highway Authority consider that the access link to the public highway is unsuitable to serve the number of units that are being proposed.
		Will it make the transport network safer for and promote use of non-motorised modes?	0	No impact

Site No. Site 181
Address Land to the West of Green End, Comberton
Location Comberton
Category of site Group Village
Site area 6.02

Theme	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	-	No previously developed land.
		Will it use land efficiently?		
		Will it protect and enhance the best and most versatile agricultural land?	-	Minor loss of best and most versatile agricultural land (Grades 1 and 2) - small site but all Grade 2.
		Will it avoid the sterilisation of economic mineral reserves? Will it minimise the degradation/loss of soils due to new development?	0	Site not within an area designated in the Minerals and Waste LDF.
	Minimise waste production and support the reuse and recycling of waste products	Will it encourage reduction in household waste, and increase waste recovery and recycling?		
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	0	Development unlikely to impact on air quality. Site lies in an area where air quality acceptable.
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	0	Development compatible with neighbouring uses.
		Will it minimise, and where possible address, land contamination?	0	Development not on land likely to be contaminated
		Will it protect and where possible enhance the quality of the water environment?	0	Development unlikely to affect water quality. Assumptions for a neutral impact are that appropriate standards and pollution control measures will be achieved through the development process and will mitigate any impact on groundwater. Almost all of site included within a protection zone.
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiversity?	0	No impact on protected sites and species (or impacts could be mitigated). Ecological value of ponds and site should be investigated prior to development.
	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	0	Assumptions for a neutral impact are that existing features that warrant retention can be retained or appropriate mitigation will be achieved through the development process.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process.

Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	-	Minor Negative Impact (Development conflicts with landscape character, minor negative impacts incapable of mitigation). Adverse impact on Green Belt purposes. The development of this site would develop part of the enclosed fields and paddocks forming a soft edge to the village in this location, it would also bring additional traffic to Green End which currently has a tranquil rural character. Development of this site would also introduce backland development behind the linear single depth of properties fronting Green End and overall have an adverse effect on the landscape setting and townscape of Comberton.
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	-	Minor Negative Impact (development conflicts with townscape character, minor negative impacts incapable of mitigation). Development of this site would also introduce backland development behind the linear single depth of properties fronting Green End and overall have an adverse effect on the townscape of Comberton.
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	---	Significant Negative Impact on historic Assets (incapable of satisfactory mitigation). Major adverse impact on backdrop and open rural functional settings of Manor and Manor Farmhouse, Listed Grade II, which are within 10 metres of the site. Non-statutory archaeological site – Former moated site adjacent. Ridge and furrow earthworks of medieval agriculture survive in this area; part of the field systems associated with the medieval village.
	Create places, spaces and buildings that work well, wear well and look good	Will it lead to developments built to a high standard of design and good place making that reflects local character?		
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	0	Standard requirements for renewables would apply.
		Will it promote energy efficiency?		
		Will it minimise contributions to climate change through sustainable construction practices?		
	Reduce vulnerability to future climate change effects	Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	0	Site in Flood Zone 1 and no drainage issues that cannot be appropriately addressed.
		Will it minimise the likely impacts of climate change on the development through appropriate design?		
Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?				
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?		
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?		

Inclusive Communities - Housing	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	0	Neutral impact (existing features retained or appropriate mitigation).
	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?		
		Will it provide for housing for the ageing population?		
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	No effect on pitch or plot provision.
Inclusive Communities - Redressing inequalities and involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	-	Group Village
		Sub-Indicator: Distance to centre	+	437m from the centre of the site to the main cross roads, a central point in the village surrounded by services and facilities.
		Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	0	No facilities lost, and no new facilities proposed directly as a result of the development.
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will improve relations between people from different backgrounds or social groups?		
		Will it redress inequalities?		
		Will it increase the ability of people to influence decisions, including 'hard to reach' groups?		
	Encourage and enable the active involvement of local people in community activities	Will it encourage engagement with community activities?	0	No facilities lost, and no new facilities proposed directly as a result of the development.

Economic Activity		Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	0	Development would have no effect on employment land or premises.
	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	Development would have no effect on vitality or viability of existing centres. The indicator is likely to apply particularly to sites which include retail, offices, or leisure uses
		Will it encourage the rural economy and diversification, and support sustainable tourism?		
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it contribute to providing a range of employment opportunities, in accessible locations?	0	31.00 minutes from site to nearest employment area with 2000+ employees. No employment areas with 2000+ employees that can be accessed in less than 30mins - 1.6km walk.
		Will it improve the level of investment in key community services and infrastructure, including broadband?	+	Minor Utilities Infrastructure improvements required, but constraints can be addressed. There is insufficient spare mains water capacity within the distribution zone to supply the number of proposed properties which could arise if all the SHLAA sites within the zone were to be developed. The sewerage network is at capacity and will require mitigation.
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve access to education and training, and support provision of skilled employees to the economy?	+	Insufficient spare school capacity but potential for improvement to meet needs. Current spare capacity at the local primary School. Secondary places deficit is being addressed by the construction of a new school at Cambourne to relieve Comberton VC.

Transport		Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	0	Total score of 14.
	Reduce the need to travel and promote more sustainable transport choices.	Sub-indicator: Distance to bus stop / rail station	+	430m ACF from the centre of the site to the nearest bus stop.
		Sub-indicator: Frequency of Public Transport	-	Hourly service.
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	+	23 Minutes from Comberton to Cambridge.
		Sub-indicator: Distance for cycling to City Centre or Market Town	+	7.25km ACF from the centre of the site to Cambridge Market.
		Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	-
	Will it make the transport network safer for and promote use of non-motorised modes?		0	No impact.

Site No. Site 182
Address Land north of New Road, Over
Location Over
Category of site Group Village
Site area 2.85

Theme	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	0	No previously developed land.
		Will it use land efficiently?		
		Will it protect and enhance the best and most versatile agricultural land?	-	Minor loss of best and most versatile agricultural land (Grades 1 and 2) - small site but all Grade 2 (2.72 ha.)
		Will it avoid the sterilisation of economic mineral reserves? Will it minimise the degradation/loss of soils due to new development?	0	Site within an area designated in the Minerals and Waste LDF but development would not have a negative impact.
	Minimise waste production and support the reuse and recycling of waste products	Will it encourage reduction in household waste, and increase waste recovery and recycling?		
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	0	Development unlikely to impact on air quality. Site lies in an area where air quality acceptable.
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	--- / -	Will create significant negative impacts to, or as a result of, the development, incapable of adequate mitigation. Site in close proximity to an existing skateboard park, play equipment and general recreation ground / MUGA at Over Community Centre / Recreation Ground - would require relocation of skate park. May be negative impact of flood lighting.
		Will it minimise, and where possible address, land contamination?	0	Development not on land likely to be contaminated.
		Will it protect and where possible enhance the quality of the water environment?	0	Assumptions for a neutral impact are that appropriate standards and pollution control measures will be achieved through the development process, e.g. as part of Sustainable Drainage Systems (Suds)
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiversity?	0	No impact on protected sites and species (or impacts could be mitigated). There are several protected Elms, Ash and Horse Chestnut trees within the site. There are further groups of protected trees immediately to the north east and north west of the site.
	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	0	Assumptions for a neutral impact are that existing features that warrant retention can be retained or appropriate mitigation will be achieved through the development process.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process. A byway runs along the northern boundary of the site and a footpath runs along Anglesey Way to the east.

Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	-	Minor Negative Impact (Development conflicts with landscape character, minor negative impacts incapable of mitigation) - The recreation ground and the surrounding pastureland do not form part of this urban scene relating more to the open countryside to the south and west of the site. The area is part of this rural landscape. Development of the site would have a detrimental impact on the rural character of this part of the village.
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	---	Significant Negative Impact (Development conflicts with townscape character, with significant negative impacts incapable of mitigation) - The recreation ground and the surrounding pastureland do not form part of this urban scene relating more to the open countryside to the south and west of the site. The area is part of this rural landscape. Development of the site would have a detrimental impact on the rural character of this part of the village.
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Archaeological potential will require further information but the assumption for a neutral impact is that it is likely appropriate mitigation can be achieved through the development process.
	Create places, spaces and buildings that work well, wear well and look good	Will it lead to developments built to a high standard of design and good place making that reflects local character?		
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	0	Standard requirements for renewables would apply.
		Will it promote energy efficiency?		
		Will it minimise contributions to climate change through sustainable construction practices?		
	Reduce vulnerability to future climate change effects	Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	0	Flood Zone 1 and no drainage issues that cannot be appropriately addressed.
		Will it minimise the likely impacts of climate change on the development through appropriate design?		
	Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?			
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?		
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?		

Inclusive Communities - Housing	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	0 / -	Neutral impact (existing features retained or appropriate mitigation). Assumption is standard requirements for open space would apply. Relocation of skate park away from other recreation uses.
	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?		
		Will it provide for housing for the ageing population?		
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	No effect on pitch or plot provision.
Inclusive Communities - Redressing inequalities and involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	-	Group Village
		Sub-Indicator: Distance to centre	+++	259m from the centre of the site to a point along The Lanes, a central point in the village surrounded by services and facilities.
		Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	0	No facilities lost, and no new facilities proposed directly as a result of the development.
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will improve relations between people from different backgrounds or social groups?		
		Will it redress inequalities?		
	Encourage and enable the active involvement of local people in community activities	Will it increase the ability of people to influence decisions, including 'hard to reach' groups?		
Will it encourage engagement with community activities?		0 / -	Neutral impact (existing features retained or appropriate mitigation). Assumption is standard requirements for open space would apply. Relocation of skate park away from other recreation uses.	

Economic Activity		Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	0	Development would have no effect on employment land or premises.
	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	Development would have no effect on vitality or viability of existing centres. The assumption is that the local centre proposed will only be of a suitable scale to serve needs of new residents and will not impact on other centres.
		Will it encourage the rural economy and diversification, and support sustainable tourism?		
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it contribute to providing a range of employment opportunities, in accessible locations?	+	19.07 minutes from site to nearest employment area with 2000+ employees. 2 employment areas with 2000+ employees that can be accessed in less than 30mins - 1.6km walk.
		Will it improve the level of investment in key community services and infrastructure, including broadband?	+	Minor Utilities Infrastructure improvements required, but constraints can be addressed. There is insufficient spare mains water capacity within the distribution zone to supply the number of proposed properties which could arise if all the SHLAA sites within the zone were to be developed. The sewerage network is approaching capacity and will require mitigation.
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve access to education and training, and support provision of skilled employees to the economy?	-	School capacity not sufficient, but significant issues can be adequately addressed. Insufficient primary and secondary school places.

Transport	Reduce the need to travel and promote more sustainable transport choices.	Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	+	Total score of 16.
		Sub-indicator: Distance to bus stop / rail station	+++	261m ACF from the centre of the site to the nearest bus stop.
		Sub-indicator: Frequency of Public Transport	-	Hourly Service
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	+	51 minutes from Over to Cambridge; 28 minutes from Over to St. Ives
		Sub-indicator: Distance for cycling to City Centre or Market Town	+	5.96km ACF from the centre of the site to St. Ives Market.
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	---	Access constraints - The proposed site does not appear to have a direct link to the adopted public highway. A14 capacity issues.
		Will it make the transport network safer for and promote use of non-motorised modes?	0	No impact.

Site No. Site 184
Address Land at Kettles Close, Oakington
Location Oakington
Category of site Group Village
Site area 0.6

Theme	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	+	The majority of the site is previously developed land comprising agricultural business and contracting, with part of the site covered in concrete and hardcore for trailer storage, but small site.
		Will it use land efficiently?		
		Will it protect and enhance the best and most versatile agricultural land?	0	Development would not affect best and most versatile agricultural land (Grades 1 and 2). Grade 3 land.
		Will it avoid the sterilisation of economic mineral reserves? Will it minimise the degradation/loss of soils due to new development?	0	Site not within an area designated in the Minerals and Waste LDF.
	Minimise waste production and support the reuse and recycling of waste products	Will it encourage reduction in household waste, and increase waste recovery and recycling?		
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	-	Development could impact on air quality, with minor negative impacts incapable of mitigation. A sewage pumping station is adjacent to the south western edge of the site - approximately half of the site is within Anglian Water's cordon sanitaire and will not be suitable for residential development.
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	0	Development compatible with neighbouring uses. Positive benefit for removal of contractors yard, but some minor to moderate additional off-site road traffic noise generation.
		Will it minimise, and where possible address, land contamination?	0	This site was previously a contractors yard. Potential for minor benefits through remediation of minor contamination
		Will it protect and where possible enhance the quality of the water environment?	0	Assumptions for a neutral impact are that appropriate standards and pollution control measures will be achieved through the development process, e.g. as part of Sustainable Drainage Systems (Suds).
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiversity?	0	No impact on protected sites and species (or impacts could be mitigated).
	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	0	Assumptions for a neutral impact are that existing features that warrant retention can be retained or appropriate mitigation will be achieved through the development process.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process.

Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	-	Minor Negative Impact (Development conflicts with landscape character, minor negative impacts incapable of mitigation) - Development of this site would create a further area of backland development that would not relate well to the largely linear character of the village.
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	-	Minor Negative Impact (development conflicts with townscape character, minor negative impacts incapable of mitigation) - Development of this site would create a further area of backland development that would not relate well to the largely linear character of the village.
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Archaeological potential will require further information but the assumption for a neutral impact is that it is likely appropriate mitigation can be achieved through the development process.
	Create places, spaces and buildings that work well, wear well and look good	Will it lead to developments built to a high standard of design and good place making that reflects local character?		
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	0	Standard requirements for renewables would apply.
		Will it promote energy efficiency?		
		Will it minimise contributions to climate change through sustainable construction practices?		
	Reduce vulnerability to future climate change effects	Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	---	Flood Zone 3 (or other form of flood risk incapable of appropriate mitigation) - the whole site is within Flood Zone 3a.
		Will it minimise the likely impacts of climate change on the development through appropriate design?		
Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?				
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?		
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?		

Inclusive Communities - Housing	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	0	Neutral impact (existing features retained or appropriate mitigation). Assumption is standard requirements for open space would apply.
	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?		
		Will it provide for housing for the ageing population?		
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	+++	The site would provide 5 or more pitches.
Inclusive Communities - Redressing inequalities and involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	-	Group Village
		Sub-Indicator: Distance to centre	+++	275m ACF to the Post Office, a central point in the village which is surrounded by other services and facilities.
		Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	0	No facilities lost, and no new facilities proposed directly as a result of the development.
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will improve relations between people from different backgrounds or social groups?		
		Will it redress inequalities?		
	Encourage and enable the active involvement of local people in community activities	Will it increase the ability of people to influence decisions, including 'hard to reach' groups?		
Will it encourage engagement with community activities?		0	No facilities lost, and no new facilities proposed directly as a result of the development.	

Economic Activity		Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	-	Development would have a minor negative effect on employment opportunities, as a result of the loss of existing employment land.
	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	Development would have no effect on vitality or viability of existing centres. The assumption is that the local centre proposed will only be of a suitable scale to serve needs of new residents and will not impact on other centres.
		Will it encourage the rural economy and diversification, and support sustainable tourism?		
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it contribute to providing a range of employment opportunities, in accessible locations?	+	17.55 minutes from site to nearest employment area with 2000+ employees. 10 employment areas with 2000+ employees that can be accessed in less than 30mins - 1.6km walk.
		Will it improve the level of investment in key community services and infrastructure, including broadband?	+	Minor Utilities Infrastructure improvements required, but constraints can be addressed. There is insufficient spare mains water capacity within the distribution zone to supply the number of proposed properties which could arise if all the SHLAA sites within the zone were to be developed. The WWTW is operating close to capacity and the sewerage network is at capacity and both will require mitigation.
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve access to education and training, and support provision of skilled employees to the economy?	+	Insufficient spare school capacity but potential for improvement to meet needs. Insufficient secondary school capacity.

Transport	Reduce the need to travel and promote more sustainable transport choices.	Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	+	Total score of 18.
		Sub-indicator: Distance to bus stop / rail station	+++	108m ACF from the centre of the site to the nearest bus stop.
		Sub-indicator: Frequency of Public Transport	+	20 Minute Service.
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	+	21 Minutes from Oakington to Cambridge.
		Sub-indicator: Distance for cycling to City Centre or Market Town	+	6.86km ACF from the centre of the site to Cambridge Market.
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	0	No capacity constraints identified, safe access can be achieved.
		Will it make the transport network safer for and promote use of non-motorised modes?	0	No impact.

Site No. Site 185
Address Land at Kettles Close, Oakington
Location Oakington
Category of site Group Village
Site area 0.6

Theme	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	+	The majority of the site is previously developed land comprising agricultural business and contracting, with part of the site covered in concrete and hardcore for trailer storage, but small site.
		Will it use land efficiently?		
		Will it protect and enhance the best and most versatile agricultural land?	0	Development would not affect best and most versatile agricultural land (Grades 1 and 2).
		Will it avoid the sterilisation of economic mineral reserves? Will it minimise the degradation/loss of soils due to new development?	0	Site not within an area designated in the Minerals and Waste LDF.
	Minimise waste production and support the reuse and recycling of waste products	Will it encourage reduction in household waste, and increase waste recovery and recycling?		
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	-	Development could impact on air quality, with minor negative impacts incapable of mitigation. A sewage pumping station is adjacent to the south western edge of the site - approximately half of the site is within Anglian Water's cordon sanitaire and will not be suitable for residential development.
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	0	Development compatible with neighbouring uses. Positive benefit for removal of contractors yard, but some minor to moderate additional off-site road traffic noise generation.
		Will it minimise, and where possible address, land contamination?	0	This site was previously a contractors yard. Potential for minor benefits through remediation of minor contamination
		Will it protect and where possible enhance the quality of the water environment?	0	Assumptions for a neutral impact are that appropriate standards and pollution control measures will be achieved through the development process, e.g. as part of Sustainable Drainage Systems (Suds).
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiversity?	0	No impact on protected sites and species (or impacts could be mitigated).
	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	0	Assumptions for a neutral impact are that existing features that warrant retention can be retained or appropriate mitigation will be achieved through the development process.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process.
	Maintain and enhance the diversity	Will it maintain and enhance the diversity and distinctiveness of landscape character?	-	Minor Negative Impact (Development conflicts with landscape character, minor negative impacts incapable of mitigation) - Development of this site would create a further area of backland development that would not relate well to the largely linear character of the village.

Landscape, Townscape and Cultural Heritage	and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of townscape character?	-	Minor Negative Impact (development conflicts with townscape character, minor negative impacts incapable of mitigation) - Development of this site would create a further area of backland development that would not relate well to the largely linear character of the village.
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Archaeological potential will require further information but the assumption for a neutral impact is that it is likely appropriate mitigation can be achieved through the development process.
	Create places, spaces and buildings that work well, wear well and look good	Will it lead to developments built to a high standard of design and good place making that reflects local character?		
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	0	Standard requirements for renewables would apply.
		Will it promote energy efficiency?		
		Will it minimise contributions to climate change through sustainable construction practices?		
	Reduce vulnerability to future climate change effects	Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	---	Flood Zone 3 (or other form of flood risk incapable of appropriate mitigation) - the whole site is within Flood Zone 3a.
		Will it minimise the likely impacts of climate change on the development through appropriate design?		
Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?				
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?		
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?		

Inclusive Communities - Housing	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	0	Neutral impact (existing features retained or appropriate mitigation). Assumption is standard requirements for open space would apply.
	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?		
		Will it provide for housing for the ageing population?		
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	No effect on pitch or plot provision.
Inclusive Communities - Redressing inequalities and involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	-	Group Village
		Sub-Indicator: Distance to centre	+++	275m ACF to the Post Office, a central point in the village which is surrounded by other services and facilities.
		Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	0	No facilities lost, and no new facilities proposed directly as a result of the development.
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will improve relations between people from different backgrounds or social groups?		
		Will it redress inequalities?		
	Encourage and enable the active involvement of local people in community activities	Will it increase the ability of people to influence decisions, including 'hard to reach' groups?		
Will it encourage engagement with community activities?		0	No facilities lost, and no new facilities proposed directly as a result of the development.	

Economic Activity		Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	-	Development would have a minor negative effect on employment opportunities, as a result of the loss of existing employment land.
	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	Development would have no effect on vitality or viability of existing centres. The assumption is that the local centre proposed will only be of a suitable scale to serve needs of new residents and will not impact on other centres.
		Will it encourage the rural economy and diversification, and support sustainable tourism?		
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it contribute to providing a range of employment opportunities, in accessible locations?	+	17.55 minutes from site to nearest employment area with 2000+ employees. 10 employment areas with 2000+ employees that can be accessed in less than 30mins - 1.6km walk.
		Will it improve the level of investment in key community services and infrastructure, including broadband?	+	Minor Utilities Infrastructure improvements required, but constraints can be addressed. There is insufficient spare mains water capacity within the distribution zone to supply the number of proposed properties which could arise if all the SHLAA sites within the zone were to be developed. The WWTW is operating close to capacity and the sewerage network is at capacity and both will require mitigation.
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve access to education and training, and support provision of skilled employees to the economy?	+	Insufficient spare school capacity but potential for improvement to meet needs. Insufficient secondary school capacity.

Transport	Reduce the need to travel and promote more sustainable transport choices.	Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	+	Total score of 18.
		Sub-indicator: Distance to bus stop / rail station	+++	108m ACF from the centre of the site to the nearest bus stop.
		Sub-indicator: Frequency of Public Transport	+	20 Minute Service.
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	+	21 Minutes from Oakington to Cambridge.
		Sub-indicator: Distance for cycling to City Centre or Market Town	+	6.86km ACF from the centre of the site to Cambridge Market.
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	0	No capacity constraints identified, safe access can be achieved.
		Will it make the transport network safer for and promote use of non-motorised modes?	0	No impact.

Site No. Site 186
Address Granta Terrace, Stapleford
Location Great Shelford & Stapleford
Category of site Rural Centre
Site area 1.63

Theme	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	+++	The majority of the site is previously developed land in commercial use consisting of a mix of large and smaller scale buildings.
		Will it use land efficiently?		
		Will it protect and enhance the best and most versatile agricultural land?	0	Development would not affect best and most versatile agricultural land (Grades 1 and 2).
		Will it avoid the sterilisation of economic mineral reserves? Will it minimise the degradation/loss of soils due to new development?	0	Site not within an area designated in the Minerals and Waste LDF. On the southern boundary there is a very small part of the site within a minerals safeguarding area for sand and gravel.
	Minimise waste production and support the reuse and recycling of waste products	Will it encourage reduction in household waste, and increase waste recovery and recycling?		
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	0	Development unlikely to impact on air quality. Site lies in an area where air quality acceptable.
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	--- / -	Could create significant negative impacts to, or as a result of, the development, with negative impacts incapable of mitigation. Site adjoins medium to large scale industrial type units including wood working joinery and an operational railway line.
		Will it minimise, and where possible address, land contamination?	+	The site is in industrial/ commercial use so may have contaminated land. Potential for minor benefits through remediation of minor contamination
		Will it protect and where possible enhance the quality of the water environment?	0	Development unlikely to affect water quality. Assumptions for a neutral impact are that appropriate standards and pollution control measures will be achieved through the development process. e.g. as part of Sustainable Drainage Systems (Suds).
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiversity?	0	No impact on protected sites and species (or impacts could be mitigated).
	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	0	Assumptions for a neutral impact are that existing features that warrant retention can be retained or appropriate mitigation will be achieved through the development process.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process.

Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	0	Neutral impact (generally compatible, or capable of being made compatible with local landscape character). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process.
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	+	Minor Positive Impact (Development would relate to local townscape character and offer opportunities for enhancement) - Site is in commercial uses with residential adjoining to the east and north. Development of site would offer opportunity to enhance townscape.
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Archaeological potential will require further information but the assumption for a neutral impact is that it is likely appropriate mitigation can be achieved through the development process. Impact on setting of Conservation Area in views to site from south across open countryside and river.
	Create places, spaces and buildings that work well, wear well and look good	Will it lead to developments built to a high standard of design and good place making that reflects local character?		
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	0	Standard requirements for renewables would apply.
		Will it promote energy efficiency?		
		Will it minimise contributions to climate change through sustainable construction practices?		
	Reduce vulnerability to future climate change effects	Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	0	Flood Zone 1 and no drainage issues that cannot be appropriately addressed
		Will it minimise the likely impacts of climate change on the development through appropriate design?		
		Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?		
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?		
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?		

Inclusive Communities - Housing	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	0	Neutral impact (existing features retained or appropriate mitigation).
	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?		
		Will it provide for housing for the ageing population?		
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	No effect on pitch or plot provision.
Inclusive Communities - Redressing inequalities and involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	+	Rural Centre
		Sub-Indicator: Distance to centre	+	657m ACF to Woollards Lane, Stapleford which is surrounded by a large number of services and facilities.
		Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	0	No facilities lost, and no new facilities proposed directly as a result of the development.
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will improve relations between people from different backgrounds or social groups?		
		Will it redress inequalities?		
		Will it increase the ability of people to influence decisions, including 'hard to reach' groups?		
	Encourage and enable the active involvement of local people in community activities	Will it encourage engagement with community activities?	0	No facilities lost, and no new facilities proposed directly as a result of the development.

Economic Activity		Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	---	Development would have significant negative effect on employment opportunities, as a result of the loss of existing employment land.
	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	Development would have no effect on vitality or viability of existing centres. The indicator is likely to apply particularly to sites which include retail, offices, or leisure uses.
		Will it encourage the rural economy and diversification, and support sustainable tourism?		
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it contribute to providing a range of employment opportunities, in accessible locations?	+	21.70 minutes from site to nearest employment area with 2000+ employees. 5 employment areas with 2000+ employees that can be accessed in less than 30mins - 1.6km walk.
		Will it improve the level of investment in key community services and infrastructure, including broadband?	+	Minor Utilities Infrastructure improvements required, but constraints can be addressed. There is insufficient spare mains water capacity within the distribution zone to supply the number of proposed properties which could arise if all the SHLAA sites within the zone were to be developed. The sewage network is approaching capacity.
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve access to education and training, and support provision of skilled employees to the economy?	-	School capacity not sufficient, but significant issues can be adequately addressed

Transport		Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	+	Total score of 17
	Reduce the need to travel and promote more sustainable transport choices.	Sub-indicator: Distance to bus stop / rail station	+++	190m ACF from the centre of the site to nearest bus stop.
		Sub-indicator: Frequency of Public Transport	+	20 minute service.
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	0	Citi 7 bus service takes 36 minutes from Shelford to Cambridge.
		Sub-indicator: Distance for cycling to City Centre or Market Town	+	7.03km ACF from the centre of the site to Cambridge Market.
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	0	No capacity constraints identified, safe access can be achieved.
		Will it make the transport network safer for and promote use of non-motorised modes?	0	The Highway Authority will require new development to provide or contribute to the provision of infrastructure to encourage more sustainable transport links both on and off site. Provision or contribution from this site would result in minor improvement to public transport, walking or cycling facilities.

Site No. Site 187
Address 29 - 35 and 32 London Road, Great Shelford
Location Great Shelford & Stapleford
Category of site Rural Centre
Site area 0.55

Theme	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	+++	Approximately 70% of the site is previously developed land including a garage for car sales and maintenance and customer car parking.
		Will it use land efficiently?		
		Will it protect and enhance the best and most versatile agricultural land?	0	Development would not affect the best and most versatile agricultural land (Grades 1 and 2).
		Will it avoid the sterilisation of economic mineral reserves? Will it minimise the degradation/loss of soils due to new development?	0	Site not within an area designated in the Minerals and Waste LDF.
	Minimise waste production and support the reuse and recycling of waste products	Will it encourage reduction in household waste, and increase waste recovery and recycling?		
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	0	Development unlikely to impact on air quality. Site lies in an area where air quality acceptable.
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	+ /+++	Development would remove a garage for car sales and maintenance and customer car parking. Residential development would result in significant improvements in the local noise climate and the living environment of existing residential premises. Noise from London Road can be mitigated.
		Will it minimise, and where possible address, land contamination?	0/+	The site would require investigation due to its existing industrial / commercial use. Potential for minor benefits through remediation of minor contamination.
		Will it protect and where possible enhance the quality of the water environment?	0	Development unlikely to effect water quality. Assumptions for a neutral impact are that appropriate standards and pollution control measures will be achieved through the development process, e.g. as part of Sustainable Drainage Systems (SuDS).
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiversity?	0	No impact on protected sites and species (or impacts could be mitigated).
	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	0/+	Assumptions for a neutral impact are that existing features that warrant retention can be retained or appropriate mitigation will be achieved through the development process. Development of this site would result in the removal of scrub habitats which may be locally important for nesting birds in an otherwise built-up area, therefore the site would benefit from tree planting and hedgerows.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process.

Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	0	Neutral impact (generally compatible, or capable of being made compatible with local landscape character). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process.
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	+	Minor positive impact (development would relate to local townscape character and offer opportunities for enhancement) - development of the site allows for possible enhancement of the townscape with development of similar form, spacing and landscaping to neighbouring uses.
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	0/+	Minor positive impact on historic assets – the site is part of the setting of the Great Shelford Conservation Area and development of the site could result in possible enhancement of the area with development of similar form, spacing and landscaping to neighbouring houses. Archaeological potential will require further information but the assumption for a neutral impact is that it is likely appropriate mitigation can be achieved through the development process.
	Create places, spaces and buildings that work well, wear well and look good	Will it lead to developments built to a high standard of design and good place making that reflects local character?		
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	0	Standard requirements for renewables would apply.
		Will it promote energy efficiency?		
		Will it minimise contributions to climate change through sustainable construction practices?		
	Reduce vulnerability to future climate change effects	Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	0	Flood Zone 1 and no drainage issues that cannot be appropriately addressed.
		Will it minimise the likely impacts of climate change on the development through appropriate design?		
Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?				
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?		
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?		

Inclusive Communities - Housing	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	0	Neutral impact (existing features retained or appropriate mitigation).
	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?		
		Will it provide for housing for the ageing population?		
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	No effect on pitch or plot provision.
Inclusive Communities - Redressing inequalities and involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	+	Rural Centre.
		Sub-Indicator: Distance to centre	+	555m ACF to Woollards Lane which is surrounded by a large number of services and facilities.
		Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	0	No facilities lost, and no new facilities proposed directly as a result of the development.
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will improve relations between people from different backgrounds or social groups?		
		Will it redress inequalities?		
		Will it increase the ability of people to influence decisions, including 'hard to reach' groups?		
	Encourage and enable the active involvement of local people in community activities	Will it encourage engagement with community activities?	0	No facilities lost, and no new facilities proposed directly as a result of the development.

Economic Activity		Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	-	Development would have a minor negative effect on employment opportunities, as a result of the loss of existing employment land.
	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	Development would have no effect on vitality or viability of existing centres. The indicator is likely to apply particularly to sites which include retail, offices, or leisure uses.
		Will it encourage the rural economy and diversification, and support sustainable tourism?		
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it contribute to providing a range of employment opportunities, in accessible locations?	+	18.79 minutes from site to nearest employment area with 2000+ employees. 6 employment areas with 2000+ employees that can be accessed in less than 30mins - 1.6km walk.
		Will it improve the level of investment in key community services and infrastructure, including broadband?	+	Minor utilities infrastructure improvements required, but constraints can be addressed. There is insufficient spare mains water capacity within the distribution zone to supply the number of proposed properties which could arise if all the SHLAA sites within the zone were to be developed. The sewerage network is approaching capacity.
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve access to education and training, and support provision of skilled employees to the economy?	-	School capacity not sufficient, but significant issues can be adequately addressed.

Transport	Reduce the need to travel and promote more sustainable transport choices.	Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	+	Total score of 17.
		Sub-indicator: Distance to bus stop / rail station	+++	0m ACF from the centre of the site to nearest bus stop (Citi 7). 440m ACF from the centre of the site to train station.
		Sub-indicator: Frequency of Public Transport	+	Bus has a 20 minute service. Train has an 30 minute to hourly service.
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	0	Bus service takes 33 minutes from Great Shelford to Cambridge. Train service takes 5-11 minutes from Great Shelford to Cambridge.
		Sub-indicator: Distance for cycling to City Centre or Market Town	+	6.82km ACF from the centre of the site to Cambridge Market.
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	0	No capacity constraints identified, safe access can be achieved.
		Will it make the transport network safer for and promote use of non-motorised modes?	+	The Highway Authority will require new development to provide or contribute to the provision of infrastructure to encourage more sustainable transport links both on and off site. Provision or contribution from this site would result in minor improvement to public transport, walking or cycling facilities.

Site No. Site 188

Address Land south of Great Shelford Caravan and Camping Club, Cambridge Road, Great Shelford

Location Great Shelford & Stapleford

Category of site Rural Centre

Site area 1.8

Theme	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	0	A small proportion of the site is previously developed land including a dwelling and land used for the storage of caravans.
		Will it use land efficiently?		
		Will it protect and enhance the best and most versatile agricultural land?	-	Minor loss of best and most versatile agricultural land (Grades 1 and 2) - small site including Grade 2.
	Minimise waste production and support the reuse and recycling of waste products	Will it avoid the sterilisation of economic mineral reserves? Will it minimise the degradation/loss of soils due to new development?	0	Site not within an area designated in the Minerals and Waste LDF.
Will it encourage reduction in household waste, and increase waste recovery and recycling?				
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	0	Development unlikely to impact on air quality. Site lies in an area where air quality acceptable.
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	0/-	Development compatible with neighbouring uses, some possible issues with noise from adjoining commercial / industrial site that may require offsite mitigation. Some minor to moderate additional road traffic noise generation impact on existing residential due to development related car movements.
		Will it minimise, and where possible address, land contamination?	0/+	The site would require investigation due to its existing agricultural / commercial uses. Potential for minor benefits through remediation of minor contamination.
		Will it protect and where possible enhance the quality of the water environment?	0	Development unlikely to effect water quality. Assumptions for a neutral impact are that appropriate standards and pollution control measures will be achieved through the development process, e.g. as part of Sustainable Drainage Systems (SuDS).
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiversity?	0	No impact on protected sites and species (or impacts could be mitigated).
	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	+	Minor positive impact as there are some opportunities for enhancement and new features, including the planting of small copses and extending hedgerows into the site.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process.

Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	-	Minor negative impact (development conflicts with landscape character, minor negative impacts incapable of mitigation) - development of this site would result in further encroachment of the built area into the transitional area of enclosed fields that provide a softer edge to the village.
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	---	Significant Negative Impact (development conflicts with townscape character, with significant negative impacts incapable of mitigation) - development of this site would create development contrary to the ribbon development character of this part of the village.
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Archaeological potential will require further information but the assumption for a neutral impact is that it is likely appropriate mitigation can be achieved through the development process.
	Create places, spaces and buildings that work well, wear well and look good	Will it lead to developments built to a high standard of design and good place making that reflects local character?		
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	0	Standard requirements for renewables would apply.
		Will it promote energy efficiency?		
		Will it minimise contributions to climate change through sustainable construction practices?		
	Reduce vulnerability to future climate change effects	Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	0	Flood Zone 1 and no drainage issues that cannot be appropriately addressed.
		Will it minimise the likely impacts of climate change on the development through appropriate design?		
Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?				
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?		
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?		

Inclusive Communities - Housing	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	+/0	Development would create minor opportunities for new public open space.
	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?		
		Will it provide for housing for the ageing population?		
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	No effect on pitch or plot provision.
Inclusive Communities - Redressing inequalities and involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	+	Rural Centre.
		Sub-Indicator: Distance to centre	---	1,333m ACF to Trumpington district centre, Cambridge.
		Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	0	No facilities lost, and no new facilities proposed directly as a result of the development.
		Will improve relations between people from different backgrounds or social groups?		
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will it redress inequalities?		
		Will it increase the ability of people to influence decisions, including 'hard to reach' groups?		
Encourage and enable the active involvement of local people in community activities	Will it encourage engagement with community activities?	0	No facilities lost, and no new facilities proposed directly as a result of the development.	

Economic Activity		Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	0	Development would have no effect on employment land or premises.
	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	Development would have no effect on vitality or viability of existing centres. The indicator is likely to apply particularly to sites which include retail, offices, or leisure uses.
		Will it encourage the rural economy and diversification, and support sustainable tourism?		
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it contribute to providing a range of employment opportunities, in accessible locations?	+	16.50 minutes from site to nearest employment area with 2000+ employees. 6 employment areas with 2000+ employees that can be accessed in less than 30mins - 1.6km walk.
		Will it improve the level of investment in key community services and infrastructure, including broadband?	+	Minor utilities infrastructure improvements required, but constraints can be addressed. There is insufficient spare mains water capacity within the distribution zone to supply the number of proposed properties which could arise if all the SHLAA sites within the zone were to be developed. The sewerage network is approaching capacity.
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve access to education and training, and support provision of skilled employees to the economy?	-	School capacity not sufficient, but significant issues can be adequately addressed.

Transport	Reduce the need to travel and promote more sustainable transport choices.	Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	+	Total score of 19.
		Sub-indicator: Distance to bus stop / rail station	+++	229m ACF from the centre of the site to nearest bus stop (Citi 7). 1,913m ACF from the centre of the site to train station.
		Sub-indicator: Frequency of Public Transport	+	Bus has a 20 minute service. Train has an 30 minute to hourly service.
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	0	Bus service takes 33 minutes from Great Shelford to Cambridge. Train service takes 5-11 minutes from Great Shelford to Cambridge.
		Sub-indicator: Distance for cycling to City Centre or Market Town	+++	4.63km ACF from the centre of the site to Cambridge Market.
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	-/-	Minor negative effects incapable of mitigation. Access constraints - the proposed site does not appear to have a direct link to the adopted public highway and the access link to the public highway is unsuitable to serve the number of units that are being proposed.
		Will it make the transport network safer for and promote use of non-motorised modes?	0	No impact.

Site No. Site 189
Address Land to the west of Cody Road, Waterbeach
Location Waterbeach
Category of site Minor Rural Centre
Site area 1.86

Theme	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	0	No previously developed land.
		Will it use land efficiently?		
		Will it protect and enhance the best and most versatile agricultural land?	-	Minor loss of best and most versatile agricultural land (Grades 1 and 2) - small site but all Grade 2.
	Minimise waste production and support the reuse and recycling of waste products	Will it avoid the sterilisation of economic mineral reserves? Will it minimise the degradation/loss of soils due to new development?	0	A large proportion of the site is within an area designated in the Minerals and Waste LDF but development would not have a negative impact.
Will it encourage reduction in household waste, and increase waste recovery and recycling?				
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	0	Development unlikely to impact on air quality. Site lies in an area where air quality acceptable.
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	-	Development compatible with neighbouring uses. Some minor to moderate additional road traffic noise generation impact on existing residential due to development related car movements but dependent on location of site entrance.
		Will it minimise, and where possible address, land contamination?	0	Development not on land likely to be contaminated.
		Will it protect and where possible enhance the quality of the water environment?	0	Assumptions for a neutral impact are that appropriate standards and pollution control measures will be achieved through the development process, e.g. as part of Sustainable Drainage Systems (Suds). A majority of the development sites falls within the Waterbeach Level Internal Drainage District, which does not have any capacity to accept any direct discharge into its system above the green field run off rate. All surface water from the site would have to be balanced before it is released into the Board's system. We also have main drains adjacent to the site, therefore any works involving these drains would require the consent of the Board.
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiversity?	0	No impact on protected sites and species (or impacts could be mitigated). There are protected trees located 60m to the south.
	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	0	Assumptions for a neutral impact are that existing features that warrant retention can be retained or appropriate mitigation will be achieved through the development process.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process.

Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	-	Minor Negative Impact (Development conflicts with landscape character, minor negative impacts incapable of mitigation) - There is a very clear boundary to the village to the west and south of the site. The site is located in a relatively open area separating the village from the Barracks to the north. It is in agricultural use and this, together with the open land to the east, creates a rural character and the appearance of the countryside entering the village. If this site were developed it would intrude into the rural separation area between Waterbeach and the Barracks.
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	-	Minor Negative Impact (development conflicts with townscape character, minor negative impacts incapable of mitigation) - There is a very clear boundary to the village to the west and south of the site. The site is located in a relatively open area separating the village from the Barracks to the north. It is in agricultural use and this, together with the open land to the east, creates a rural character and the appearance of the countryside entering the village. If this site were developed it would intrude into the rural separation area between Waterbeach and the Barracks.
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	0	Neutral impact (existing features retained, or appropriate mitigation possible). The site is located to the east of the historic village core and to the north of the site of nationally important Waterbeach Abbey. The tower of St John's Church provides a distinctive landmark within Waterbeach, being visible from many viewpoints to the east and south of the village. Archaeological potential will require further information but the assumption for a neutral impact is that it is likely appropriate mitigation can be achieved through the development process.
	Create places, spaces and buildings that work well, wear well and look good	Will it lead to developments built to a high standard of design and good place making that reflects local character?		
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	0	Standard requirements for renewables would apply.
		Will it promote energy efficiency?		
		Will it minimise contributions to climate change through sustainable construction practices?		
	Reduce vulnerability to future climate change effects	Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	0	Flood Zone 1 and no drainage issues that cannot be appropriately addressed.
		Will it minimise the likely impacts of climate change on the development through appropriate design?		
	Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?			
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?		
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?		
	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	0	Neutral impact (existing features retained or appropriate mitigation). Assumption is standard requirements for open space would apply.

Inclusive Communities - Housing	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?		
		Will it provide for housing for the ageing population?		
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	No effect on pitch or plot provision.
Inclusive Communities - Redressing Inequalities and Involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	0	Minor Rural Centre
		Sub-Indicator: Distance to centre	0	723m from the centre of the site to a point along Chapel Street. Services and facilities clustered around surrounding area.
		Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	0	No facilities lost, and no new facilities proposed directly as a result of the development.
		Will improve relations between people from different backgrounds or social groups?		
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will it redress inequalities?		
		Will it increase the ability of people to influence decisions, including 'hard to reach' groups?		
Encourage and enable the active involvement of local people in community activities	Will it encourage engagement with community activities?	0	No facilities lost, and no new facilities proposed directly as a result of the development.	

Economic Activity		Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	0	Development would have no effect on employment land or premises.
	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	Development would have no effect on vitality or viability of existing centres. The indicator is likely to apply particularly to sites which include retail, offices, or leisure uses.
		Will it encourage the rural economy and diversification, and support sustainable tourism?		
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it contribute to providing a range of employment opportunities, in accessible locations?	+	22.39 minutes from site to nearest employment area with 2000+ employees. 6 employment areas with 2000+ employees that can be accessed in less than 30mins - 1.6km walk.
		Will it improve the level of investment in key community services and infrastructure, including broadband?	+++ / +	Development can use existing capacity in utilities infrastructure. However, there is insufficient spare mains water capacity within the distribution zone to supply the number of proposed properties which could arise if all the SHLAA sites within the zone were to be developed. The sewerage network is approaching capacity and will require investigation and possibly mitigation.
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve access to education and training, and support provision of skilled employees to the economy?	- / ---	Insufficient spare school capacity but potential for improvement to meet needs. Insufficient primary and secondary school capacity.

Transport	Reduce the need to travel and promote more sustainable transport choices.	Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	+	Total score of 16.
		Sub-indicator: Distance to bus stop / rail station	+++	96m ACF from the centre of the site to the nearest bus stop (196 service). 338m ACF from the centre of the site to the nearest bus stop (9 service).
		Sub-indicator: Frequency of Public Transport	-	196 service - less than hourly. 9 service - Hourly service.
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	+	196 service - 44 Minutes from Waterbeach to Cambridge. 9 service - 25 Minutes from Waterbeach to Cambridge.
		Sub-indicator: Distance for cycling to City Centre or Market Town	+	9.01km ACF from the centre of the site to Cambridge Market.
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	0	No capacity constraints identified, safe access can be achieved. On the whole, the in-fill sites are less likely to present an unacceptable pressure on the A14 given the majority of travel demand will be focused on Cambridge and credible alternatives to car travel could be available.
		Will it make the transport network safer for and promote use of non-motorised modes?	+	The Highway Authority will require new development to provide or contribute to the provision of infrastructure to encourage more sustainable transport links both on and off site. Provision or contribution from this site would result in minor improvement to public transport, walking or cycling facilities.

Site No. Site 190
Address Land adjacent to Pieces Lane, Waterbeach
Location Waterbeach
Category of site Minor Rural Centre
Site area 1.78

Theme	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	0	No previously developed land.
		Will it use land efficiently?		
		Will it protect and enhance the best and most versatile agricultural land?	0	Development would not affect best and most versatile agricultural land (Grades 1 and 2).
		Will it avoid the sterilisation of economic mineral reserves? Will it minimise the degradation/loss of soils due to new development?	0	Site not within an area designated in the Minerals and Waste LDF.
	Minimise waste production and support the reuse and recycling of waste products	Will it encourage reduction in household waste, and increase waste recovery and recycling?		
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	0	Development unlikely to impact on air quality. Site lies in an area where air quality acceptable.
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	-	Development compatible with neighbouring uses. Some minor to moderate additional road traffic noise generation impact on existing residential due to development related car movements but dependent on location of site entrance.
		Will it minimise, and where possible address, land contamination?	0	Development not on land likely to be contaminated
		Will it protect and where possible enhance the quality of the water environment?	0	Assumptions for a neutral impact are that appropriate standards and pollution control measures will be achieved through the development process, e.g. as part of Sustainable Drainage Systems (Suds). A majority of the development sites falls within the Waterbeach Level Internal Drainage District, which does not have any capacity to accept any direct discharge into its system above the green field run off rate. All surface water from the site would have to be balanced before it is released into the Boards system. We also have main drains adjacent to the site, therefore any works involving these drains would require the consent of the Board.

Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiversity?	0	No impact on protected sites and species (or impacts could be mitigated). There are protected trees situated approximately 55m to the west of the site.
	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	0 / -	Assumptions for a neutral impact are that existing features that warrant retention can be retained or appropriate mitigation will be achieved through the development process. The site is in a substantial area of woodland and grassland which may result in some habitat loss.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process. A footpath runs to the south east on the opposite site of the railway line and it may be possible to provide a link to this.
Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	-	Minor Negative Impact (Development conflicts with landscape character, minor negative impacts incapable of mitigation) - The built up edge of Waterbeach is clearly defined to the west of the site. The site, particularly the northern part of the site, does not relate well to the village but to the treed land that opens out to the east onto the adjoining flat agricultural fields. The site has a rural character and creates a soft edge to the village. The presence of the railway line to the east does not mean that the village should automatically expand outwards towards it. Development would be detrimental to the rural character and setting of this part of the village.
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	-	Minor Negative Impact (development conflicts with townscape character, minor negative impacts incapable of mitigation) - The built up edge of Waterbeach is clearly defined to the west of the site. The site, particularly the northern part of the site, does not relate well to the village but to the treed land that opens out to the east onto the adjoining flat agricultural fields. The site has a rural character and creates a soft edge to the village. The presence of the railway line to the east does not mean that the village should automatically expand outwards towards it. Development would be detrimental to the rural character and setting of this part of the village.
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	---	Significant Negative Impact on historic Assets (incapable of satisfactory mitigation) - The site is located to the east of the historic village core and to the north of the site of nationally important Waterbeach Abbey. The tower of St John's Church provides a distinctive landmark within Waterbeach, being visible from many viewpoints to the east and south of the village. Site forms an important part of the setting of a Grade II Listed and adverse impact due to loss of wooded and open green backdrop and streetscape. Archaeological potential will require further information but the assumption for a neutral impact is that it is likely appropriate mitigation can be achieved through the development process.
	Create places, spaces and buildings that work well, wear well and look good	Will it lead to developments built to a high standard of design and good place making that reflects local character?		

Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	0	Standard requirements for renewables would apply.
		Will it promote energy efficiency?		
		Will it minimise contributions to climate change through sustainable construction practices?		
	Reduce vulnerability to future climate change effects	Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	0	Flood Zone 1 and no drainage issues that cannot be appropriately addressed.
		Will it minimise the likely impacts of climate change on the development through appropriate design?		
		Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?		
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?		
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?		
Inclusive Communities - Housing	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	0	Neutral impact (existing features retained or appropriate mitigation). Assumption is standard requirements for open space would apply.
	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?		
		Will it provide for housing for the ageing population?		
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	No effect on pitch or plot provision.

Inclusive Communities - Redressing Inequalities and Involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	0	Minor Rural Centre
		Sub-Indicator: Distance to centre	+	462m from the centre of the site to a point along Chapel Street. Services and facilities clustered around surrounding area.
		Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	0	No facilities lost, and no new facilities proposed directly as a result of the development.
		Will improve relations between people from different backgrounds or social groups?		
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will it redress inequalities?		
		Will it increase the ability of people to influence decisions, including 'hard to reach' groups?		
	Encourage and enable the active involvement of local people in community activities	Will it encourage engagement with community activities?	0	No facilities lost, and no new facilities proposed directly as a result of the development.

Economic Activity		Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	0	Development would have no effect on employment land or premises.
	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	Development would have no effect on vitality or viability of existing centres. The indicator is likely to apply particularly to sites which include retail, offices, or leisure uses.
		Will it encourage the rural economy and diversification, and support sustainable tourism?		
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it contribute to providing a range of employment opportunities, in accessible locations?	+	21.72 minutes from site to nearest employment area with 2000+ employees. 9 employment areas with 2000+ employees that can be accessed in less than 30mins - 1.6km walk.
		Will it improve the level of investment in key community services and infrastructure, including broadband?	+++ / +	Development can use existing capacity in utilities infrastructure. However, there is insufficient spare mains water capacity within the distribution zone to supply the number of proposed properties which could arise if all the SHLAA sites within the zone were to be developed. The sewerage network is approaching capacity and will require investigation and possibly mitigation.
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve access to education and training, and support provision of skilled employees to the economy?	- / ---	Insufficient spare school capacity but potential for improvement to meet needs. Insufficient primary and secondary school capacity.

Transport	Reduce the need to travel and promote more sustainable transport choices.	Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	0	Total score of 14.
		Sub-indicator: Distance to bus stop / rail station	+	437m ACF from the centre of the site to the nearest bus stop (196 service). 457m ACF from the centre of the site to the nearest bus stop (9 service).
		Sub-indicator: Frequency of Public Transport	-	196 service - less than hourly. 9 service - Hourly service.
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	+	196 service - 44 Minutes from Waterbeach to Cambridge. 9 service - 25 Minutes from Waterbeach to Cambridge.
		Sub-indicator: Distance for cycling to City Centre or Market Town	+	8.71km ACF from the centre of the site to Cambridge Market.
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	--- / -	Minor negative effects incapable of mitigation. Access constraints - The access link to the public highway is unsuitable to serve the number of units that are being proposed. On the whole, the in-fill sites are less likely to present an unacceptable pressure on the A14 given the majority of travel demand will be focused on Cambridge and credible alternatives to car travel could be available.
		Will it make the transport network safer for and promote use of non-motorised modes?	0	No impact.

Site No. Site 191
Address Land adjacent to Whitecroft Road, Meldreth
Location Meldreth
Category of site Group Village
Site area 0.67

Theme	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	+	Approximately 1/2 of the site is previously developed land - industrial and commercial premises.
		Will it use land efficiently?		
		Will it protect and enhance the best and most versatile agricultural land?	-	Minor loss of best and most versatile agricultural land (Grades 1 and 2) - Grade 2.
		Will it avoid the sterilisation of economic mineral reserves? Will it minimise the degradation/loss of soils due to new development?	0	Site not within an area designated in the Minerals and Waste LDF.
	Minimise waste production and support the reuse and recycling of waste products	Will it encourage reduction in household waste, and increase waste recovery and recycling?		
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	0	Development unlikely to impact on air quality. Site lies in an area where air quality acceptable.
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	---	Development for residential would have significant negative impacts from neighbouring industrial / commercial uses incapable of adequate mitigation. Close to railway line and main road which also generate noise.
		Will it minimise, and where possible address, land contamination?	+	Potential for minor benefits through remediation of minor contamination. Record of commercial/industrial use, can be conditioned
		Will it protect and where possible enhance the quality of the water environment?	0	Development unlikely to affect water quality. Assumptions for a neutral impact are that appropriate standards and pollution control measures will be achieved through the development process and will mitigate any impact on groundwater.
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiversity?	0	No impact on protected sites and species (or impacts could be mitigated).
	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	0	Assumptions for a neutral impact are that existing features that warrant retention can be retained or appropriate mitigation will be achieved through the development process.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process.

Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	+	This site lies adjacent to the southern gateway to the village, the pre-fabricated buildings on it are highly visible and create a harsh edge to the southern approach to the village. Development of this site could have a beneficial effect on the landscape setting of Meldreth subject to the design and landscaping of any replacement development.
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	+	This site lies adjacent to the southern gateway to the village, the pre-fabricated buildings on it are highly visible and create a harsh edge to the southern approach to the village. Development of this site could have a beneficial effect on the townscape of Meldreth subject to the design and landscaping of any replacement development.
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Archaeological potential will require further information but the assumption for a neutral impact is that it is likely appropriate mitigation can be achieved through the development process.
	Create places, spaces and buildings that work well, wear well and look good	Will it lead to developments built to a high standard of design and good place making that reflects local character?		
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	0	Standard requirements for renewables would apply.
		Will it promote energy efficiency?		
		Will it minimise contributions to climate change through sustainable construction practices?		
	Reduce vulnerability to future climate change effects	Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	0	Flood Zone 1 and no drainage issues that cannot be appropriately addressed.
		Will it minimise the likely impacts of climate change on the development through appropriate design?		
		Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?		
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?		
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?		

Inclusive Communities - Housing	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	0	Neutral impact (existing features retained or appropriate mitigation).
	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?		
		Will it provide for housing for the ageing population?		
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	No effect on pitch or plot provision.
Inclusive Communities - Redressing inequalities and involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	-	Group Village
		Sub-Indicator: Distance to centre	+	479m from the centre of the site to the village hall which is surrounded by a cluster of other services and facilities.
		Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	0	No facilities lost, and no new facilities proposed directly as a result of the development.
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will improve relations between people from different backgrounds or social groups?		
		Will it redress inequalities?		
		Will it increase the ability of people to influence decisions, including 'hard to reach' groups?		
	Encourage and enable the active involvement of local people in community activities	Will it encourage engagement with community activities?	0	No facilities lost, and no new facilities proposed directly as a result of the development.

Economic Activity		Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	0	Development would have no effect on employment land or premises.
	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	Development would have no effect on vitality or viability of existing centres. The indicator is likely to apply particularly to sites which include retail, offices, or leisure uses.
		Will it encourage the rural economy and diversification, and support sustainable tourism?		
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it contribute to providing a range of employment opportunities, in accessible locations?	+++	11.64 minutes from site to nearest employment area with 2000+ employees. 4 employment areas with 2000+ employees can be accessed in less than 30mins - 1.6km walk.
		Will it improve the level of investment in key community services and infrastructure, including broadband?	-	Minor Utilities Infrastructure improvements required, but constraints can be addressed. There is insufficient spare mains water capacity within the distribution zone to supply the number of proposed properties which could arise if all the SHLAA sites within the zone were to be developed. The WWTW is operating close to capacity and the sewerage network is at capacity and both will require mitigation.
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve access to education and training, and support provision of skilled employees to the economy?	-	School capacity not sufficient, but significant issues can be adequately addressed.

Transport	Reduce the need to travel and promote more sustainable transport choices.	Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	+	Total score of 18.
		Sub-indicator: Distance to bus stop / rail station	+++	94m ACF from the centre of the site to the nearest bus stop. 194m ACF from the centre of the site to the nearest train station.
		Sub-indicator: Frequency of Public Transport	-	Bus - less than hourly service. Train - hourly service.
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	+++	Bus - 15 minutes from Meldreth to Royston. Train - 4 minutes from Meldreth to Royston.
		Sub-indicator: Distance for cycling to City Centre or Market Town	+	5.22km ACF from the centre of the site to Royston Market.
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	0	No capacity constraints identified, safe access can be achieved.
		Will it make the transport network safer for and promote use of non-motorised modes?	0	No impact

Site No. Site 192
Address Land to the east of The Lane, Hauxton
Location Hauxton
Category of site Group Village
Site area 7.7

Theme	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	0	No previously developed land.
		Will it use land efficiently?		
		Will it protect and enhance the best and most versatile agricultural land?	-	Minor loss of best and most versatile agricultural land (Grades 1 and 2) - small site but half Grade 2 (7.7 ha.).
		Will it avoid the sterilisation of economic mineral reserves? Will it minimise the degradation/loss of soils due to new development?	0	Almost all the site is within an area designated in the Minerals and Waste LDF but development would not have a negative impact.
	Minimise waste production and support the reuse and recycling of waste products	Will it encourage reduction in household waste, and increase waste recovery and recycling?		
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	0	Development unlikely to impact on air quality. Site lies in an area where air quality acceptable.
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	-	Will create minor negative impacts to, or as a result of, the development, with minor negative impacts incapable of mitigation. The site is approximately 150 west of the M11. There is also an operational railway immediately to the South boundary. Requires high level of mitigation.
		Will it minimise, and where possible address, land contamination?	0	Development not on land likely to be contaminated
		Will it protect and where possible enhance the quality of the water environment?	0	Development unlikely to affect water quality. Assumptions for a neutral impact are that appropriate standards and pollution control measures will be achieved through the development process, e.g. as part of Sustainable Drainage Systems (Suds).
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiversity?	0	No impact on protected sites and species (or impacts could be mitigated).
	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	0	Assumptions for a neutral impact are that existing features that warrant retention can be retained or appropriate mitigation will be achieved through the development process.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process. A byway follows the entire length of the western boundary from the Lane in the village southwards towards the London Road in Harston

Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	-	Minor Negative Impact (Development conflicts with landscape character, minor negative impacts incapable of mitigation) - Development of this site would not relate well the rural character of this part of the village and it would not be possible to mitigate impact of a very visible site.
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	-	Minor Negative Impact (Development conflicts with townscape character, minor negative impacts incapable of mitigation) - Development of this site would not relate well the rural character of this part of the village and it would not be possible to mitigate impact of a very visible site.
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Archaeological potential will require further information but the assumption for a neutral impact is that it is likely appropriate mitigation can be achieved through the development process.
	Create places, spaces and buildings that work well, wear well and look good	Will it lead to developments built to a high standard of design and good place making that reflects local character?		
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	0	Standard requirements for renewables would apply.
		Will it promote energy efficiency?		
		Will it minimise contributions to climate change through sustainable construction practices?		
	Reduce vulnerability to future climate change effects	Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	0	Flood Zone 1 and no drainage issues that cannot be appropriately addressed.
		Will it minimise the likely impacts of climate change on the development through appropriate design?		
Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?				
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?		
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?		

Inclusive Communities - Housing	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	0	Neutral impact (existing features retained or appropriate mitigation). Assumption is standard requirements for open space would apply.
	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?		
		Will it provide for housing for the ageing population?		
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	No effect on pitch or plot provision.
Inclusive Communities - Redressing inequalities and involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	-	Group Village
		Sub-Indicator: Distance to centre	0	709m from the centre of the site to the village hall. Services and facilities clustered around surrounding area.
		Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	0	No facilities lost, and no new facilities proposed directly as a result of the development.
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will improve relations between people from different backgrounds or social groups?		
		Will it redress inequalities?		
	Encourage and enable the active involvement of local people in community activities	Will it increase the ability of people to influence decisions, including 'hard to reach' groups?		
		Will it encourage engagement with community activities?	0	No facilities lost, and no new facilities proposed directly as a result of the development.

Economic Activity		Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	0	Development would have no effect on employment land or premises.
	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	Development would have no effect on vitality or viability of existing centres. The indicator is likely to apply particularly to sites which include retail, offices, or leisure uses.
		Will it encourage the rural economy and diversification, and support sustainable tourism?		
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it contribute to providing a range of employment opportunities, in accessible locations?	0	31.93 minutes from site to nearest employment area with 2000+ employees. No employment areas with 2000+ employees that can be accessed in less than 30mins - 1.6km walk.
		Will it improve the level of investment in key community services and infrastructure, including broadband?	+	Minor Utilities Infrastructure improvements required, but constraints can be addressed. There is insufficient spare mains water capacity within the distribution zone to supply the number of proposed properties which could arise if all the SHLAA sites within the zone were to be developed. The sewerage network is close to capacity and will require mitigation.
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve access to education and training, and support provision of skilled employees to the economy?	-	School capacity not sufficient, but significant issues can be adequately addressed. Large deficit in primary and secondary school capacity.

Transport	Reduce the need to travel and promote more sustainable transport choices.	Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	0	Total score of 11.
		Sub-indicator: Distance to bus stop / rail station	+	575m ACF from the centre of the site to the nearest bus stop.
		Sub-indicator: Frequency of Public Transport	---	Less than hourly service.
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	0	31 Minutes from Hauxton to Cambridge.
		Sub-indicator: Distance for cycling to City Centre or Market Town	+	7.00km ACF from the centre of the site to Cambridge Market.
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	---	Insufficient capacity or access constraints that cannot be adequately mitigated. The access link to the public highway is unsuitable to serve the number of units that are being proposed.
		Will it make the transport network safer for and promote use of non-motorised modes?	0	No impact.

Site No. Site 193
Address Bartlow Road, Castle Camps
Location Castle Camps
Category of site Group Village
Site area 0.42

Theme	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	0	No previously developed land.
		Will it use land efficiently?		
		Will it protect and enhance the best and most versatile agricultural land?	-	Minor loss of best and most versatile agricultural land (Grades 1 and 2) - small site but all Grade 2
		Will it avoid the sterilisation of economic mineral reserves? Will it minimise the degradation/loss of soils due to new development?	0	Site not within an area designated in the Minerals and Waste LDF.
	Minimise waste production and support the reuse and recycling of waste products	Will it encourage reduction in household waste, and increase waste recovery and recycling?		
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	0	Development unlikely to impact on air quality. Site lies in an area where air quality acceptable.
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	-	Development compatible with neighbouring uses. Some minor to moderate additional road traffic noise generation impact on existing residential due to development related car movements but dependent on location of site entrance
		Will it minimise, and where possible address, land contamination?	0	Development not on land likely to be contaminated
		Will it protect and where possible enhance the quality of the water environment?	0	Development unlikely to affect water quality. The site within Groundwater Source Protection Zone 3 which does not rule out development but may influence land use or require pollution control measures. Assumptions for a neutral impact are that appropriate standards and pollution control measures will be achieved through the development process and will mitigate any impact on groundwater,
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiversity?	0	No impact on protected sites and species (or impacts could be mitigated).
	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	0	Assumptions for a neutral impact are that existing features that warrant retention can be retained or appropriate mitigation will be achieved through the development process.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process.

Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	-	Minor Negative Impact (Development conflicts with landscape character, minor negative impacts incapable of mitigation) Would be the loss of a significant wooded backdrop to the rural edge of the village and potentially a loss of mature hedgerows that create a rural character to this approach into Castle Camps.
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	0	Neutral impact (generally compatible, or capable of being made compatible with local townscape character). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process.
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Some impact on setting of listed buildings adjoining site. Archaeological potential will require further information but the assumption for a neutral impact is that it is likely appropriate mitigation can be achieved through the development process.
	Create places, spaces and buildings that work well, wear well and look good	Will it lead to developments built to a high standard of design and good place making that reflects local character?		
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	0	Standard requirements for renewables would apply.
		Will it promote energy efficiency?		
		Will it minimise contributions to climate change through sustainable construction practices?		
	Reduce vulnerability to future climate change effects	Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	0	Flood Zone 1 and no drainage issues that cannot be appropriately addressed.
		Will it minimise the likely impacts of climate change on the development through appropriate design?		
Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?				
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?		
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?		

Inclusive Communities - Housing	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	0	Neutral impact (existing features retained or appropriate mitigation).
	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?		
		Will it provide for housing for the ageing population?		
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	No effect on pitch or plot provision.
Inclusive Communities - Redressing inequalities and involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	-	Group Village
		Sub-Indicator: Distance to centre	+++	369m ACF from the centre of the site to a point on the High Street central to the village in relation to the services and facilities within the village
		Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	0	No facilities lost, and no new facilities proposed directly as a result of the development.
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will improve relations between people from different backgrounds or social groups?		
		Will it redress inequalities?		
		Will it increase the ability of people to influence decisions, including 'hard to reach' groups?		
	Encourage and enable the active involvement of local people in community activities	Will it encourage engagement with community activities?	0	No facilities lost, and no new facilities proposed directly as a result of the development.

Economic Activity		Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	0	Development would have no effect on employment land or premises.
	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	Development would have no effect on vitality or viability of existing centres. The indicator is likely to apply particularly to sites which include retail, offices, or leisure uses.
		Will it encourage the rural economy and diversification, and support sustainable tourism?		
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it contribute to providing a range of employment opportunities, in accessible locations?	+	21.63 minutes from site to nearest employment area with 2000+ employees. Only 1 employment area with 2000+ employees can be accessed in less than 30mins - 1.6km walk.
		Will it improve the level of investment in key community services and infrastructure, including broadband?	+	Minor Utilities Infrastructure improvements required, but constraints can be addressed. The WWTW is at capacity and the sewerage network is approaching capacity and both will require mitigation.
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve access to education and training, and support provision of skilled employees to the economy?	-	School capacity not sufficient, but significant issues can be adequately addressed

Transport	Reduce the need to travel and promote more sustainable transport choices.	Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	+	Total score of 18.
		Sub-indicator: Distance to bus stop / rail station	+++	343m ACF from centre of the site to nearest bus stop.
		Sub-indicator: Frequency of Public Transport	---	Less than hourly service.
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	+++	16 Minutes from Castle Camps to Haverhill.
		Sub-indicator: Distance for cycling to City Centre or Market Town	+++	4.74km ACF centre of site to Haverhill Market.
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	---	Insufficient capacity or access constraints that cannot be adequately mitigated. The proposed site does not appear to have a direct link to the adopted public highway.
		Will it make the transport network safer for and promote use of non-motorised modes?	0	No impact

Site No. Site 194
Address Land north of A428, Cambourne
Location countryside
Category of site New Settlement
Site area 164.11

Theme	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	0	The site includes 4 dwellings creating a very small area of previously developed land.
		Will it use land efficiently?		
		Will it protect and enhance the best and most versatile agricultural land?	---	Significant loss (20 hectares or more) of best and most versatile agricultural land (Grades 1 and 2) - the whole site is Grade 2 (over 160 ha).
	Minimise waste production and support the reuse and recycling of waste products	Will it avoid the sterilisation of economic mineral reserves? Will it minimise the degradation/loss of soils due to new development?	0	Site not within an area designated in the Minerals and Waste LDF.
Will it encourage reduction in household waste, and increase waste recovery and recycling?				
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	0/-	Development could impact on air quality, with minor negative impacts incapable of mitigation. The site is of a significant size and there is the potential for an increase in traffic and static emissions that could affect local air quality.
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	---	Significant negative impacts to or as a result of the development that are incapable of mitigation. The site is close to Papworth Business Park and the Motocross site, and offsite mitigation is likely to be required. Some possible noise and vibration from A428 which should be possible to mitigate. A high voltage overhead electricity line runs through the middle of the site so there are possible electromagnetic fields concerns (EMFs).
		Will it minimise, and where possible address, land contamination?	0	Development not on land likely to be contaminated.
		Will it protect and where possible enhance the quality of the water environment?	0	Development unlikely to effect water quality. Assumptions for a neutral impact are that appropriate standards and pollution control measures will be achieved through the development process, e.g. as part of Sustainable Drainage Systems (SuDS).
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiversity?	0	No impact on protected sites and species (or impacts could be mitigated). Brockley End Meadow CWS lies 900m to the east of the site. Elsworth Wood SSSI lies approximately 470m to the east of the site. Papworth Wood SSSI lies approximately 570m to the northwest of the site.
	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	0/-	Minor negative impact as loss of farmland and ditches that provide a habitat for water voles. Limited opportunities for habitat enhancement.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process.

Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	---	Significant negative impact (development conflicts with landscape character, with significant negative impacts incapable of mitigation) - due to its elevation and open character, development on this site would form a new built skyline when viewed from local villages and roads and would be visible over very long distances. The scale of the development and types of buildings proposed would be very difficult to integrate into the local landscape and would have a significant adverse effect on existing settlements and landmark buildings.
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	0	Neutral impact (generally compatible, or capable of being made compatible with local townscape character). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process.
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Archaeological potential will require further information but the assumption for a neutral impact is that it is likely appropriate mitigation can be achieved through the development process.
		Create places, spaces and buildings that work well, wear well and look good		
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	0/+	Development could create minor additional opportunities for renewable energy.
		Will it promote energy efficiency?		
		Will it minimise contributions to climate change through sustainable construction practices?		
	Reduce vulnerability to future climate change effects	Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	0	Flood Zone 1 and no drainage issues that cannot be appropriately addressed.
		Will it minimise the likely impacts of climate change on the development through appropriate design?		
	Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?			
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?		
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?		

Inclusive Communities - Housing	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	+	Development would create minor opportunities for new public open space.
	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?		
		Will it provide for housing for the ageing population?		
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	No effect on pitch or plot provision.
Inclusive Communities - Redressing inequalities and involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	+	New settlement.
		Sub-Indicator: Distance to centre	0	Centre point of site beyond 1000m of nearest existing centre Majority of site would be within 800m of any new local centre developed as part of site.
		Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	+ /+++	New local facilities or improved existing facilities are proposed of significant benefit. The development proposes employment, retail and community uses.
		Will improve relations between people from different backgrounds or social groups?		
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will it redress inequalities?		
		Will it increase the ability of people to influence decisions, including 'hard to reach' groups?		
	Encourage and enable the active involvement of local people in community activities	Will it encourage engagement with community activities?	+ /+++	New local community facilities or improved existing facility is proposed of minor benefit (and is viable and sustainable).

Economic Activity		Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	+ /+++	Development would support minor additional employment opportunities.
	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	The assumption is that any additional retail proposed will only be of a suitable scale to serve the needs of new residents and will not impact on other centres.
		Will it encourage the rural economy and diversification, and support sustainable tourism?		
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it contribute to providing a range of employment opportunities, in accessible locations?	+	33.94 minutes from site to nearest employment area with 2000+ employees. No employment areas with 2000+ employees that can be accessed in less than 30mins - 1.6km walk. Proposed - Site would develop business / employment as part of development. Therefore it is assumed that employments areas of 2000+ will
		Will it improve the level of investment in key community services and infrastructure, including broadband?	- /---	Major utilities infrastructure improvements required, but constraints can be addressed. Development of this site is not supportable from the existing electricity network, therefore significant reinforcement and new network required. There is insufficient spare capacity within the distribution zone to supply the total number of proposed properties which could arise if all the SHLAA sites with the zone were to be developed. The WwTW is operating close to capacity and therefore has limited capacity to accommodate this site. The sewerage network is approaching capacity.
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve access to education and training, and support provision of skilled employees to the economy?	-	School capacity not sufficient, but significant issues can be adequately addressed.

Transport	Reduce the need to travel and promote more sustainable transport choices.	Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	-	Total score of 9.
		Sub-indicator: Distance to bus stop / rail station	0	New settlement would require new bus stops which would mostly fall within 800m of the site. 1,005m ACF from the centre of the site to the nearest bus stop (1 service). 1,268m ACF from the centre of the site to the nearest bus stop (Citi 4 service).
		Sub-indicator: Frequency of Public Transport	+	New settlement would have at least a 20 minute bus service to Cambridge, equivalent to Cambourne Citi 4. 1 service - 2 hour service. Citi 4 - Hourly service
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	---	1 service - 17 minutes from bus stop to the centre of St. Ives. Citi 4 service - 52 minutes from bus stop to the centre of Cambridge.
		Sub-indicator: Distance for cycling to City Centre or Market Town	-	9.64km ACF from the centre of the site to St. Ives Market. 15.09km ACF from the centre of the site to Cambridge Market.
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	-/--	Insufficient capacity or access constraints that cannot be adequately be mitigated. Development would have a direct impact on A428 with potential capacity issues at the Cambourne Junction and on the corridor between Cambridge and St. Neots / Bedford, particularly junctions at either end of this section.
		Will it make the transport network safer for and promote use of non-motorised modes?	+	There are opportunities to encourage more sustainable transport links both on and off site e.g. strategic cycle route to Cambridge (via Highfields Caldecote and Coton), strengthen bus services on corridor between Cambourne and Cambridge (Service 4). Provision or contribution from this site would result in minor improvement to public transport, walking or cycling facilities.

Site No. Site 195
Address Land north and west of Elsworth School, Broad End, Elsworth
Location Elsworth
Category of site Group Village
Site area 1.32

Theme	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	0	No previously developed land.
		Will it use land efficiently?		
		Will it protect and enhance the best and most versatile agricultural land?	-	Minor loss of best and most versatile agricultural land (Grades 1 and 2) - small site but all Grade 2 (1.32 ha.).
	Minimise waste production and support the reuse and recycling of waste products	Will it avoid the sterilisation of economic mineral reserves? Will it minimise the degradation/loss of soils due to new development?	0	Site not within an area designated in the Minerals and Waste LDF.
Will it encourage reduction in household waste, and increase waste recovery and recycling?				
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	0	Development unlikely to impact on air quality. Site lies in an area where air quality acceptable.
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	0	Development compatible with neighbouring uses.
		Will it minimise, and where possible address, land contamination?	+	Potential for minor benefits through remediation of minor contamination as part of the site is allotments.
		Will it protect and where possible enhance the quality of the water environment?	0	Assumptions for a neutral impact are that appropriate standards and pollution control measures will be achieved through the development process, e.g. as part of Sustainable Drainage Systems (Suds).
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiversity?	0	No impact on protected sites and species (or impacts could be mitigated). A group of trees in the south western part of the site are protected. A further group of protected trees lies just north of the site.
	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	0	Assumptions for a neutral impact are that existing features that warrant retention can be retained or appropriate mitigation will be achieved through the development process.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process. A footpath runs along the southern and part of the western boundary of the site.

Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	---	Significant Negative Impact (Development conflicts with landscape character, with significant negative impacts incapable of mitigation) - The site forms part of the transition between the built up area and wider agricultural landscape. Development on this site would extend the village into open countryside outside the built-up area and harm the character of this very rural part of the village.
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	---	Significant Negative Impact (Development conflicts with townscape character, with significant negative impacts incapable of mitigation) - The site forms part of the transition between the built up area and wider agricultural landscape. Development on this site would extend the village into open countryside outside the built-up area and harm the character of this very rural part of the village.
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	-	Minor Negative Impact on historic Assets (incapable of satisfactory mitigation). The site forms part of the setting of several Grade II Listed Buildings and Conservation Area. Archaeological potential will require further information but it is likely appropriate mitigation can be achieved through the development process.
	Create places, spaces and buildings that work well, wear well and look good	Will it lead to developments built to a high standard of design and good place making that reflects local character?		
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	0	Standard requirements for renewables would apply.
		Will it promote energy efficiency?		
		Will it minimise contributions to climate change through sustainable construction practices?		
	Reduce vulnerability to future climate change effects	Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	0	Flood Zone 1 and no drainage issues that cannot be appropriately addressed.
		Will it minimise the likely impacts of climate change on the development through appropriate design?		
		Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?		
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?		
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?		

Inclusive Communities - Housing	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	0	Neutral impact (existing features retained or appropriate mitigation). Assumption is standard requirements for open space would apply.
	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?		
		Will it provide for housing for the ageing population?		
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	No effect on pitch or plot provision.
Inclusive Communities - Redressing Inequalities and involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	-	Group Village
		Sub-Indicator: Distance to centre	+++	362m ACF to the George and Dragon Pub - location chosen as representation of central point of services and facilities.
		Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	0	No facilities lost, and no new facilities proposed directly as a result of the development.
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will improve relations between people from different backgrounds or social groups?		
		Will it redress inequalities?		
		Will it increase the ability of people to influence decisions, including 'hard to reach' groups?		
Encourage and enable the active involvement of local people in community activities	Will it encourage engagement with community activities?	0	Neutral impact (existing features retained or appropriate mitigation). Assumption is standard requirements for open space would apply.	

Economic Activity		Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	0	Development would have no effect on employment land or premises.
	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	Development would have no effect on vitality or viability of existing centres. The assumption is that the local centre proposed will only be of a suitable scale to serve needs of new residents and will not impact on other centres.
		Will it encourage the rural economy and diversification, and support sustainable tourism?		
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it contribute to providing a range of employment opportunities, in accessible locations?	+	22.51 minutes from site to nearest employment area with 2000+ employees. Only 1 employment area with 2000+ employees that can be accessed in less than 30mins - 1.6km walk.
		Will it improve the level of investment in key community services and infrastructure, including broadband?	+	Minor Utilities Infrastructure improvements required, but constraints can be addressed. There is insufficient spare mains water capacity within the distribution zone to supply the number of proposed properties which could arise if all the SHLAA sites within the zone were to be developed. The sewerage network is close to capacity and will require mitigation.
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve access to education and training, and support provision of skilled employees to the economy?	-	School capacity not sufficient, but significant issues can be adequately addressed. Insufficient primary and secondary school capacity.

Transport		Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	0	Total score of 12.
	Reduce the need to travel and promote more sustainable transport choices.	Sub-indicator: Distance to bus stop / rail station	+++	367m ACF from the centre of the site to the nearest bus stop.
		Sub-indicator: Frequency of Public Transport	---	Less than hourly service.
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	-	45-50 Minutes from Elsworth to Cambridge.
		Sub-indicator: Distance for cycling to City Centre or Market Town	+	7.35km ACF from the centre of the site to St. Ives. Market.
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	0	No capacity constraints identified, safe access can be achieved.
		Will it make the transport network safer for and promote use of non-motorised modes?	0	No impact.

Site No. Site 196
Address Land to east of Ridgeway and north of Old Pine Way, Papworth Everard
Location Papworth Everard
Category of site Minor Rural Centre
Site area 81.77

Theme	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	0	No previously developed land.
		Will it use land efficiently?		
		Will it protect and enhance the best and most versatile agricultural land?	---	Significant loss (20 hectares or more) of best and most versatile agricultural land (Grades 1 and 2) - the whole site is Grade 2 (over 81 ha)
		Will it avoid the sterilisation of economic mineral reserves? Will it minimise the degradation/loss of soils due to new development?	0	Site not within an area designated in the Minerals and Waste LDF.
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it encourage reduction in household waste, and increase waste recovery and recycling?		
		Will it maintain or improve air quality?	0/-	Development could impact on air quality, with minor negative impacts incapable of mitigation. The site is of a significant size and there is the potential for an increase in traffic and static emissions that could affect local air quality.
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	0/-	Development compatible with neighbouring uses. Some minor to moderate additional road traffic noise generation on existing residential due to development related car movements but dependent on location of site entrance. A small part of the site is within the safeguarding area for the Papworth Everard Sewage Treatment Works, within which there is a presumption against development that would be occupied by people
		Will it minimise, and where possible address, land contamination?	0	Development not on land likely to be contaminated.
Biodiversity	Avoid damage to designated sites and protected species	Will it protect and where possible enhance the quality of the water environment?	0	Development unlikely to effect water quality. Assumptions for a neutral impact are that appropriate standards and pollution control measures will be achieved through the development process, e.g. as part of Sustainable Drainage Systems (SuDS).
		Will it conserve protected species and protect sites designated for nature conservation interest and geodiversity?	0/-	Minor negative impact on protected sites and species. The site is adjacent to Papworth Wood SSSI and approximately 345 metres from the Elsworth / Hilton Road Side Verge CWS.
		Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	0	Assumptions for a neutral impact are that existing features that warrant retention can be retained or appropriate mitigation will be achieved through the development process.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process.

Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	---	Significant negative impact (development conflicts with landscape character, with significant negative impacts incapable of mitigation) - the site is located on a ridge and therefore any built development would be prominent, harsh edge to the village in the wide views across the undulating arable fields.
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	-	Minor negative impact (development conflicts with townscape character, minor negative impacts incapable of mitigation) - development of this site would change the the strong linear character of the village.
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Archaeological potential will require further information but the assumption for a neutral impact is that it is likely appropriate mitigation can be achieved through the development process.
	Create places, spaces and buildings that work well, wear well and look good	Will it lead to developments built to a high standard of design and good place making that reflects local character?		
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	0	Standard requirements for renewables would apply.
		Will it promote energy efficiency?		
		Will it minimise contributions to climate change through sustainable construction practices?		
	Reduce vulnerability to future climate change effects	Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	0	Flood Zone 1 and no drainage issues that cannot be appropriately addressed.
		Will it minimise the likely impacts of climate change on the development through appropriate design?		
Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?				
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?		
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?		

Inclusive Communities - Housing	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	+/0	Development would create minor opportunities for new public open space.
	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?		
		Will it provide for housing for the ageing population?		
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	No effect on pitch or plot provision.
Inclusive Communities - Redressing inequalities and involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	0	Minor Rural Centre
		Sub-Indicator: Distance to centre	0	790m ACF to the High Street - location chosen as representation of central point of services and facilities.
		Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	0	No facilities lost, and no new facilities proposed directly as a result of the development.
		Will improve relations between people from different backgrounds or social groups?		
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will it redress inequalities?		
		Will it increase the ability of people to influence decisions, including 'hard to reach' groups?		
Encourage and enable the active involvement of local people in community activities	Will it encourage engagement with community activities?	0	No facilities lost, and no new facilities proposed directly as a result of the development.	

Economic Activity		Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	0	Development would have no effect on employment land or premises.
	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	Development would have no effect on vitality or viability of existing centres. The indicator is likely to apply particularly to sites which include retail, offices, or leisure uses.
		Will it encourage the rural economy and diversification, and support sustainable tourism?		
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it contribute to providing a range of employment opportunities, in accessible locations?	+	21.24 minutes from site to nearest employment area with 2000+ employees. Only 1 employment area with 2000+ employees that can be accessed in less than 30mins - 1.6km walk.
		Support appropriate investment in people, places, communications and other infrastructure	Will it improve the level of investment in key community services and infrastructure, including broadband?	+
	Will it improve access to education and training, and support provision of skilled employees to the economy?		-	School capacity not sufficient, but significant issues can be adequately addressed.

Transport	Reduce the need to travel and promote more sustainable transport choices.	Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	0	Total score of 13.
		Sub-indicator: Distance to bus stop / rail station	0	713m ACF from the centre of the site to the nearest bus stop (1 service).
		Sub-indicator: Frequency of Public Transport	---	2 hour service.
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	+++	13 Minutes from Papworth Everard to St. Ives
		Sub-indicator: Distance for cycling to City Centre or Market Town	+	7.84km ACF from the centre of the site to St. Ives. Market.
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	-	Minor negative effects incapable of mitigation. Safe access to the highway can be achieved, however development would have a direct impact on A428 with potential capacity issues at the Cambourne Junction and on the corridor between Cambridge and St. Neots / Bedford, particularly junctions at either end of this section.
		Will it make the transport network safer for and promote use of non-motorised modes?	0	No impact.

Site No. Site 197
Address Land adjacent to Back Road, Linton
Location Linton
Category of site Minor Rural Centre
Site area 16.73

Theme	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	0	No previously developed land.
		Will it use land efficiently?		
		Will it protect and enhance the best and most versatile agricultural land?	-	Minor loss of best and most versatile agricultural land (Grades 1 and 2) - Majority of site is grade 2
		Will it avoid the sterilisation of economic mineral reserves? Will it minimise the degradation/loss of soils due to new development?	-	Site falls within a designated area in the Minerals and Waste LDF, development would have minor negative impacts on identified Minerals Reserves. The southwest portion of the site adjacent to the river is within a minerals safeguarding area for sand and gravel – about a quarter.
	Minimise waste production and support the reuse and recycling of waste products	Will it encourage reduction in household waste, and increase waste recovery and recycling?		
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	0	Development unlikely to impact on air quality. Site lies in an area where air quality acceptable.
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	-	Development compatible with neighbouring uses. Some minor to moderate additional road traffic noise generation impact on existing residential due to development related car movements but dependent on location of site entrance
		Will it minimise, and where possible address, land contamination?	0	Development not on land likely to be contaminated
		Will it protect and where possible enhance the quality of the water environment?	0	Development unlikely to affect water quality. About a sixth of the northern part of the site is within Groundwater Source Protection Zone 1 and the remainder in zone 2 which does not rule out development but may influence land use or require pollution control measures. Assumptions for a neutral impact are that appropriate standards and pollution control measures will be achieved through the development process and will mitigate any impact on groundwater, e.g. as part of Sustainable Drainage Systems (Suds).
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiversity?	-/0?	Minor negative impact on protected sites and species incapable of mitigation - County Wildlife Site – Furze Hills Road Side Verge – supports a population of a nationally scarce vascular plant species (<i>Clinopodium calamintha</i>)
	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	0	Assumptions for a neutral impact are that existing features that warrant retention can be retained or appropriate mitigation will be achieved through the development process.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process.

Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	---	Significant Negative Impact (Development conflicts with landscape character, with significant negative impacts incapable of mitigation) - the site is prominently located on the slopes of Rivey Hill that is a key feature of the landscape setting of Linton.
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	0	Neutral impact (generally compatible, or capable of being made compatible with local townscape character). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process.
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	---	Significant Negative Impact on historic Assets (incapable of satisfactory mitigation) - site forms an important part of the setting of listed buildings at Little Linton - major adverse effect due to loss of countryside context and backdrop and loss of separation of this former village from Linton. / loss of historic role. Archaeological potential will require further information but it is likely appropriate mitigation can be achieved through the development process.
	Create places, spaces and buildings that work well, wear well and look good	Will it lead to developments built to a high standard of design and good place making that reflects local character?		
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	0	Standard requirements for renewables would apply.
		Will it promote energy efficiency?		
		Will it minimise contributions to climate change through sustainable construction practices?		
	Reduce vulnerability to future climate change effects	Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	0	Flood Zone 1 and no drainage issues that cannot be appropriately addressed. Small part of Flood Zone 2 touches southern boundary.
		Will it minimise the likely impacts of climate change on the development through appropriate design?		
		Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?		
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?		
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?		

Inclusive Communities - Housing	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	0	Neutral impact (existing features retained or appropriate mitigation).
	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?		
		Will it provide for housing for the ageing population?		
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	No effect on pitch or plot provision.
Inclusive Communities - Redressing inequalities and involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	0	Minor Rural Centre
		Sub-Indicator: Distance to centre	---	1,170m ACF to the High Street - location chosen as representation of central point of these services and facilities.
		Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	0	No facilities lost, and no new facilities proposed directly as a result of the development.
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will improve relations between people from different backgrounds or social groups?		
		Will it redress inequalities?		
		Will it increase the ability of people to influence decisions, including 'hard to reach' groups?		
	Encourage and enable the active involvement of local people in community activities	Will it encourage engagement with community activities?	0	No facilities lost, and no new facilities proposed directly as a result of the development.

Economic Activity		Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	0	Development would have no effect on employment land or premises.
	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	Development would have no effect on vitality or viability of existing centres. The indicator is likely to apply particularly to sites which include retail, offices, or leisure uses.
		Will it encourage the rural economy and diversification, and support sustainable tourism?		
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it contribute to providing a range of employment opportunities, in accessible locations?	0	32.86 minutes from site to nearest employment area with 2000+ employees. No employment areas with 2000+ employees can be accessed in less than 30mins - 1.6km walk.
		Will it improve the level of investment in key community services and infrastructure, including broadband?	-	Major utilities infrastructure improvements required, but constraints can be addressed. There is insufficient spare mains water capacity within the distribution zone to supply the number of proposed properties which could arise if all the SHLAA sites within the zone were to be developed. The demand for electricity from the development is likely to trigger local 11,000 volt reinforcement. As the proposed site is for more than 150 dwellings this may require greater system reinforcement to gas supply. The sewage network is approaching
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve access to education and training, and support provision of skilled employees to the economy?	-	School capacity not sufficient, but significant issues be adequately addressed

Transport	Reduce the need to travel and promote more sustainable transport choices.	Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	0	Total score of 10.
		Sub-indicator: Distance to bus stop / rail station	---	1,032m ACF from the centre of the site to the nearest bus stop.
		Sub-indicator: Frequency of Public Transport	0	30 Minute Service.
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	0	31 Minutes from Linton to Cambridge.
		Sub-indicator: Distance for cycling to City Centre or Market Town	+	9.40km ACF from the centre of the site to Saffron Walden Market.
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	---	Insufficient capacity or access constraints that cannot be adequately mitigated. Highway Authority has severe concerns with regards to the accident record of the A1307 and therefore before the proposed scheme comes forward a detailed analysis of access points onto the A1307 will need to be completed.
		Will it make the transport network safer for and promote use of non-motorised modes?	0	No impact

Site No. Site 198
Address Land adjacent to Balsham Road, Linton
Location Linton
Category of site Minor Rural Centre
Site area 3.07

Theme	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	0	No previously developed land.
		Will it use land efficiently?		
		Will it protect and enhance the best and most versatile agricultural land?	0	Development would not affect best and most versatile agricultural land (Grades 1 and 2).
		Will it avoid the sterilisation of economic mineral reserves? Will it minimise the degradation/loss of soils due to new development?	0	Site not within an area designated in the Minerals and Waste LDF.
	Minimise waste production and support the reuse and recycling of waste products	Will it encourage reduction in household waste, and increase waste recovery and recycling?		
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	0	Development unlikely to impact on air quality. Site lies in an area where air quality acceptable.
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	-	Development compatible with neighbouring uses. Some minor to moderate additional road traffic noise generation impact on existing residential due to development related car movements but dependent on location of site entrance
		Will it minimise, and where possible address, land contamination?	0	Development not on land likely to be contaminated.
		Will it protect and where possible enhance the quality of the water environment?	0	Development unlikely to affect water quality. The site within Groundwater Source Protection Zone 2 which does not rule out development but may influence land use or require pollution control measures. Assumptions for a neutral impact are that appropriate standards and pollution control measures will be achieved through the development process and will mitigate any impact on groundwater, e.g. as part of Sustainable Drainage Systems (Suds).
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiversity?	0	No impact on protected sites and species (or impacts could be mitigated).
	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	0	Assumptions for a neutral impact are that existing features that warrant retention can be retained or appropriate mitigation will be achieved through the development process.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process.

Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	-	Minor Negative Impact (Development conflicts with landscape character, minor negative impacts incapable of mitigation) - This site is in a prominent location part of the network of fields that form the rural setting of Linton. Development would have an impact on the approach road into the modern part of Linton but the slope of the field downwards towards the north means that long view and views from the south are minimal subject to height of any development.
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	0	Neutral impact (generally compatible, or capable of being made compatible with local townscape character). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process. Limited development along western edge of site could result in opportunity to improve existing harsh edge to village.
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	0	Neutral impact (generally compatible, or capable of being made compatible with local landscape character). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process. The impact on the setting of the historic core of the village would be relatively limited because the slope of the field means that views from the south are minimal. Archaeological potential will require further information but the assumption for a neutral impact is that it is likely appropriate mitigation can be achieved through the development process.
	Create places, spaces and buildings that work well, wear well and look good	Will it lead to developments built to a high standard of design and good place making that reflects local character?		
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	0	Standard requirements for renewables would apply.
		Will it promote energy efficiency?		
	Reduce vulnerability to future climate change effects	Will it minimise contributions to climate change through sustainable construction practices?		
		Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	0	Flood Zone 1 and no drainage issues that cannot be appropriately addressed.
Will it minimise the likely impacts of climate change on the development through appropriate design?				
	Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?			
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?		
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?		

Inclusive Communities - Housing	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	0	Neutral impact (existing features retained or appropriate mitigation).
	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?		
		Will it provide for housing for the ageing population?		
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	No effect on pitch or plot provision.
Inclusive Communities - Redressing inequalities and involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	0	Minor Rural Centre
		Sub-Indicator: Distance to centre	-	816m ACF to the High Street - location chosen as representation of central point of these services and facilities.
		Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	0	No facilities lost, and no new facilities proposed directly as a result of the development.
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will improve relations between people from different backgrounds or social groups?		
		Will it redress inequalities?		
		Will it increase the ability of people to influence decisions, including 'hard to reach' groups?		
Encourage and enable the active involvement of local people in community activities	Will it encourage engagement with community activities?	0	No facilities lost, and no new facilities proposed directly as a result of the development.	

Economic Activity	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	0	Development would have no effect on employment land or premises.
		Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	Development would have no effect on vitality or viability of existing centres. The indicator is likely to apply particularly to sites which include retail, offices, or leisure uses.
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it encourage the rural economy and diversification, and support sustainable tourism?		
		Will it contribute to providing a range of employment opportunities, in accessible locations?	0	31.32 minutes from site to nearest employment area with 2000+ employees. No employment areas with 2000+ employees can be accessed in less than 30mins - 1.6km walk.
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve the level of investment in key community services and infrastructure, including broadband?	+	Minor Utilities Infrastructure improvements required, but constraints can be addressed. There is insufficient spare mains water capacity within the distribution zone to supply the number of proposed properties which could arise if all the SHLAA sites within the zone were to be developed. The sewage network is approaching capacity.
		Will it improve access to education and training, and support provision of skilled employees to the economy?	-	School capacity not sufficient, but significant issues can be adequately addressed

Transport	Reduce the need to travel and promote more sustainable transport choices.	Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	0	Total score of 14.
		Sub-indicator: Distance to bus stop / rail station	+	538m ACF from the centre of the site to the nearest bus stop.
		Sub-indicator: Frequency of Public Transport	0	30 Minute Service.
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	0	31 Minutes from Linton to Cambridge.
		Sub-indicator: Distance for cycling to City Centre or Market Town	+	9.26km ACF from the centre of the site to Saffron Walden Market.
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	0	No capacity constraints identified, safe access can be achieved.
		Will it make the transport network safer for and promote use of non-motorised modes?	0	No impact.

Site No. Site 199
Address Land adjacent to Horseheath Road, Linton
Location Linton
Category of site Minor Rural Centre
Site area 6.53

Theme	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	0	No previously developed land.
		Will it use land efficiently?		
		Will it protect and enhance the best and most versatile agricultural land?	0	Development would not affect best and most versatile agricultural land (Grades 1 and 2).
	Minimise waste production and support the reuse and recycling of waste products	Will it avoid the sterilisation of economic mineral reserves? Will it minimise the degradation/loss of soils due to new development?	0	Site not within an area designated in the Minerals and Waste LDF.
Will it encourage reduction in household waste, and increase waste recovery and recycling?				
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	0	Development unlikely to impact on air quality. Site lies in an area where air quality acceptable.
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	-	Development compatible with neighbouring uses. Some minor to moderate additional road traffic noise generation impact on existing residential due to development related car movements but dependent on location of site entrance
		Will it minimise, and where possible address, land contamination?	0	Development not on land likely to be contaminated.
		Will it protect and where possible enhance the quality of the water environment?	0	Development unlikely to affect water quality. The site within GroundwaterSource Protection Zone 2 which does not rule out development but may influence land use or require pollution control measures. Assumptions for a neutral impact are that appropriate standards and pollution control measures will be achieved through the development process and will mitigate any impact on groundwater, e.g. as part of Sustainable Drainage Systems (Suds).
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiversity?	0	No impact on protected sites and species (or impacts could be mitigated).
	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	0	Assumptions for a neutral impact are that existing features that warrant retention can be retained or appropriate mitigation will be achieved through the development process.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process.

Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	---	Significant Negative Impact (Development conflicts with landscape character, with significant negative impacts incapable of mitigation) - the site is prominently located part of the rolling countryside that is an important part of the landscape setting of Linton.
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	0	Neutral impact (generally compatible, or capable of being made compatible with local townscape character). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process.
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	---	Significant Negative Impact on historic Assets (incapable of satisfactory mitigation) - Adverse effect on setting of Conservation Area and of numerous listed buildings due to the prominence of the site across the valley and village and on approach to Linton. Archaeological potential will require further information but the assumption for a neutral impact is that it is likely appropriate mitigation can be achieved through the development process.
	Create places, spaces and buildings that work well, wear well and look good	Will it lead to developments built to a high standard of design and good place making that reflects local character?		
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	0	Standard requirements for renewables would apply.
		Will it promote energy efficiency?		
		Will it minimise contributions to climate change through sustainable construction practices?		
	Reduce vulnerability to future climate change effects	Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	0	Flood Zone 1 and no drainage issues that cannot be appropriately addressed.
		Will it minimise the likely impacts of climate change on the development through appropriate design?		
		Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?		
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?		
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?		

Inclusive Communities - Housing	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	0	Neutral impact (existing features retained or appropriate mitigation).
	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?		
		Will it provide for housing for the ageing population?		
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	No effect on pitch or plot provision.
Inclusive Communities - Redressing inequalities and involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	0	Minor Rural Centre
		Sub-Indicator: Distance to centre	---	1,005m ACF to the High Street - location chosen as representation of central point of these services and facilities.
		Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	0	No facilities lost, and no new facilities proposed directly as a result of the development.
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will improve relations between people from different backgrounds or social groups?		
		Will it redress inequalities?		
		Will it increase the ability of people to influence decisions, including 'hard to reach' groups?		
	Encourage and enable the active involvement of local people in community activities	Will it encourage engagement with community activities?	0	No facilities lost, and no new facilities proposed directly as a result of the development.

Economic Activity		Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	0	Development would have no effect on employment land or premises.
	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	Development would have no effect on vitality or viability of existing centres. The indicator is likely to apply particularly to sites which include retail, offices, or leisure uses.
		Will it encourage the rural economy and diversification, and support sustainable tourism?		
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it contribute to providing a range of employment opportunities, in accessible locations?	+	27.05 minutes from site to nearest employment area with 2000+ employees. 2 employment areas with 2000+ employees can be accessed in less than 30mins - 1.6km walk.
		Will it improve the level of investment in key community services and infrastructure, including broadband?	-	major utilities infrastructure improvements required, but constraints can be addressed. There is insufficient spare mains water capacity within the distribution zone to supply the number of proposed properties which could arise if all the SHLAA sites within the zone were to be developed. The sewage network is approaching capacity. The demand for electricity from the development is likely to trigger local 11,000 volt reinforcement. As the proposed site is for more than 150 dwellings this may require greater system reinforcement to gas supply.
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve access to education and training, and support provision of skilled employees to the economy?	-	School capacity not sufficient, but significant issues can be adequately addressed

Transport	Reduce the need to travel and promote more sustainable transport choices.	Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	+	Total score of 16.
		Sub-indicator: Distance to bus stop / rail station	+++	253m ACF from the centre of the site to the nearest bus stop.
		Sub-indicator: Frequency of Public Transport	0	30 Minute Service.
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	0	31 Minutes from Linton to Cambridge.
		Sub-indicator: Distance for cycling to City Centre or Market Town	+	8.94km ACF from the centre of the site to Saffron Walden Market.
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	---	Insufficient capacity or access constraints that cannot be adequately mitigated. Highway Authority has severe concerns with regards to the accident record of the A1307 and therefore before the proposed scheme comes forward a detailed analysis of access points onto the A1307 will need to be completed.
		Will it make the transport network safer for and promote use of non-motorised modes?	0	No impact.

Site No. Site 200
Address Land to the north and south of Long Lane and east of The Grip, Linton
Location Linton
Category of site Minor Rural Centre
Site area 6.48

Theme	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	0	Majority of site is not previously developed land. However there is a small part of an old railway line within the site.
		Will it use land efficiently?		
		Will it protect and enhance the best and most versatile agricultural land?	0	Development would not affect best and most versatile agricultural land (Grades 1 and 2)
		Will it avoid the sterilisation of economic mineral reserves? Will it minimise the degradation/loss of soils due to new development?	0	Site not within an area designated in the Minerals and Waste LDF.
	Minimise waste production and support the reuse and recycling of waste products	Will it encourage reduction in household waste, and increase waste recovery and recycling?		
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	0	Development unlikely to impact on air quality. Site lies in an area where air quality acceptable.
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	---	Will create significant negative impacts to, or as a result of, the development, incapable of adequate mitigation. The North of the site is bounded by Granta Garage and Filling Station and the busy A1307. Noise and odour from the garage are obvious material considerations in terms of health and well-being and providing a high quality living environment. Environmental Health currently object to this site and before any consideration is given to allocating this site for residential development it is recommended that these noise and odour constraints are thoroughly investigated and duly considered / addressed including consideration of mitigation by undertaking odour and noise impact / risk assessments in accordance with PPG 24 Planning and Noise and associated guidance.
		Will it minimise, and where possible address, land contamination?	+	Current land use appears to be of commercial/industrial and therefore would require investigation since it may have contaminated land. Potential for minor benefits through remediation of minor contamination
		Will it protect and where possible enhance the quality of the water environment?	0	Development unlikely to affect water quality. The site is within Groundwater Source Protection Zone 2 which does not rule out development but may influence land use or require pollution control measures. Assumptions for a neutral impact are that appropriate standards and pollution control measures will be achieved through the development process and will mitigate any impact on groundwater, e.g. as part of Sustainable Drainage Systems (Suds).

Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiversity?	0	No impact on protected sites and species (or impacts could be mitigated). County Wildlife Site along disused railway line which only in very small part of site and would be capable of mitigation through the development process.
	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	0	Assumptions for a neutral impact are that existing features that warrant retention can be retained or appropriate mitigation will be achieved through the development process.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process.
Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	-	Minor Negative Impact (Development conflicts with landscape character, minor negative impacts incapable of mitigation) - the site has a rural character and is in a prominent location in terms of views into and out of the historic centre of the village.
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	-	Minor Negative Impact (development conflicts with townscape character, minor negative impacts incapable of mitigation) -
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	-	Minor Negative Impact on historic Assets (incapable of satisfactory mitigation) – site forms an important part of the setting of a number of Listed buildings adjoining the site. Archaeological potential will require further information but the assumption for a neutral impact is that it is likely appropriate mitigation can be achieved through the development process.
	Create places, spaces and buildings that work well, wear well and look good	Will it lead to developments built to a high standard of design and good place making that reflects local character?		

Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	0	Standard requirements for renewables would apply.
		Will it promote energy efficiency?		
		Will it minimise contributions to climate change through sustainable construction practices?		
	Reduce vulnerability to future climate change effects	Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	0	Majority of site Flood Zone 1 . A small part of the north west corner of the site is within Flood Zone 2 - drainage issues capable of being appropriately addressed
		Will it minimise the likely impacts of climate change on the development through appropriate design?		
		Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?		
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?		
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?		
Inclusive Communities - Housing	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	0	Neutral impact (existing features retained or appropriate mitigation).
	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?		
		Will it provide for housing for the ageing population?		
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	No effect on pitch or plot provision.

Inclusive Communities - Redressing Inequalities and Involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	0	Minor Rural Centre
		Sub-Indicator: Distance to centre	+	545m ACF to the High Street - location chosen as representation of central point of these services and facilities.
		Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	0	No facilities lost, and no new facilities proposed directly as a result of the development.
		Will improve relations between people from different backgrounds or social groups?		
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will it redress inequalities?		
		Will it increase the ability of people to influence decisions, including 'hard to reach' groups?		
	Encourage and enable the active involvement of local people in community activities	Will it encourage engagement with community activities?	0	No facilities lost, and no new facilities proposed directly as a result of the development.

Economic Activity		Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	0	Development would have no effect on employment land or premises.
	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	Development would have no effect on vitality or viability of existing centres. The indicator is likely to apply particularly to sites which include retail, offices, or leisure uses.
		Will it encourage the rural economy and diversification, and support sustainable tourism?		
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it contribute to providing a range of employment opportunities, in accessible locations?	+	23.57 minutes from site to nearest employment area with 2000+ employees. 3 employment areas with 2000+ employees can be accessed in less than 30mins - 1.6km walk.
		Will it improve the level of investment in key community services and infrastructure, including broadband?	-	Major utilities Infrastructure improvements required, but constraints can be addressed. There is insufficient spare mains water capacity within the distribution zone to supply the number of proposed properties which could arise if all the SHLAA sites within the zone were to be developed. The sewage network is approaching capacity. The demand for electricity from the development is likely to trigger local 11,000 volt reinforcement.
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve access to education and training, and support provision of skilled employees to the economy?	-	School capacity not sufficient, but significant issues can be adequately addressed

Transport	Reduce the need to travel and promote more sustainable transport choices.	Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	+	Total score of 16.
		Sub-indicator: Distance to bus stop / rail station	+++	328m ACF from the centre of the site to the nearest bus stop.
		Sub-indicator: Frequency of Public Transport	0	30 Minute Service.
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	0	31 Minutes from Linton to Cambridge.
		Sub-indicator: Distance for cycling to City Centre or Market Town	+	8.14km ACF from the centre of the site to Saffron Walden Market.
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	---	Insufficient capacity or access constraints that cannot be adequately mitigated. Highway Authority has severe concerns with regards to the accident record of the A1307 and therefore before the proposed scheme comes forward a detailed analysis of access points onto the A1307 will need to be completed.
		Will it make the transport network safer for and promote use of non-motorised modes?	0	No impact.

Site No. Site 201
Address Land north of Cambridge Road, Linton
Location Linton
Category of site Minor Rural Centre
Site area 6.3

Theme	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	0	No previously developed land.
		Will it use land efficiently?		
		Will it protect and enhance the best and most versatile agricultural land?	0	Development would not affect best and most versatile agricultural land (Grades 1 and 2).
		Will it avoid the sterilisation of economic mineral reserves? Will it minimise the degradation/loss of soils due to new development?	-	Site falls within a designated area in the Minerals and Waste LDF - three quarters of site is within a safeguarding area for sand and gravel. Development would have minor negative impacts on identified Mineral Reserves.
	Minimise waste production and support the reuse and recycling of waste products	Will it encourage reduction in household waste, and increase waste recovery and recycling?		
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	0	Development unlikely to impact on air quality. Site lies in an area where air quality acceptable.
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	-	Development compatible with neighbouring uses. Some minor to moderate additional road traffic noise generation impact on existing residential due to development related car movements but dependent on location of site entrance. Likely to be traffic noise from A1307 since it adjacent to the southern boundary of the site. The impact of existing noise on any future residential in this area is a material consideration in terms of health and well-being and providing a high quality living environment. Should be possible to mitigate.
		Will it minimise, and where possible address, land contamination?	0	Development not on land likely to be contaminated.
		Will it protect and where possible enhance the quality of the water environment?	0	Development unlikely to affect water quality. The majority of the site within Groundwater Source Protection Zone 3 with rest in Zone 2 which does not rule out development but may influence land use or require pollution control measures. Assumptions for a neutral impact are that appropriate standards and pollution control measures will achieved through the development process and will mitigate any impact on groundwater, e.g. as part of Sustainable Drainage Systems (Suds).
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiversity?	0	No impact on protected sites and species (or impacts could be mitigated).
	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	0	Assumptions for a neutral impact are that existing features that warrant retention can be retained or appropriate mitigation will be achieved through the development process.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process.
	Maintain and enhance the diversity	Will it maintain and enhance the diversity and distinctiveness of landscape character?	---	Significant Negative Impact (Development conflicts with landscape character, with significant negative impacts incapable of mitigation) - the site is located such that there would be a significant loss of open space and meadows.

Landscape, Townscape and Cultural Heritage	and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of townscape character?	---	Significant Negative Impact (Development conflicts with townscape character, with significant negative impacts incapable of mitigation) - site forms an important part of the setting of the Grade I Listed church, Conservation Area, and the historic core of the village.
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	---	Significant Negative Impact on historic Assets (incapable of satisfactory mitigation) - site forms an important part of the setting of the Grade I Listed church, Conservation Area, and the historic core of the village. Archaeological potential will require further information but it is likely appropriate mitigation can be achieved through the development process.
	Create places, spaces and buildings that work well, wear well and look good	Will it lead to developments built to a high standard of design and good place making that reflects local character?		
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	0	Standard requirements for renewables would apply.
		Will it promote energy efficiency?		
		Will it minimise contributions to climate change through sustainable construction practices?		
	Reduce vulnerability to future climate change effects	Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	--- / -	Flood Zone 3 (or other form of flood risk incapable of appropriate mitigation) - a third of the site is in zone 3 - the remainder of the site is zone 1 adjacent to the A1307.
Will it minimise the likely impacts of climate change on the development through appropriate design?				
Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?				
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?		
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?		

Inclusive Communities - Housing	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	0	Neutral impact (existing features retained or appropriate mitigation).
	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?		
		Will it provide for housing for the ageing population?		
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	No effect on pitch or plot provision.
Inclusive Communities - Redressing inequalities and involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	0	Minor Rural Centre
		Sub-Indicator: Distance to centre	+++	350m ACF to the High Street - location chosen as representation of central point of these services and facilities.
		Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	0	No facilities lost, and no new facilities proposed directly as a result of the development.
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will improve relations between people from different backgrounds or social groups?		
		Will it redress inequalities?		
		Will it increase the ability of people to influence decisions, including 'hard to reach' groups?		
Encourage and enable the active involvement of local people in community activities	Will it encourage engagement with community activities?	0	No facilities lost, and no new facilities proposed directly as a result of the development.	

Economic Activity		Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	0	Development would have no effect on employment land or premises.
	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	Development would have no effect on vitality or viability of existing centres. The indicator is likely to apply particularly to sites which include retail, offices, or leisure uses.
		Will it encourage the rural economy and diversification, and support sustainable tourism?		
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it contribute to providing a range of employment opportunities, in accessible locations?	+	24.02 minutes from site to nearest employment area with 2000+ employees. 4 employment areas with 2000+ employees can be accessed in less than 30mins - 1.6km walk.
		Will it improve the level of investment in key community services and infrastructure, including broadband?	-	Major utilities infrastructure improvements required, but constraints can be addressed. There is insufficient spare mains water capacity within the distribution zone to supply the number of proposed properties which could arise if all the SHLAA sites within the zone were to be developed. The sewage network is approaching capacity. The demand for electricity from the development is likely to trigger local 11,000 volt reinforcement. Since the proposal is for more than 150 dwellings there may require greater system reinforcement for the gas supply.
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve access to education and training, and support provision of skilled employees to the economy?	-	School capacity not sufficient, but significant issues can be adequately addressed

Transport	Reduce the need to travel and promote more sustainable transport choices.	Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	+	Total score of 16.
		Sub-indicator: Distance to bus stop / rail station	+++	375m ACF from the centre of the site to the nearest bus stop.
		Sub-indicator: Frequency of Public Transport	0	30 Minute Service.
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	0	31 Minutes from Linton to Cambridge.
		Sub-indicator: Distance for cycling to City Centre or Market Town	+	8.32km ACF from the centre of the site to Saffron Walden Market.
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	---	Insufficient capacity or access constraints that cannot be adequately mitigated. Highway Authority has severe concerns with regards to the accident record of the A1307 and therefore before the proposed scheme comes forward a detailed analysis of access points onto the A1307 will need to be completed.
		Will it make the transport network safer for and promote use of non-motorised modes?	0	No impact.

Site No. Site 202
Address Land off Cambridge Road, Waterbeach
Location Waterbeach
Category of site Minor Rural Centre
Site area 4.81

Theme	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	0	No previously developed land.
		Will it use land efficiently?		
		Will it protect and enhance the best and most versatile agricultural land?	-	Minor loss of best and most versatile agricultural land (Grades 1 and 2) - small site but all Grade 2.
		Will it avoid the sterilisation of economic mineral reserves? Will it minimise the degradation/loss of soils due to new development?	0	The majority of the site within an area designated in the Minerals and Waste LDF but development would not have a negative impact.
	Minimise waste production and support the reuse and recycling of waste products	Will it encourage reduction in household waste, and increase waste recovery and recycling?		
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	0	Development unlikely to impact on air quality. Site lies in an area where air quality acceptable.
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	-	Development compatible with neighbouring uses. Some potential for traffic noise from A10, but should be possible to mitigate. Some minor to moderate additional road traffic noise generation impact on existing residential due to development related car movements but dependent on location of site entrance.
		Will it minimise, and where possible address, land contamination?	0	Development not on land likely to be contaminated
		Will it protect and where possible enhance the quality of the water environment?	0	Assumptions for a neutral impact are that appropriate standards and pollution control measures will be achieved through the development process, e.g. as part of Sustainable Drainage Systems (Suds). A majority of the development sites falls within the Waterbeach Level Internal Drainage District, which does not have any capacity to accept any direct discharge into its system above the green field run off rate. All surface water from the site would have to be balanced before it is released into the Boards system. We also have main drains adjacent to the site, therefore any works involving these drains would require the consent of the Board.
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiversity?	0	No impact on protected sites and species (or impacts could be mitigated). The 'Cambridge Road Willow Pollards' County Wildlife Site lies approximately 55m to the west of the site.
	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	0	Assumptions for a neutral impact are that existing features that warrant retention can be retained or appropriate mitigation will be achieved through the development process.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process.

Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	-/---	Minor Negative Impact (Development conflicts with landscape character, minor negative impacts incapable of mitigation) - The site is somewhat separated from the built up area of Waterbeach by strong boundaries and does not relate well to the built-up part of the village and clearly performs Green Belt functions. It may be possible to mitigate the impacts of a smaller scale of development along the Cambridge Road frontage.
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	-/---	Minor Negative Impact (development conflicts with townscape character, minor negative impacts incapable of mitigation) - The site is somewhat separated from the built up area of Waterbeach by strong boundaries and does not relate well to the built-up part of the village and clearly performs Green Belt functions. It may be possible to mitigate the impacts of a smaller scale of development along the Cambridge Road frontage.
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	-	Minor Negative Impact on historic Assets (incapable of satisfactory mitigation) - The tower of St John's Church provides a distinctive landmark within Waterbeach, being visible from many viewpoints to the east and south of the village. The site is located adjacent to the line of the Car Dyke Roman canal. There is also evidence for Roman settlement and industry to the south, linked to the Car Dyke by a Droveaway. Archaeological potential will require further information but the assumption for a neutral impact is that it is likely appropriate mitigation can be achieved through the development process.
	Create places, spaces and buildings that work well, wear well and look good	Will it lead to developments built to a high standard of design and good place making that reflects local character?		
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	0	Standard requirements for renewables would apply.
		Will it promote energy efficiency?		
	Reduce vulnerability to future climate change effects	Will it minimise contributions to climate change through sustainable construction practices?		
		Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	0	Flood Zone 1 and no drainage issues that cannot be appropriately addressed.
		Will it minimise the likely impacts of climate change on the development through appropriate design?		
	Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?			
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?		
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?		
	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	0	Neutral impact (existing features retained or appropriate mitigation). Assumption is standard requirements for open space would apply.

Inclusive Communities - Housing	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?		
		Will it provide for housing for the ageing population?		
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	No effect on pitch or plot provision.
Inclusive Communities - Redressing inequalities and involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	0	Minor Rural Centre
		Sub-Indicator: Distance to centre	+	546m from the centre of the site to a point along Chapel Street. Services and facilities clustered around surrounding area.
		Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	0	No facilities lost, and no new facilities proposed directly as a result of the development.
		Will improve relations between people from different backgrounds or social groups?		
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will it redress inequalities?		
		Will it increase the ability of people to influence decisions, including 'hard to reach' groups?		
Encourage and enable the active involvement of local people in community activities	Will it encourage engagement with community activities?	0	No facilities lost, and no new facilities proposed directly as a result of the development.	

Economic Activity	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	0	Development would have no effect on employment land or premises.
		Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	Development would have no effect on vitality or viability of existing centres. The indicator is likely to apply particularly to sites which include retail, offices, or leisure uses.
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it encourage the rural economy and diversification, and support sustainable tourism?		
		Will it contribute to providing a range of employment opportunities, in accessible locations?	+	21.93 minutes from site to nearest employment area with 2000+ employees. 5 employment areas with 2000+ employees that can be accessed in less than 30mins - 1.6km walk.
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve the level of investment in key community services and infrastructure, including broadband?	+++ / +	Development can use existing capacity in utilities infrastructure. However, there is insufficient spare mains water capacity within the distribution zone to supply the number of proposed properties which could arise if all the SHLAA sites within the zone were to be developed. The sewerage network is approaching capacity and will require investigation and possibly mitigation.
		Will it improve access to education and training, and support provision of skilled employees to the economy?	- / ---	Insufficient spare school capacity but potential for improvement to meet needs. Insufficient primary and secondary school capacity.

Transport	Reduce the need to travel and promote more sustainable transport choices.	Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	+	Total score of 16.
		Sub-indicator: Distance to bus stop / rail station	+++	240m ACF from the centre of the site to the nearest bus stop (9 service).
		Sub-indicator: Frequency of Public Transport	-	9 service - Hourly service.
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	+	9 service - 25 Minutes from Waterbeach to Cambridge.
		Sub-indicator: Distance for cycling to City Centre or Market Town	+	7.81km ACF from the centre of the site to Cambridge Market.
		Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	0
	Will it make the transport network safer for and promote use of non-motorised modes?		+?	The Highway Authority will require new development to provide or contribute to the provision of infrastructure to encourage more sustainable transport links both on and off site. Provision or contribution from this site would result in minor improvement to public transport, walking or cycling facilities.

Site No. Site 203
Address Land off Duck End, Girton
Location Girton
Category of site Group Village
Site area 3.41

Theme	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	0	No previously developed land.
		Will it use land efficiently?		
		Will it protect and enhance the best and most versatile agricultural land?	0	Development would not affect best and most versatile agricultural land (Grades 1 and 2).
		Will it avoid the sterilisation of economic mineral reserves? Will it minimise the degradation/loss of soils due to new development?	0	Site not within an area designated in the Minerals and Waste LDF.
	Minimise waste production and support the reuse and recycling of waste products	Will it encourage reduction in household waste, and increase waste recovery and recycling?		
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	0	Development unlikely to impact on air quality. Site lies in an area where air quality acceptable.
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	0	Development compatible with neighbouring uses. Some potential for traffic noise from A14, but should be possible to mitigate. The site is to the east of the A14 and prevailing winds from the south west.
		Will it minimise, and where possible address, land contamination?	0	Development not on land likely to be contaminated.
		Will it protect and where possible enhance the quality of the water environment?	0	Assumptions for a neutral impact are that appropriate standards and pollution control measures will be achieved through the development process, e.g. as part of Sustainable Drainage Systems (Suds).
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiversity?	0	No impact on protected sites and species (or impacts could be mitigated).
	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	0	Assumptions for a neutral impact are that existing features that warrant retention can be retained or appropriate mitigation will be achieved through the development process.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process.

Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	---	Significant Negative Impact (Development conflicts with landscape character, with significant negative impacts incapable of mitigation) - The site is characterised as being within an area of enclosed arable fields and mature hedgerows, which provide a soft village edge and transition to open arable farmland. Development of the scale proposed will be harmful to the small scale, intimate and rural character of Duck End, and will erode the buffer that currently exists between the edge of the village and Huntingdon Road, and therefore the purposes and functions of the Green Belt.
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	---	Significant Negative Impact (Development conflicts with townscape character, with significant negative impacts incapable of mitigation) - Significant adverse impact on Green Belt purposes and functions - will erode the buffer that currently exists between the edge of the village and Huntingdon Road, small scale and intimate character of Duck End. Adjacent to a historically sensitive part of the village and will impact on the setting of several Listed Buildings.
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	---	Significant Negative Impact on historic Assets (incapable of satisfactory mitigation) - Impact on setting of several Grade II Listed Buildings in Duck End. Archaeological potential will require further information but it is likely appropriate mitigation can be achieved through the development process
	Create places, spaces and buildings that work well, wear well and look good	Will it lead to developments built to a high standard of design and good place making that reflects local character?		
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	0	Standard requirements for renewables would apply.
		Will it promote energy efficiency?		
		Will it minimise contributions to climate change through sustainable construction practices?		
	Reduce vulnerability to future climate change effects	Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	0	Flood Zone 1 and no drainage issues that cannot be appropriately addressed. A very small part of the site is within the flood zones 2 and 3, but this would not affect development of the site.
		Will it minimise the likely impacts of climate change on the development through appropriate design?		
		Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?		
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?		
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?		
	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	0	Neutral impact (existing features retained or appropriate mitigation).

Inclusive Communities - Housing	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?		
		Will it provide for housing for the ageing population?		
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	No effect on pitch or plot provision.
Inclusive Communities - Redressing Inequalities and Involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	-	Group Village
		Sub-Indicator: Distance to centre	0	640m from the centre of the site to the village hall (Cotton Hall), central to the other services and facilities within the village.
		Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	0	No facilities lost, and no new facilities proposed directly as a result of the development.
		Will improve relations between people from different backgrounds or social groups?		
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will it redress inequalities?		
		Will it increase the ability of people to influence decisions, including 'hard to reach' groups?		
Encourage and enable the active involvement of local people in community activities	Will it encourage engagement with community activities?	0	No facilities lost, and no new facilities proposed directly as a result of the development.	

Economic Activity		Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	0	Development would have no effect on employment land or premises.
	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	Development would have no effect on vitality or viability of existing centres. The indicator is likely to apply particularly to sites which include retail, offices, or leisure uses.
		Will it encourage the rural economy and diversification, and support sustainable tourism?		
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it contribute to providing a range of employment opportunities, in accessible locations?	+	20.50 minutes from site to nearest employment area with 2000+ employees. 5 employment areas with 2000+ employees that can be accessed in less than 30mins - 1.6km walk.
		Will it improve the level of investment in key community services and infrastructure, including broadband?	-	Minor Utilities Infrastructure improvements required, but constraints can be addressed. There is insufficient spare mains water capacity within the distribution zone to supply the number of proposed properties which could arise if all the SHLAA sites within the zone were to be developed. The WWTW is operating close to capacity and the sewerage network is at capacity and both will require mitigation.
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve access to education and training, and support provision of skilled employees to the economy?	-	School capacity not sufficient, but significant issues can be adequately addressed

Transport	Reduce the need to travel and promote more sustainable transport choices.	Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	+++	Total score of 20.
		Sub-indicator: Distance to bus stop / rail station	+	550m ACF from the centre of the site to the nearest bus stop.
		Sub-indicator: Frequency of Public Transport	+	20 minute service.
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	+++	16 minutes from Girton to Cambridge.
		Sub-indicator: Distance for cycling to City Centre or Market Town	+++	4.48km ACF from the centre of the site to Cambridge Market.
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	-	Minor negative effects incapable of mitigation. Access constraints - The Highway Authority has concerns with regards to the intensification of Wash Pit Road.
		Will it make the transport network safer for and promote use of non-motorised modes?	0	No impact.

Site No. Site 204
Address Land to the rear of Green Street, Willingham
Location Willingham
Category of site Minor Rural Centre
Site area 2.6

Theme	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	+	Approximately 1/3 of the site is previously developed land - the site includes a number of existing residential properties and business uses, as well as gardens, agricultural buildings and scrub land to the rear.
		Will it use land efficiently?		
		Will it protect and enhance the best and most versatile agricultural land?	0	Development would not affect best and most versatile agricultural land (Grades 1 and 2).
		Will it avoid the sterilisation of economic mineral reserves? Will it minimise the degradation/loss of soils due to new development?	0	Site not within an area designated in the Minerals and Waste LDF.
	Minimise waste production and support the reuse and recycling of waste products	Will it encourage reduction in household waste, and increase waste recovery and recycling?		
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	0	Development unlikely to impact on air quality. Site lies in an area where air quality acceptable.
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	0 / -	Development compatible with neighbouring uses. Possible noise from existing green houses / nurseries to the east but noise sources not quantified.
		Will it minimise, and where possible address, land contamination?	+	Part of the site was formerly used for agricultural / commercial use and may have contaminated land. Potential for minor benefits through remediation of minor contamination
		Will it protect and where possible enhance the quality of the water environment?	0	Assumptions for a neutral impact are that appropriate standards and pollution control measures will be achieved through the development process, e.g. as part of Sustainable Drainage Systems (Suds).
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiversity?	0	No impact on protected sites and species (or impacts could be mitigated).
	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	0	Assumptions for a neutral impact are that existing features that warrant retention can be retained or appropriate mitigation will be achieved through the development process.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process.

Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	-	Minor Negative Impact (Development conflicts with landscape character, minor negative impacts incapable of mitigation) - The site is split in character, between its residential frontage and the green, open space to its rear, bordering the agricultural land beyond. The character of the open land to the east and behind these houses, is a patchwork of small fields and rural land uses, very much part of the countryside and characteristic of the area.
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	---	Significant Negative Impact (Development conflicts with townscape character, with significant negative impacts incapable of mitigation) - The site is split in character, between its residential frontage and the green, open space to its rear, bordering the agricultural land beyond. The site is rural in character. Development in this location would create an area of backland development in an area characterised by ribbon development, having a detrimental impact on the character of this part of the village and to the detriment of Listed Buildings. It would also harm the setting of the wider Conservation Area and the adjacent Protected Village Amenity Area.
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	---	Significant Negative Impact (Development conflicts with townscape character, with significant negative impacts incapable of mitigation) - The site contains 2 Grade II Listed Buildings and part of the site is within the Willingham Conservation Area. Development would have a direct major adverse effect on these as well as impacting on the wider setting of the Conservation Area and other Listed Buildings, and resulting in intensification of the street frontage, including for access, likely loss of significant heritage assets, loss of historic burgage plots and depth of development contrary to single depth character of the area and north of site. Archaeological potential will require further information but the assumption for a neutral impact is that it is likely appropriate mitigation can be achieved through the development process.
	Create places, spaces and buildings that work well, wear well and look good	Will it lead to developments built to a high standard of design and good place making that reflects local character?		
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	0	Standard requirements for renewables would apply.
		Will it promote energy efficiency?		
		Will it minimise contributions to climate change through sustainable construction practices?		
	Reduce vulnerability to future climate change effects	Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	0	Flood Zone 1 and no drainage issues that cannot be appropriately addressed.
		Will it minimise the likely impacts of climate change on the development through appropriate design?		
Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?				
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?		
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?		
	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	+	Development would create minor opportunities for new public open space as the promoter proposes provision of open space as part of the development.

Inclusive Communities - Housing	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?		
		Will it provide for housing for the ageing population?		
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	No effect on pitch or plot provision.
Inclusive Communities - Redressing Inequalities and Involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	0	Minor Rural Centre
		Sub-Indicator: Distance to centre	+	582m ACF to the High Street - location chosen as representation of central point of these services and facilities.
		Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	0	No facilities lost, and no new facilities proposed directly as a result of the development.
		Will improve relations between people from different backgrounds or social groups?		
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will it redress inequalities?		
		Will it increase the ability of people to influence decisions, including 'hard to reach' groups?		
Encourage and enable the active involvement of local people in community activities	Will it encourage engagement with community activities?	0	No facilities lost, and no new facilities proposed directly as a result of the development.	

Economic Activity		Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	-	Development would have a minor negative effect on employment opportunities, as a result of the loss of existing employment land.
	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	Development would have no effect on vitality or viability of existing centres. The indicator is likely to apply particularly to sites which include retail, offices, or leisure uses.
		Will it encourage the rural economy and diversification, and support sustainable tourism?		
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it contribute to providing a range of employment opportunities, in accessible locations?	+	21.67 minutes from site to nearest employment area with 2000+ employees. 3 employment areas with 2000+ employees can be accessed in less than 30mins - 1.6km walk.
		Will it improve the level of investment in key community services and infrastructure, including broadband?	+++	Development can use existing capacity in utilities infrastructure. However, the sewerage network is approaching capacity and will require investigation and possibly mitigation.
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve access to education and training, and support provision of skilled employees to the economy?	-	Insufficient spare school capacity but potential for improvement to meet needs. Insufficient secondary school capacity.

Transport	Reduce the need to travel and promote more sustainable transport choices.	Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	0	Total score of 13.
		Sub-indicator: Distance to bus stop / rail station	+	405m ACF from the centre of the site to nearest bus stop (Citi 5).
		Sub-indicator: Frequency of Public Transport	-	Citi 5 has an hourly service.
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	0	Citi 5 Bus service takes 41 minutes from Willingham to Cambridge. Citi 5 Bus service takes 38 minutes from Willingham to St. Ives.
		Sub-indicator: Distance for cycling to City Centre or Market Town	+	9.46km ACF from the centre of the site to St. Ives Market.
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	--- / -	Insufficient capacity or access constraints that cannot be adequately mitigated. The Highways Agency comment that this site is in an area heavily reliant on the A14 for strategic access. It is difficult to see more than a small proportion of these sites being deliverable prior to major improvements to the A14, and even this could require substantial mitigation measures.
		Will it make the transport network safer for and promote use of non-motorised modes?	+	The Highway Authority will require new development to provide or contribute to the provision of infrastructure to encourage more sustainable transport links both on and off site. Provision or contribution from this site would result in minor improvement to public transport, walking or cycling facilities.

Site No. Site 205
Address Land north-west of 11 Cambridge Road, Great Shelford
Location Great Shelford & Stapleford
Category of site Rural Centre
Site area 1.41

Theme	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	0	No previously developed land.
		Will it use land efficiently?		
		Will it protect and enhance the best and most versatile agricultural land?	-	Minor loss of best and most versatile agricultural land (Grades 1 and 2) - small site but all Grade 2.
		Will it avoid the sterilisation of economic mineral reserves? Will it minimise the degradation/loss of soils due to new development?	0	Site not within an area designated in the Minerals and Waste LDF.
	Minimise waste production and support the reuse and recycling of waste products	Will it encourage reduction in household waste, and increase waste recovery and recycling?		
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	0	Development unlikely to impact on air quality. Site lies in an area where air quality acceptable.
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	0/-	Development compatible with neighbouring uses. Noise from Cambridge Road can be mitigated by design and layout, which may influence density. A noise assessment of the electricity substation in the northwest corner needs to be undertaken.
		Will it minimise, and where possible address, land contamination?	0	Development not on land likely to be contaminated.
		Will it protect and where possible enhance the quality of the water environment?	0	Development unlikely to effect water quality. Assumptions for a neutral impact are that appropriate standards and pollution control measures will be achieved through the development process, e.g. as part of Sustainable Drainage Systems (SuDS).
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiversity?	0	No impact on protected sites and species (or impacts could be mitigated).
	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	+	Minor positive impact as there are some opportunities for enhancement through the provision of wildflower meadows, small copse planting, and ponds which would compliment the large adjacent ponds (reported to be habitat for great crested newts).
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process.

Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	-	Minor negative impact (development conflicts with landscape character, minor negative impacts incapable of mitigation) - development of this site would result in further encroachment of the built area into the transitional area of enclosed fields that provide a softer edge to the village.
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	---	Significant negative impact (development conflicts with townscape character, significant negative impacts incapable of mitigation) - development of this site would change the linear character of this area of village and the site is part of an Important Countryside Frontage.
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	---	Significant negative impact on historic assets (incapable of satisfactory mitigation) - the site is part of the settings of listed buildings and the Great Shelford Conservation Area. Archaeological potential will require further information but it is likely appropriate mitigation can be achieved through the development process.
	Create places, spaces and buildings that work well, wear well and look good	Will it lead to developments built to a high standard of design and good place making that reflects local character?		
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	0	Standard requirements for renewables would apply.
		Will it promote energy efficiency?		
		Will it minimise contributions to climate change through sustainable construction practices?		
	Reduce vulnerability to future climate change effects	Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	0	Flood Zone 1 and no drainage issues that cannot be appropriately addressed.
		Will it minimise the likely impacts of climate change on the development through appropriate design?		
		Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?		
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?		
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?		

Inclusive Communities - Housing	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	0	Neutral impact (existing features retained or appropriate mitigation).
	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?		
		Will it provide for housing for the ageing population?		
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	No effect on pitch or plot provision.
Inclusive Communities - Redressing inequalities and involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	+	Rural Centre.
		Sub-Indicator: Distance to centre	-	861m ACF to Woollards Lane which is surrounded by a large number of services and facilities.
		Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	0	No facilities lost, and no new facilities proposed directly as a result of the development.
		Will improve relations between people from different backgrounds or social groups?		
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will it redress inequalities?		
		Will it increase the ability of people to influence decisions, including 'hard to reach' groups?		
	Encourage and enable the active involvement of local people in community activities	Will it encourage engagement with community activities?	0	No facilities lost, and no new facilities proposed directly as a result of the development.

Economic Activity		Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	0	Development would have no effect on employment land or premises.
	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	Development would have no effect on vitality or viability of existing centres. The indicator is likely to apply particularly to sites which include retail, offices, or leisure uses.
		Will it encourage the rural economy and diversification, and support sustainable tourism?		
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it contribute to providing a range of employment opportunities, in accessible locations?	+	17.75 minutes from site to nearest employment area with 2000+ employees. 7 employment areas with 2000+ employees that can be accessed in less than 30mins - 1.6km walk.
		Will it improve the level of investment in key community services and infrastructure, including broadband?	+	Minor utilities infrastructure improvements required, but constraints can be addressed. There is insufficient spare mains water capacity within the distribution zone to supply the number of proposed properties which could arise if all the SHLAA sites within the zone were to be developed. The sewerage network is approaching capacity.
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve access to education and training, and support provision of skilled employees to the economy?	-	School capacity not sufficient, but significant issues can be adequately addressed.

Transport	Reduce the need to travel and promote more sustainable transport choices.	Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	+	Total score of 17.
		Sub-indicator: Distance to bus stop / rail station	+++	103m ACF from the centre of the site to nearest bus stop (Citi 7). 820m ACF from the centre of the site to train station.
		Sub-indicator: Frequency of Public Transport	+	Bus has a 20 minute service. Train has an 30 minute to hourly service.
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	0	Bus service takes 33 minutes from Great Shelford to Cambridge. Train service takes 5-11 minutes from Great Shelford to Cambridge.
		Sub-indicator: Distance for cycling to City Centre or Market Town	+	5.77km ACF from the centre of the site to Cambridge Market.
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	0	No capacity constraints identified, safe access can be achieved.
		Will it make the transport network safer for and promote use of non-motorised modes?	0	No impact.

Site No. Site 206
Address Land at Bannold Road and Bannold Drive, Waterbeach
Location Waterbeach
Category of site Minor Rural Centre
Site area 1.77

Theme	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	0	The site includes several residential properties.
		Will it use land efficiently?		
		Will it protect and enhance the best and most versatile agricultural land?	0	Development would not affect best and most versatile agricultural land (Grades 1 and 2).
		Will it avoid the sterilisation of economic mineral reserves? Will it minimise the degradation/loss of soils due to new development?	0	Most of the site is within an area designated in the Minerals and Waste LDF but development would not have a negative impact
	Minimise waste production and support the reuse and recycling of waste products	Will it encourage reduction in household waste, and increase waste recovery and recycling?		
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	0	Development unlikely to impact on air quality. Site lies in an area where air quality acceptable.
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	-	Development compatible with neighbouring uses. Some minor to moderate additional road traffic noise generation impact on existing residential due to development related car movements but dependent on location of site entrance. Possible noise and malodour from Barton Ley & Midload Farm immediately to the east as proposals would be closer than existing residential. No history of complaints but noise sources etc. have not been quantified. Minor to moderate noise / odour risk.
		Will it minimise, and where possible address, land contamination?	0	Development not on land likely to be contaminated
		Will it protect and where possible enhance the quality of the water environment?	0	Assumptions for a neutral impact are that appropriate standards and pollution control measures will be achieved through the development process, e.g. as part of Sustainable Drainage Systems (Suds). A majority of the development sites falls within the Waterbeach Level Internal Drainage District, which does not have any capacity to accept any direct discharge into its system above the green field run off rate. All surface water from the site would have to be balanced before it is released into the Boards system. We also have main drains adjacent to the site, therefore any works involving these drains would require the consent of the Board.
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiversity?	0	No impact on protected sites and species (or impacts could be mitigated). There is a group of protected trees located 290m to the west.
	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	0	Assumptions for a neutral impact are that existing features that warrant retention can be retained or appropriate mitigation will be achieved through the development process.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process.

Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	-	Minor Negative Impact (Development conflicts with landscape character, minor negative impacts incapable of mitigation) - To the east the village edge comprises enclosed fields and paddocks, with well used footpaths to the banks of the River Cam. The site is characterised as enclosed farmland. There is a well defined edge along Bannold Road, with views north across flat rough grassland to housing along Kirby Road. The site is located in a relatively open area separating the village from the Barracks to the north. It is in agricultural use with dense hedgerow, particularly along the road frontages. Bannold Road has sporadic development along the northern side and this, together with the open land, creates a rural character and the appearance of the countryside entering the village.
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	-	Minor Negative Impact (development conflicts with townscape character, minor negative impacts incapable of mitigation) - The site is located in a relatively open area separating the village from the Barracks to the north. It is in residential and agricultural use with mature trees along Bannold Road. Bannold Road has sporadic development along the northern side and this, together with the open land, creates a rural character and the appearance of the countryside entering the village, as demonstrated by the planning appeal (see planning history). If this site were developed it would intrude into the rural separation area between Waterbeach and the Barracks.
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	0	Neutral impact (existing features retained, or appropriate mitigation possible). The tower of St John's Church provides a distinctive landmark within Waterbeach, being visible from many viewpoints to the east and south of the village. Archaeological potential will require further information but the assumption for a neutral impact is that it is likely appropriate mitigation can be achieved through the development process.
	Create places, spaces and buildings that work well, wear well and look good	Will it lead to developments built to a high standard of design and good place making that reflects local character?		
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	0	Standard requirements for renewables would apply.
		Will it promote energy efficiency?		
		Will it minimise contributions to climate change through sustainable construction practices?		
	Reduce vulnerability to future climate change effects	Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	0	Flood Zone 1 and no drainage issues that cannot be appropriately addressed. A very small part of the south east corner of the site is within Flood Zone 2.
		Will it minimise the likely impacts of climate change on the development through appropriate design?		
Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?				

Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?		
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?		
Inclusive Communities - Housing	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	0	Neutral impact (existing features retained or appropriate mitigation). Assumption is standard requirements for open space would apply.
	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?		
		Will it provide for housing for the ageing population?		
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	No effect on pitch or plot provision.
Inclusive Communities - Redressing inequalities and involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	0	Minor Rural Centre
		Sub-Indicator: Distance to centre	-	908m from the centre of the site to a point along Chapel Street. Services and facilities clustered around surrounding area.
		Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	0	No facilities lost, and no new facilities proposed directly as a result of the development.
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will improve relations between people from different backgrounds or social groups?		
		Will it redress inequalities?		
	Encourage and enable the active involvement of local people in community activities	Will it increase the ability of people to influence decisions, including 'hard to reach' groups?		
		Will it encourage engagement with community activities?	0	No facilities lost, and no new facilities proposed directly as a result of the development.
		Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	0	Development would have no effect on employment land or premises.

Economic Activity	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	Development would have no effect on vitality or viability of existing centres. The indicator is likely to apply particularly to sites which include retail, offices, or leisure uses.
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it encourage the rural economy and diversification, and support sustainable tourism?		
		Will it contribute to providing a range of employment opportunities, in accessible locations?	+	25.21 minutes from site to nearest employment area with 2000+ employees. 4 employment areas with 2000+ employees that can be accessed in less than 30mins - 1.6km walk.
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve the level of investment in key community services and infrastructure, including broadband?	+++ / +	Development can use existing capacity in utilities infrastructure. However, there is insufficient spare mains water capacity within the distribution zone to supply the number of proposed properties which could arise if all the SHLAA sites within the zone were to be developed. The sewerage network is approaching capacity and will require investigation and possibly mitigation.
		Will it improve access to education and training, and support provision of skilled employees to the economy?	- / ---	Insufficient spare school capacity but potential for improvement to meet needs. Insufficient primary and secondary school capacity.

Transport	Reduce the need to travel and promote more sustainable transport choices.	Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	0	Total score of 13.
		Sub-indicator: Distance to bus stop / rail station	0	762m ACF from the centre of the site to the nearest bus stop (196 service). 457m ACF from the centre of the site to the nearest bus stop (9 service).
		Sub-indicator: Frequency of Public Transport	-	196 service - less than hourly. 9 service - Hourly service.
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	+	196 service - 44 Minutes from Waterbeach to Cambridge. 9 service - 25 Minutes from Waterbeach to Cambridge.
		Sub-indicator: Distance for cycling to City Centre or Market Town	+	9.20km ACF from the centre of the site to Cambridge Market.
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	0	No capacity constraints identified, safe access can be achieved. On the whole, the in-fill sites are less likely to present an unacceptable pressure on the A14 given the majority of travel demand will be focused on Cambridge and credible alternatives to car travel could be available.
		Will it make the transport network safer for and promote use of non-motorised modes?	0	No impact.

Site No. Site 207
Address Land east of Hinton Way, north of Mingle Lane, Great Shelford
Location Great Shelford & Stapleford
Category of site Rural Centre
Site area 10.04

Theme	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	0	No previously developed land.
		Will it use land efficiently?		
		Will it protect and enhance the best and most versatile agricultural land?	-	Minor loss of best and most versatile agricultural land (Grades 1 and 2) - small site including Grade 2.
		Will it avoid the sterilisation of economic mineral reserves? Will it minimise the degradation/loss of soils due to new development?	0	Site not within an area designated in the Minerals and Waste LDF.
	Minimise waste production and support the reuse and recycling of waste products	Will it encourage reduction in household waste, and increase waste recovery and recycling?		
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	0	Development unlikely to impact on air quality. Site lies in an area where air quality acceptable.
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	0/-	Development compatible with neighbouring uses. Some minor to moderate additional road traffic noise generation on existing residential due to development related car movements but dependent on location of site entrance - Mingle Lane.
		Will it minimise, and where possible address, land contamination?	0	Development not on land likely to be contaminated.
		Will it protect and where possible enhance the quality of the water environment?	0	Development unlikely to effect water quality. Assumptions for a neutral impact are that appropriate standards and pollution control measures will be achieved through the development process, e.g. as part of Sustainable Drainage Systems (SuDS).
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiversity?	0	No impact on protected sites and species (or impacts could be mitigated).
	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	+	Minor positive impact as there are some opportunities for habitat enhancement through copse planting to compliment the woodland feel of the adjacent cemetery the retention and enhancement of the scrubland, and additional hedgerow planting.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process.

Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	---	Significant negative impact (development conflicts with landscape character, with significant negative impacts incapable of mitigation) - development of this site would result in considerable encroachment of built development into the strongly rolling chalk hills rising from the village edge.
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	---	Significant negative impact (development conflicts with townscape character, significant negative impacts incapable of mitigation) - development of this site would create development contrary to the ribbon development character of this part of the village.
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	-	Minor negative impact on historic assets (incapable of satisfactory mitigation) – site forms part of the setting of the Great Shelford Conservation Area. Archaeological potential will require further information but the assumption for a neutral impact is that it is likely appropriate mitigation can be achieved through the development process.
	Create places, spaces and buildings that work well, wear well and look good	Will it lead to developments built to a high standard of design and good place making that reflects local character?		
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	0	Standard requirements for renewables would apply.
		Will it promote energy efficiency?		
		Will it minimise contributions to climate change through sustainable construction practices?		
	Reduce vulnerability to future climate change effects	Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	0	Flood Zone 1 and no drainage issues that cannot be appropriately addressed.
		Will it minimise the likely impacts of climate change on the development through appropriate design?		
Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?				
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?		
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?		

Inclusive Communities - Housing	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	+/0	Development would create minor opportunities for new public open space.
	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?		
		Will it provide for housing for the ageing population?		
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	No effect on pitch or plot provision.
Inclusive Communities - Redressing inequalities and involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	+	Rural Centre.
		Sub-Indicator: Distance to centre	---	1,040m ACF to Woollards Lane which is surrounded by a large number of services and facilities.
		Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	0	No facilities lost, and no new facilities proposed directly as a result of the development.
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will improve relations between people from different backgrounds or social groups?		
		Will it redress inequalities?		
		Will it increase the ability of people to influence decisions, including 'hard to reach' groups?		
	Encourage and enable the active involvement of local people in community activities	Will it encourage engagement with community activities?	0	No facilities lost, and no new facilities proposed directly as a result of the development.

Economic Activity		Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	0	Development would have no effect on employment land or premises.
	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	Development would have no effect on vitality or viability of existing centres. The indicator is likely to apply particularly to sites which include retail, offices, or leisure uses.
		Will it encourage the rural economy and diversification, and support sustainable tourism?		
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it contribute to providing a range of employment opportunities, in accessible locations?	+	17.19 minutes from site to nearest employment area with 2000+ employees. 5 employment areas with 2000+ employees that can be accessed in less than 30mins - 1.6km walk.
		Will it improve the level of investment in key community services and infrastructure, including broadband?	+	Minor utilities infrastructure improvements required, but constraints can be addressed. There is insufficient spare mains water capacity within the distribution zone to supply the number of proposed properties which could arise if all the SHLAA sites within the zone were to be developed. The sewerage network is approaching capacity.
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve access to education and training, and support provision of skilled employees to the economy?	-	School capacity not sufficient, but significant issues can be adequately addressed.

Transport	Reduce the need to travel and promote more sustainable transport choices.	Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	+	Total score of 16-17.
		Sub-indicator: Distance to bus stop / rail station	+	290m ACF from the centre of the site to nearest bus stop (31 Service). 573m ACF from the centre of the site to train station.
		Sub-indicator: Frequency of Public Transport	0 / -	Bus has a less than hourly service. Train has an 30 minute to hourly service.
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	+++	Bus service takes 24 minutes from Great Shelford to Cambridge. Train service takes 5-11 minutes from Great Shelford to Cambridge.
		Sub-indicator: Distance for cycling to City Centre or Market Town	+	6.36km ACF from the centre of the site to Cambridge Market.
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	-/-	Minor negative effects incapable of mitigation. Access constraints - the proposed access is unsuitable to serve the number of units that are being proposed and does not allow for suitable inter vehicle visibility splay for this site.
		Will it make the transport network safer for and promote use of non-motorised modes?	0	No impact.

Site No. Site 208
Address Land to the north of Gog Magog Way, Stapleford
Location Great Shelford & Stapleford
Category of site Rural Centre
Site area 0.32

Theme	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	0	No previously developed land.
		Will it use land efficiently?		
		Will it protect and enhance the best and most versatile agricultural land?	-	Minor loss of best and most versatile agricultural land (Grades 1 and 2) - northern half of site is Grade 2.
		Will it avoid the sterilisation of economic mineral reserves? Will it minimise the degradation/loss of soils due to new development?	0	Site not within an area designated in the Minerals and Waste LDF.
	Minimise waste production and support the reuse and recycling of waste products	Will it encourage reduction in household waste, and increase waste recovery and recycling?		
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	0	Development unlikely to impact on air quality. Site lies in an area where air quality acceptable.
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	0	Development compatible with neighbouring uses.
		Will it minimise, and where possible address, land contamination?	0	Development not on land likely to be contaminated
		Will it protect and where possible enhance the quality of the water environment?	0	Development unlikely to affect water quality. Assumptions for a neutral impact are that appropriate standards and pollution control measures will be achieved through the development process. e.g. as part of Sustainable Drainage Systems (Suds).
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiversity?	0	No impact on protected sites and species (or impacts could be mitigated).
	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	0	Assumptions for a neutral impact are that existing features that warrant retention can be retained or appropriate mitigation will be achieved through the development process.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process.

Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	-	Minor Negative Impact (Development conflicts with landscape character, minor negative impacts incapable of mitigation) -I. The site is enclosed farmland. The road adjoining the site has high hedgerows on both sides with mature trees and is rural in character. Development of the site would be likely to impact on this green character
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	-	Minor Negative Impact (development conflicts with townscape character, minor negative impacts incapable of mitigation) - Loss of mature hedgerow if site developed therefore altering townscape character of area.
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	-	Minor Negative Impact on historic Assets (incapable of satisfactory mitigation) – site forms an important part of the setting of Grade II Listed building - loss of openness and rural setting. Archaeological potential will require further information but the assumption for a neutral impact is that it is likely appropriate mitigation can be achieved through the development process.
	Create places, spaces and buildings that work well, wear well and look good	Will it lead to developments built to a high standard of design and good place making that reflects local character?		
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	0	Standard requirements for renewables would apply.
		Will it promote energy efficiency?		
		Will it minimise contributions to climate change through sustainable construction practices?		
	Reduce vulnerability to future climate change effects	Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	0	Flood Zone 1 and no drainage issues that cannot be appropriately addressed
		Will it minimise the likely impacts of climate change on the development through appropriate design?		
		Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?		
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?		
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?		

Inclusive Communities - Housing	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	0	Neutral impact (existing features retained or appropriate mitigation).
	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?		
		Will it provide for housing for the ageing population?		
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	No effect on pitch or plot provision.
Inclusive Communities - Redressing inequalities and involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	+	Rural Centre
		Sub-Indicator: Distance to centre	---	1,477m ACF to Woollards Lane, Stapleford which is surrounded by a large number of services and facilities.
		Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	0	No facilities lost, and no new facilities proposed directly as a result of the development.
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will improve relations between people from different backgrounds or social groups?		
		Will it redress inequalities?		
		Will it increase the ability of people to influence decisions, including 'hard to reach' groups?		
	Encourage and enable the active involvement of local people in community activities	Will it encourage engagement with community activities?	0	No facilities lost, and no new facilities proposed directly as a result of the development.

Economic Activity		Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	0	Development would have no effect on employment land or premises.
	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	Development would have no effect on vitality or viability of existing centres. The indicator is likely to apply particularly to sites which include retail, offices, or leisure uses.
		Will it encourage the rural economy and diversification, and support sustainable tourism?		
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it contribute to providing a range of employment opportunities, in accessible locations?	+	17.05 minutes from site to nearest employment area with 2000+ employees. 5 employment areas with 2000+ employees that can be accessed in less than 30mins - 1.6km walk.
		Will it improve the level of investment in key community services and infrastructure, including broadband?	+	Minor Utilities Infrastructure improvements required, but constraints can be addressed. There is insufficient spare mains water capacity within the distribution zone to supply the number of proposed properties which could arise if all the SHLAA sites within the zone were to be developed. The sewage network is approaching capacity.
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve access to education and training, and support provision of skilled employees to the economy?	-	School capacity not sufficient, but significant issues can be adequately addressed

Transport	Reduce the need to travel and promote more sustainable transport choices.	Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	0	Total score of 14
		Sub-indicator: Distance to bus stop / rail station	0	151m ACF from the centre of the site to nearest bus stop (31 service). 759m ACF from the centre of the site to nearest bus stop (Citi 7 service).
		Sub-indicator: Frequency of Public Transport	+	31 service - 4 buses a day. Citi 7 - 20 minute service.
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	0	31 bus service takes 19 minutes from Shelford to Cambridge. Citi 7 bus service takes 36 minutes from Shelford to Cambridge.
		Sub-indicator: Distance for cycling to City Centre or Market Town	+	6.81km ACF from the centre of the site to Cambridge Market.
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	0	No capacity constraints identified, safe access can be achieved.
		Will it make the transport network safer for and promote use of non-motorised modes?	0	The Highway Authority will require new development to provide or contribute to the provision of infrastructure to encourage more sustainable transport links both on and off site. Provision or contribution from this site would result in minor improvement to public transport, walking or cycling facilities.

Site No. Site 209
Address Land north of Bogs Gap Lane, Steeple Morden
Location Steeple Morden
Category of site Group Village
Site area 0.48

Theme	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	0	No previously developed land. The site includes one residential property.
		Will it use land efficiently?		
		Will it protect and enhance the best and most versatile agricultural land?	-	Minor loss of best and most versatile agricultural land (Grades 1 and 2) - small site but all Grade 2
		Will it avoid the sterilisation of economic mineral reserves? Will it minimise the degradation/loss of soils due to new development?	0	Site not within an area designated in the Minerals and Waste LDF.
	Minimise waste production and support the reuse and recycling of waste products	Will it encourage reduction in household waste, and increase waste recovery and recycling?		
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	0	Development unlikely to impact on air quality. Site lies in an area where air quality acceptable.
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	0	Development compatible with neighbouring uses.
		Will it minimise, and where possible address, land contamination?	0	Development not on land likely to be contaminated
		Will it protect and where possible enhance the quality of the water environment?	0	Development unlikely to affect water quality. Assumptions for a neutral impact are that appropriate standards and pollution control measures will be achieved through the development process, e.g. as part of Sustainable Drainage Systems (Suds).
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiversity?	0	No impact on protected sites and species (or impacts could be mitigated).
	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	0	Assumptions for a neutral impact are that existing features that warrant retention can be retained or appropriate mitigation will be achieved through the development process.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process.

Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	-	Minor Negative Impact (Development conflicts with landscape character, minor negative impacts incapable of mitigation) Site rural in character.
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	0	Neutral impact (generally compatible, or capable of being made compatible with local townscape character). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process.
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Some impact on setting of listed buildings adjoining site. Archaeological potential will require further information but the assumption for a neutral impact is that it is likely appropriate mitigation can be achieved through the development process.
	Create places, spaces and buildings that work well, wear well and look good	Will it lead to developments built to a high standard of design and good place making that reflects local character?		
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	0	Standard requirements for renewables would apply.
		Will it promote energy efficiency?		
		Will it minimise contributions to climate change through sustainable construction practices?		
	Reduce vulnerability to future climate change effects	Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	0	Flood Zone 1 and no drainage issues that cannot be appropriately addressed.
		Will it minimise the likely impacts of climate change on the development through appropriate design?		
Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?				
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?		
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?		

Inclusive Communities - Housing	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	0	Neutral impact (existing features retained or appropriate mitigation).
	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?		
		Will it provide for housing for the ageing population?		
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	No effect on pitch or plot provision.
Inclusive Communities - Redressing inequalities and involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	-	Group Village
		Sub-Indicator: Distance to centre	-	840m from the centre of the site to Cheyney Street, opposite the school, a central point in the village surrounded by services and facilities
	Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)		0	No facilities lost, and no new facilities proposed directly as a result of the development.
		Will improve relations between people from different backgrounds or social groups?		
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will it redress inequalities?		
		Will it increase the ability of people to influence decisions, including 'hard to reach' groups?		
Encourage and enable the active involvement of local people in community activities	Will it encourage engagement with community activities?	0	No facilities lost, and no new facilities proposed directly as a result of the development.	

Economic Activity		Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	0	Development would have no effect on employment land or premises.
	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	Development would have no effect on vitality or viability of existing centres. The indicator is likely to apply particularly to sites which include retail, offices, or leisure uses.
		Will it encourage the rural economy and diversification, and support sustainable tourism?		
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it contribute to providing a range of employment opportunities, in accessible locations?	+	29.89 minutes from site to nearest employment area with 2000+ employees. Only 1 employment area with 2000+ employees that can be accessed in less than 30mins - 1.6km walk.
		Will it improve the level of investment in key community services and infrastructure, including broadband?	+	Minor Utilities Infrastructure improvements required, but constraints can be addressed. There is insufficient spare mains water capacity within the distribution zone to supply the number of proposed properties which could arise if all the SHLAA sites within the zone were to be developed. The WWTW is close to capacity and the sewerage network is approaching capacity and both will require mitigation.
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve access to education and training, and support provision of skilled employees to the economy?	-	School capacity not sufficient, but significant issues can be adequately addressed

Transport	Reduce the need to travel and promote more sustainable transport choices.	Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	0	Total score of 13.
		Sub-indicator: Distance to bus stop / rail station	+++	120m ACF from the centre of the site to the nearest bus stop.
		Sub-indicator: Frequency of Public Transport	---	Less than hourly service.
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	0	32 minutes from Steeple Morden to Royston.
		Sub-indicator: Distance for cycling to City Centre or Market Town	+	7.50km ACF from the centre of the site to Royston Market.
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	---	Insufficient capacity or access constraints that cannot be adequately mitigated. The proposed site does not appear to have a direct link to the adopted public highway.
		Will it make the transport network safer for and promote use of non-motorised modes?	0	No impact

Site No. Site 210
Address Land at the rear of Swanns Corner, Mill Lane, Whittlesford
Location Whittlesford
Category of site Group Village
Site area 0.59

Theme	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	0	No previously developed land.
		Will it use land efficiently?		
		Will it protect and enhance the best and most versatile agricultural land?	0	Development would not affect best and most versatile agricultural land (Grades 1 and 2).
	Minimise waste production and support the reuse and recycling of waste products	Will it avoid the sterilisation of economic mineral reserves? Will it minimise the degradation/loss of soils due to new development?	0	Site within an area designated in the Minerals and Waste LDF but development would not have a negative impact
		Will it encourage reduction in household waste, and increase waste recovery and recycling?		
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	0	Development unlikely to impact on air quality. Site lies in an area where air quality acceptable.
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	-	Development compatible with neighbouring uses. Commercial to south. However existing residential already in close proximity so minor to medium risk
	Will it protect and where possible enhance the quality of the water environment?	Will it minimise, and where possible address, land contamination?	0	Development not on land likely to be contaminated.
		Will it protect and where possible enhance the quality of the water environment?	0	Development unlikely to affect water quality. The site within Groundwater Source Protection Zone 2 which does not rule out development but may influence land use or require pollution control measures. Assumptions for a neutral impact are that appropriate standards and pollution control measures will be achieved through the development process and will mitigate any impact on groundwater,
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiversity?	0	No impact on protected sites and species (or impacts could be mitigated). There are protected trees within the site adjoining the course of the River Granta and to the north of within the area around the medieval moated site. Also within the grounds of Mill House to the south are protected groups of trees. There is a group of protected elm trees within the grounds of the grain store. Where the site adjoins Mill Lane there are two protected elm trees, which would be impacted if this were to be the access point for the site.
	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	0	Assumptions for a neutral impact are that existing features that warrant retention can be retained or appropriate mitigation will be achieved through the development process.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process. A footpath to the east of the site, which starts in Mill Lane and extends in a north east direction across the water meadows.

Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	---	Significant Negative Impact (Development conflicts with landscape character, with significant negative impacts incapable of mitigation) - The site forms an important part of the immediate setting a Grade II Listed Building and Conservation Area, and part of the wider setting of the Grade I Listed church. There are a number of protected trees within and adjacent to the site, which contributes to the rural character of the area.
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	---	Significant Negative Impact (Development conflicts with townscape character, with significant negative impacts incapable of mitigation) - The site forms an important part of the immediate setting a Grade II Listed Building and Conservation Area, and part of the wider setting of the Grade I Listed church. There are a number of protected trees within and adjacent to the site, which contributes to the rural character of the area.
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	---	Significant Negative Impact on historic Assets (incapable of satisfactory mitigation) - The site forms an important part of the immediate setting a Grade II Listed Building and Conservation Area, and part of the wider setting of the Grade I Listed church. Archaeological potential will require further information but it is likely appropriate mitigation can be achieved through the development process.
	Create places, spaces and buildings that work well, wear well and look good	Will it lead to developments built to a high standard of design and good place making that reflects local character?		
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	0	Standard requirements for renewables would apply.
		Will it promote energy efficiency?		
		Will it minimise contributions to climate change through sustainable construction practices?		
	Reduce vulnerability to future climate change effects	Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	0	Flood Zone 1 and no drainage issues that cannot be appropriately addressed.
		Will it minimise the likely impacts of climate change on the development through appropriate design?		
		Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?		
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?		
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?		

Inclusive Communities - Housing	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	0	Neutral impact (existing features retained or appropriate mitigation). Assumption is standard requirements for open space would apply.
	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?		
		Will it provide for housing for the ageing population?		
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	No effect on pitch or plot provision.
Inclusive Communities - Redressing inequalities and involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	-	Group village
		Sub-Indicator: Distance to centre	+	448m from the centre of the site to Whittlesford Post Office, a central point in the village surrounded by services and facilities.
		Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	0	No facilities lost, and no new facilities proposed directly as a result of the development.
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will improve relations between people from different backgrounds or social groups?		
		Will it redress inequalities?		
		Will it increase the ability of people to influence decisions, including 'hard to reach' groups?		
Encourage and enable the active involvement of local people in community activities	Will it encourage engagement with community activities?	0	No facilities lost, and no new facilities proposed directly as a result of the development.	

Economic Activity		Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	0	Development would have no effect on employment land or premises.
	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	Development would have no effect on vitality or viability of existing centres. The indicator is likely to apply particularly to sites which include retail, offices, or leisure uses.
		Will it encourage the rural economy and diversification, and support sustainable tourism?		
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it contribute to providing a range of employment opportunities, in accessible locations?	+	27.94 minutes from site to nearest employment area with 2000+ employees. Only 1 employment area with 2000+ employees that can be accessed in less than 30mins - 1.6km walk.
		Will it improve the level of investment in key community services and infrastructure, including broadband?	+	Minor Utilities Infrastructure improvements required, but constraints can be addressed. There is insufficient spare mains water capacity within the distribution zone to supply the number of proposed properties which could arise if all the SHLAA sites within the zone were to be developed. The sewerage network is close to capacity and will require mitigation.
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve access to education and training, and support provision of skilled employees to the economy?	+	Insufficient spare school capacity but potential for improvement to meet needs

Transport	Reduce the need to travel and promote more sustainable transport choices.	Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	0	Total score of 11.
		Sub-indicator: Distance to bus stop / rail station	+++	368m ACF from the centre of the site to the nearest bus stop.
		Sub-indicator: Frequency of Public Transport	-	Hourly Service
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	---	51 minutes from Whittlesford to Cambridge
		Sub-indicator: Distance for cycling to City Centre or Market Town	0	10.34km ACF from the centre of the site to Cambridge Market.
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	---	Insufficient capacity or access constraints that cannot be adequately mitigated. The proposed site does not appear to have a direct link to the adopted public highway.
		Will it make the transport network safer for and promote use of non-motorised modes?	0	No impact.

Site No. Site 211
Address Land at Pampisford Road / High Street, Great Abington
Location Great Abington
Category of site Group Village
Site area 3.64

Theme	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	0	No previously developed land.
		Will it use land efficiently?		
		Will it protect and enhance the best and most versatile agricultural land?	-	Minor loss of best and most versatile agricultural land (Grades 1 and 2) - small site but all Grade 2.
		Will it avoid the sterilisation of economic mineral reserves? Will it minimise the degradation/loss of soils due to new development?	0	Site not within an area designated in the Minerals and Waste LDF
	Minimise waste production and support the reuse and recycling of waste products	Will it encourage reduction in household waste, and increase waste recovery and recycling?		
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	0	Development unlikely to impact on air quality. Site lies in an area where air quality acceptable.
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	-	Development compatible with neighbouring uses. Environmental Health has concerns about noise from adjoining industrial uses Some minor to moderate additional road traffic noise generation impact on existing residential due to development related car movements but dependent on location of site entrance
		Will it minimise, and where possible address, land contamination?	0	Development not on land likely to be contaminated. Previous agricultural use can be mitigated.
		Will it protect and where possible enhance the quality of the water environment?	0	Development unlikely to affect water quality. The site within Groundwater Source Protection Zone 2 which does not rule out development but may influence land use or require pollution control measures. Assumptions for a neutral impact are that appropriate standards and pollution control measures will be achieved through the development process and will mitigate any impact on groundwater,
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiversity?	0	No impact on protected sites and species (or impacts could be mitigated).
	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	0	Assumptions for a neutral impact are that existing features that warrant retention can be retained or appropriate mitigation will be achieved through the development process.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process.

Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	---	Significant Negative Impact (Development conflicts with landscape character, with significant negative impacts incapable of mitigation) - would be a loss of the separation of the village from New House Farm and a loss of the rural setting and backdrop to this farmstead.
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	-	Minor Negative Impact (development conflicts with townscape character, minor negative impacts incapable of mitigation) - incompatible with linear street pattern
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	---	Significant Negative Impact on historic Assets (incapable of satisfactory mitigation) Major adverse harm to listed buildings due to loss of farmland settings and backdrop to former farmstead and due to loss of visual link between adjacent farmsteads. Archaeological potential will require further information but it is likely appropriate mitigation can be achieved through the development process.
	Create places, spaces and buildings that work well, wear well and look good	Will it lead to developments built to a high standard of design and good place making that reflects local character?		
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	0	Standard requirements for renewables would apply.
		Will it promote energy efficiency?		
		Will it minimise contributions to climate change through sustainable construction practices?		
	Reduce vulnerability to future climate change effects	Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	0	Flood Zone 1 and no drainage issues that cannot be appropriately addressed.
		Will it minimise the likely impacts of climate change on the development through appropriate design?		
Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?				
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?		
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?		

Inclusive Communities - Housing	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	0	Neutral impact (existing features retained or appropriate mitigation).
	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?		
		Will it provide for housing for the ageing population?		
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	No effect on pitch or plot provision.
Inclusive Communities - Redressing inequalities and involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	-	Group Village
		Sub-Indicator: Distance to centre	0	626m ACF to the village Post Office - location represents of central point in relation to other services and facilities.
		Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	0	No facilities lost, and no new facilities proposed directly as a result of the development.
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will improve relations between people from different backgrounds or social groups?		
		Will it redress inequalities?		
	Encourage and enable the active involvement of local people in community activities	Will it increase the ability of people to influence decisions, including 'hard to reach' groups?		
Will it encourage engagement with community activities?		0	No facilities lost, and no new facilities proposed directly as a result of the development.	

Economic Activity		Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	0	Development would have no effect on employment land or premises.
	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	Development would have no effect on vitality or viability of existing centres. The indicator is likely to apply particularly to sites which include retail, offices, or leisure uses.
		Will it encourage the rural economy and diversification, and support sustainable tourism?		
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it contribute to providing a range of employment opportunities, in accessible locations?	+	17.86 minutes from site to nearest employment area with 2000+ employees. 4 employment areas with 2000+ employees that can be accessed in less than 30mins - 1.6km walk.
		Will it improve the level of investment in key community services and infrastructure, including broadband?	+	Minor Utilities Infrastructure improvements required, but constraints can be addressed. There is insufficient spare mains water capacity within the distribution zone to supply the number of proposed properties which could arise if all the SHLAA sites within the zone were to be developed. The sewerage network is approaching capacity and will require mitigation.
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve access to education and training, and support provision of skilled employees to the economy?	-	School capacity not sufficient, but significant issues can be adequately addressed

Transport	Reduce the need to travel and promote more sustainable transport choices.	Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	+	Total score of 17.
		Sub-indicator: Distance to bus stop / rail station	+++	197m ACF from the centre of the site to the nearest bus stop.
		Sub-indicator: Frequency of Public Transport	0	30 Minute Service.
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	+	26 minutes from Great Abington to Cambridge.
		Sub-indicator: Distance for cycling to City Centre or Market Town	+	9.77km ACF from the centre of the site to Saffron Walden Market.
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	---	Insufficient capacity or access constraints that cannot be adequately mitigated. Highway Authority has concerns about accident record of the A1307 and therefore before the proposed scheme comes forward a detailed analysis of access points onto the A1307 and A11 will need to be completed.
		Will it make the transport network safer for and promote use of non-motorised modes?	0	No impact

Site No. Site 212
Address Land east of Hinton Way, Great Shelford
Location Great Shelford & Stapleford
Category of site Rural Centre
Site area 1.97

Theme	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	0	No previously developed land.
		Will it use land efficiently?		
		Will it protect and enhance the best and most versatile agricultural land?	-	Minor loss of best and most versatile agricultural land (Grades 1 and 2) - small site including Grade 2.
		Will it avoid the sterilisation of economic mineral reserves? Will it minimise the degradation/loss of soils due to new development?	0	Site not within an area designated in the Minerals and Waste LDF.
	Minimise waste production and support the reuse and recycling of waste products	Will it encourage reduction in household waste, and increase waste recovery and recycling?		
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	0	Development unlikely to impact on air quality. Site lies in an area where air quality acceptable.
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	0	Development compatible with neighbouring uses.
		Will it minimise, and where possible address, land contamination?	0	Development not on land likely to be contaminated.
		Will it protect and where possible enhance the quality of the water environment?	0	Development unlikely to effect water quality. Assumptions for a neutral impact are that appropriate standards and pollution control measures will be achieved through the development process, e.g. as part of Sustainable Drainage Systems (SuDS).
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiversity?	0	No impact on protected sites and species (or impacts could be mitigated).
	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	+/0	Minor positive impact as there are some opportunities for enhancement through the provision of treebelts and hedgerows.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process.

Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	-	Minor negative impact (development conflicts with landscape character, minor negative impacts incapable of mitigation) - development of this site would result in further encroachment of the built area into the transitional area of enclosed fields that provide a softer edge to the village.
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	-	Minor negative impact (development conflicts with townscape character, minor negative impacts incapable of mitigation) - development of this site would change the linear character of this area of village.
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	---	Significant negative impact on historic assets (incapable of satisfactory mitigation) - the site is part of the settings of listed buildings and the Great Shelford Conservation Area. Archaeological potential will require further information but it is likely appropriate mitigation can be achieved through the development process.
	Create places, spaces and buildings that work well, wear well and look good	Will it lead to developments built to a high standard of design and good place making that reflects local character?		
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	0	Standard requirements for renewables would apply.
		Will it promote energy efficiency?		
		Will it minimise contributions to climate change through sustainable construction practices?		
	Reduce vulnerability to future climate change effects	Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	0	Flood Zone 1 and no drainage issues that cannot be appropriately addressed.
		Will it minimise the likely impacts of climate change on the development through appropriate design?		
		Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?		
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?		
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?		

Inclusive Communities - Housing	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	+/0	Development would create minor opportunities for new public open space.
	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?		
		Will it provide for housing for the ageing population?		
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	No effect on pitch or plot provision.
Inclusive Communities - Redressing inequalities and involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	+	Rural Centre.
		Sub-Indicator: Distance to centre	-	902m ACF to Woollards Lane which is surrounded by a large number of services and facilities.
		Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	0	No facilities lost, and no new facilities proposed directly as a result of the development.
		Will improve relations between people from different backgrounds or social groups?		
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will it redress inequalities?		
		Will it increase the ability of people to influence decisions, including 'hard to reach' groups?		
Encourage and enable the active involvement of local people in community activities	Will it encourage engagement with community activities?	0	No facilities lost, and no new facilities proposed directly as a result of the development.	

Economic Activity		Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	0	Development would have no effect on employment land or premises.
	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	Development would have no effect on vitality or viability of existing centres. The indicator is likely to apply particularly to sites which include retail, offices, or leisure uses.
		Will it encourage the rural economy and diversification, and support sustainable tourism?		
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it contribute to providing a range of employment opportunities, in accessible locations?	+++	14.66 minutes from site to nearest employment area with 2000+ employees. 6 employment areas with 2000+ employees that can be accessed in less than 30mins - 1.6km walk.
		Will it improve the level of investment in key community services and infrastructure, including broadband?	+	Minor utilities infrastructure improvements required, but constraints can be addressed. There is insufficient spare mains water capacity within the distribution zone to supply the number of proposed properties which could arise if all the SHLAA sites within the zone were to be developed. The sewerage network is approaching capacity.
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve access to education and training, and support provision of skilled employees to the economy?	-	School capacity not sufficient, but significant issues can be adequately addressed.

Transport	Reduce the need to travel and promote more sustainable transport choices.	Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	+	Total score of 16-17.
		Sub-indicator: Distance to bus stop / rail station	+	126m ACF from the centre of the site to nearest bus stop (31 Service). 422m ACF from the centre of the site to train station.
		Sub-indicator: Frequency of Public Transport	0 / -	Bus has a less than hourly service. Train has an 30 minute to hourly service.
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	+++	Bus service takes 24 minutes from Great Shelford to Cambridge. Train service takes 5-11 minutes from Great Shelford to Cambridge.
		Sub-indicator: Distance for cycling to City Centre or Market Town	+	6.29km ACF from the centre of the site to Cambridge Market.
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	---	Significant negative effects incapable of mitigation. Access constraints - the proposed site does not have a direct link to the adopted public highway. The promoter has indicated that access will need to be secured from the adjoining landowner.
		Will it make the transport network safer for and promote use of non-motorised modes?	0	No impact.

Site No. Site 213
Address Land at east of Court Meadows House, Balsham Road, Fulbourn
Location Fulbourn
Category of site Rural Centre
Site area 13.84

Theme	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	0	No previously developed land.
		Will it use land efficiently?		
		Will it protect and enhance the best and most versatile agricultural land?	-/0	Minor loss of best and most versatile agricultural land (Grades 1 and 2) - Majority of site is Grade 2.
		Will it avoid the sterilisation of economic mineral reserves? Will it minimise the degradation/loss of soils due to new development?	0	Site within an area designated in the Minerals and Waste LDF but development would not have a negative impact.
	Minimise waste production and support the reuse and recycling of waste products	Will it encourage reduction in household waste, and increase waste recovery and recycling?		
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	0	Development unlikely to impact on air quality. Site lies in an area where air quality acceptable.
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	0	Development compatible with neighbouring uses.
		Will it minimise, and where possible address, land contamination?	0	Development not on land likely to be contaminated.
		Will it protect and where possible enhance the quality of the water environment?	0	Development unlikely to affect water quality. The site within Groundwater Source Protection Zone 3 which does not rule out development but may influence land use or require pollution control measures. Assumptions for a neutral impact are that appropriate standards and pollution control measures will be achieved through the development process and will mitigate any impact on groundwater.
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiversity?	0	No impact on protected sites and species (or impacts could be mitigated).
	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	0/-	Assumptions for a neutral impact are that existing features that warrant retention can be retained or appropriate mitigation will be achieved through the development process. Greatest impact likely to arise through the loss of open grassland which may be of value as foraging habitat for bats and badgers. Fulbourn Nature Reserve is relatively nearby.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process.

Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	---	Significant Negative Impact (Development conflicts with landscape character, with significant negative impacts incapable of mitigation) - the site is prominently located on the eastern edge of the village and is part of the rural landscape setting of Fulbourn.
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	-	Minor Negative Impact (development conflicts with townscape character, minor negative impacts incapable of mitigation) - incompatible with linear street pattern characteristic of Fulbourn.
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	---	Significant Negative Impact on historic Assets (incapable of satisfactory mitigation) - major adverse effect on the setting of the conservation area and village due to prominent position on approach. Also major effect on settings of listed buildings in Stonebridge Lane due to obstruction of foreground and rural backdrop to these properties. Archaeological potential will require further information but it is likely appropriate mitigation can be achieved through the development process.
	Create places, spaces and buildings that work well, wear well and look good	Will it lead to developments built to a high standard of design and good place making that reflects local character?		
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	0	Standard requirements for renewables would apply.
		Will it promote energy efficiency?		
		Will it minimise contributions to climate change through sustainable construction practices?		
	Reduce vulnerability to future climate change effects	Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	0	Flood Zone 1 and no drainage issues that cannot be appropriately addressed. To the east of the site there is a band of land within flood zone 3 – approximately a fifth of the area.
		Will it minimise the likely impacts of climate change on the development through appropriate design?		
		Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?		
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?		
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?		

Inclusive Communities - Housing	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	0	Neutral impact (existing features retained or appropriate mitigation). Assumption is standard requirements for open space would apply.
	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?		
		Will it provide for housing for the ageing population?		
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	No effect on pitch or plot provision.
Inclusive Communities - Redressing inequalities and involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	+	Rural Centre
		Sub-Indicator: Distance to centre	-	846m ACF from the centre of the site Fulbourn High Street -a cluster of services and facilities within the village.
		Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	+	New facilities or improved existing facilities are proposed of minor benefit. Call for Sites questionnaire states that scale of development proposed on the site would be able to deliver complimentary non-residential uses such a community facilities, open space and a limited amount of retail.
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will improve relations between people from different backgrounds or social groups?		
		Will it redress inequalities?		
		Will it increase the ability of people to influence decisions, including 'hard to reach' groups?		
Encourage and enable the active involvement of local people in community activities	Will it encourage engagement with community activities?	0	No facilities lost, and no new facilities proposed directly as a result of the development. Promoter does indicate that scale of development would enable delivery of non residential uses such as community facilities.	

Economic Activity		Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	0	Development would have no effect on employment land or premises.
	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	Development would have no effect on vitality or viability of existing centres. The indicator is likely to apply particularly to sites which include retail, offices, or leisure uses.
		Will it encourage the rural economy and diversification, and support sustainable tourism?		
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it contribute to providing a range of employment opportunities, in accessible locations?	+	29.77 minutes from site to nearest employment area with 2000+ employees. Only 1 employment area with 2000+ employees that can be accessed in less than 30mins - 1.6km walk.
		Will it improve the level of investment in key community services and infrastructure, including broadband?	-	Major utilities Infrastructure improvements required, but constraints can be addressed. The electricity, mains water, gas and sewerage systems will need reinforcement to increase capacity.
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve access to education and training, and support provision of skilled employees to the economy?	-	School capacity not sufficient, but significant issues can be adequately addressed

Transport	Reduce the need to travel and promote more sustainable transport choices.	Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	0	Total score of 12.
		Sub-indicator: Distance to bus stop / rail station	+	550m ACF from the centre of the site to the nearest bus stop (16 Service). 955m ACF from the centre of the site to the nearest bus stop (Citi 1).
		Sub-indicator: Frequency of Public Transport	---	16 service - less than hourly service. Citi 1 - 20 Minute Service.
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	+	16 service - 30 Minutes from Fulbourn to Haverhill Citi 1 - 50 Minutes from Fulbourn to Cambridge.
		Sub-indicator: Distance for cycling to City Centre or Market Town	+	8.29km ACF from the centre of the site to Cambridge Market.
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	0	No capacity constraints identified, safe access can be achieved.
		Will it make the transport network safer for and promote use of non-motorised modes?	+	The Highway Authority will require new development to provide or contribute to the provision of infrastructure to encourage more sustainable transport links both on and off site. Provision or contribution from this site would result in minor improvement to public transport, walking or cycling facilities.

Site No. Site 214
Address Land off Home End, Fulbourn
Location Fulbourn
Category of site Rural Centre
Site area 0.52

Theme	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	0	No previously developed land.
		Will it use land efficiently?		
		Will it protect and enhance the best and most versatile agricultural land?	0	Development would not affect best and most versatile agricultural land (Grades 1 and 2).
		Will it avoid the sterilisation of economic mineral reserves? Will it minimise the degradation/loss of soils due to new development?	0	Site not within an area designated in the Minerals and Waste LDF.
	Minimise waste production and support the reuse and recycling of waste products	Will it encourage reduction in household waste, and increase waste recovery and recycling?		
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	0	Development unlikely to impact on air quality. Site lies in an area where air quality acceptable.
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	-/--- ?	Development compatible with some neighbouring uses. Environmental Health concerned because the site will be immediately adjacent to an existing skateboard park, play equipment and general recreation ground and guide & scout club buildings. The site is also adjacent to Townley Memorial Hall, Home End and a Community Facility / Building (Fulbourn Sports & Social club) which hold entertainment type events such as music and theatre / plays. Concern at noise disturbance bringing residential use closer to these uses. Some minor to moderate additional road traffic noise generation impact on existing residential due to development related car movements but dependent on location of site entrance
		Will it minimise, and where possible address, land contamination?	0	Development not on land likely to be contaminated.
		Will it protect and where possible enhance the quality of the water environment?	0	Development unlikely to affect water quality. The site within Groundwater Source Protection Zone 2 which does not rule out development but may influence land use or require pollution control measures. Assumptions for a neutral impact are that appropriate standards and pollution control measures will be achieved through the development process and will mitigate any impact on groundwater,
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiversity?	0	No impact on protected sites and species (or impacts could be mitigated).
	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	0	Assumptions for a neutral impact are that existing features that warrant retention can be retained or appropriate mitigation will be achieved through the development process.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process.

Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	---	Significant Negative Impact (Development conflicts with landscape character, with significant negative impacts incapable of mitigation) - Development of this site would have a significant adverse effect on the landscape setting of Fulbourn because it would reduce the transitional area including the recreation ground on this edge of the village
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	-	Minor Negative Impact (development conflicts with townscape character, minor negative impacts incapable of mitigation) - incompatible with linear street pattern characteristic of Fulbourn.
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	---	Significant Negative Impact on historic Assets (incapable of satisfactory mitigation) - major effect on settings of listed buildings in Home End . Major adverse effect on Conservation Area due to loss of prominent and important open green space, playing fields and countryside views. Archaeological potential will require further information but it is likely appropriate mitigation can be achieved through the development process.
	Create places, spaces and buildings that work well, wear well and look good	Will it lead to developments built to a high standard of design and good place making that reflects local character?		
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	0	Standard requirements for renewables would apply.
		Will it promote energy efficiency?		
		Will it minimise contributions to climate change through sustainable construction practices?		
	Reduce vulnerability to future climate change effects	Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	0	Flood Zone 1 and no drainage issues that cannot be appropriately addressed.
		Will it minimise the likely impacts of climate change on the development through appropriate design?		
		Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?		
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?		
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?		

Inclusive Communities - Housing	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	0	Neutral impact (existing features retained or appropriate mitigation). Assumption is standard requirements for open space would apply.
	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?		
		Will it provide for housing for the ageing population?		
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	No effect on pitch or plot provision.
Inclusive Communities - Redressing inequalities and involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	+	Rural Centre
		Sub-Indicator: Distance to centre	+	444m ACF from the centre of the site Fulbourn High Street -a cluster of services and facilities within the village.
		Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	0	No facilities lost, and no new facilities proposed directly as a result of the development.
		Will improve relations between people from different backgrounds or social groups?		
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will it redress inequalities?		
		Will it increase the ability of people to influence decisions, including 'hard to reach' groups?		
	Encourage and enable the active involvement of local people in community activities	Will it encourage engagement with community activities?	0	No facilities lost, and no new facilities proposed directly as a result of the development.

Economic Activity		Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	0	Development would have no effect on employment land or premises.
	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	Development would have no effect on vitality or viability of existing centres. The indicator is likely to apply particularly to sites which include retail, offices, or leisure uses.
		Will it encourage the rural economy and diversification, and support sustainable tourism?		
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it contribute to providing a range of employment opportunities, in accessible locations?	+	25.65 minutes from site to nearest employment area with 2000+ employees. 2 employment areas with 2000+ employees that can be accessed in less than 30mins - 1.6km walk.
		Will it improve the level of investment in key community services and infrastructure, including broadband?	+	Minor Utilities Infrastructure improvements required, but constraints can be addressed. There is insufficient spare mains water capacity within the distribution zone to supply the number of proposed properties which could arise if all the SHLAA sites within the zone were to be developed. The WWTW is operating close to capacity and the sewerage network is at capacity and both will require mitigation.
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve access to education and training, and support provision of skilled employees to the economy?	-	School capacity not sufficient, but significant issues can be adequately addressed

Transport	Reduce the need to travel and promote more sustainable transport choices.	Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	0	Total score of 14.
		Sub-indicator: Distance to bus stop / rail station	+	197m ACF from the centre of the site to the nearest bus stop (16 Service). 402m ACF from the centre of the site to the nearest bus stop (Citi 1).
		Sub-indicator: Frequency of Public Transport	+	16 service - less than hourly service. Citi 1 - 20 Minute Service.
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	-	16 service - 30 Minutes from Fulbourn to Haverhill. Citi 1 - 50 Minutes from Fulbourn to Cambridge.
		Sub-indicator: Distance for cycling to City Centre or Market Town	+	7.72km ACF from the centre of the site to Cambridge Market.
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	0	No capacity constraints identified, safe access can be achieved.??? Highway Authority state no access to public road???
		Will it make the transport network safer for and promote use of non-motorised modes?	0	No impact.

Site No. Site 215
Address Land north of Glebe Road, Barrington
Location Barrington
Category of site Group Village
Site area 5.2

Theme	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	0	No previously developed land.
		Will it use land efficiently?		
		Will it protect and enhance the best and most versatile agricultural land?	0	Minor loss of best and most versatile agricultural land (Grades 1 and 2) - small site but all Grade 2 (5.2 ha.).
		Will it avoid the sterilisation of economic mineral reserves? Will it minimise the degradation/loss of soils due to new development?	0	Site not within an area designated in the Minerals and Waste LDF.
	Minimise waste production and support the reuse and recycling of waste products	Will it encourage reduction in household waste, and increase waste recovery and recycling?		
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	0	Development unlikely to impact on air quality. Site lies in an area where air quality acceptable.
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	-	Development compatible with neighbouring uses. Some minor to moderate additional road traffic noise generation impact on existing residential due to development related car movements but dependent on location of site entrance
		Will it minimise, and where possible address, land contamination?	+	Adjacent to industrial/commercial and may have contaminated land. Potential for minor benefits through remediation of minor contamination
		Will it protect and where possible enhance the quality of the water environment?	0	Assumptions for a neutral impact are that appropriate standards and pollution control measures will be achieved through the development process, e.g. as part of Sustainable Drainage Systems (Suds).
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiversity?	0	No impact on protected sites and species (or impacts could be mitigated).
	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	0	Assumptions for a neutral impact are that existing features that warrant retention can be retained or appropriate mitigation will be achieved through the development process.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process. Footpath to the south east.

Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	---	Significant Negative Impact (Development conflicts with landscape character, with significant negative impacts incapable of mitigation) - The site is situated in an area of gently rolling landscape and is very visible from the surrounding higher land. Development in this location will form a large area of backland development out of keeping with the predominantly linear character of Barrington, harmful to the rural character of the village.
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	---	Significant Negative Impact (Development conflicts with townscape character, with significant negative impacts incapable of mitigation) - The site is situated in an area of gently rolling landscape and is very visible from the surrounding higher land. Development in this location will form a large area of backland development out of keeping with the predominantly linear character of Barrington, harmful to the rural character of the village.
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	-	Minor Negative Impact on historic Assets (incapable of satisfactory mitigation) – site forms part of the setting of several Grade II Listed Buildings and the Conservation Area. Archaeological potential will require further information but the assumption for a neutral impact is that it is likely appropriate mitigation can be achieved through the development process.
	Create places, spaces and buildings that work well, wear well and look good	Will it lead to developments built to a high standard of design and good place making that reflects local character?		
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	0	Standard requirements for renewables would apply.
		Will it promote energy efficiency?		
		Will it minimise contributions to climate change through sustainable construction practices?		
	Reduce vulnerability to future climate change effects	Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	0	Flood Zone 1 and no drainage issues that cannot be appropriately addressed.
		Will it minimise the likely impacts of climate change on the development through appropriate design?		
Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?				
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?		
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?		

Inclusive Communities - Housing	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	0	Neutral impact (existing features retained or appropriate mitigation). Assumption is standard requirements for open space would apply.
	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?		
		Will it provide for housing for the ageing population?		
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	No effect on pitch or plot provision.
Inclusive Communities - Redressing Inequalities and involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	-	Group Village
		Sub-Indicator: Distance to centre	-	945m ACF to the Village Hall, central to the village and other services and facilities within the village.
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	0	No facilities lost, and no new facilities proposed directly as a result of the development.
		Will improve relations between people from different backgrounds or social groups?		
	Encourage and enable the active involvement of local people in community activities	Will it redress inequalities?		
		Will it increase the ability of people to influence decisions, including 'hard to reach' groups?		
	Will it encourage engagement with community activities?	0	No facilities lost, and no new facilities proposed directly as a result of the development.	

Economic Activity		Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	0	Development would have no effect on employment land or premises.
	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	Development would have no effect on vitality or viability of existing centres. The indicator is likely to apply particularly to sites which include retail, offices, or leisure uses.
		Will it encourage the rural economy and diversification, and support sustainable tourism?		
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it contribute to providing a range of employment opportunities, in accessible locations?	0	36.03 minutes from site to nearest employment area with 2000+ employees. No employment areas with 2000+ employees that can be accessed in less than 30mins - 1.6km walk.
		Will it improve the level of investment in key community services and infrastructure, including broadband?	+	Minor Utilities Infrastructure improvements required, but constraints can be addressed. There is insufficient spare mains water capacity within the distribution zone to supply the number of proposed properties which could arise if all the SHLAA sites within the zone were to be developed. The sewerage network is at capacity and both will require mitigation.
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve access to education and training, and support provision of skilled employees to the economy?	+	Insufficient spare school capacity but potential for improvement to meet needs. Insufficient primary and secondary school capacity,

Transport		Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	0	Total score of 14.
	Reduce the need to travel and promote more sustainable transport choices.	Sub-indicator: Distance to bus stop / rail station	+++	346m ACF from the centre of the site to the nearest bus stop.
		Sub-indicator: Frequency of Public Transport	---	Less than hourly service.
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	+	30 Minutes from Barrington to Cambridge.
		Sub-indicator: Distance for cycling to City Centre or Market Town	+	9.62km ACF from the centre of the site to Cambridge Market.
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	---	Insufficient capacity or access constraints that cannot be adequately mitigated. The Highway Authority has concerns in relationship to the provision of suitable inter vehicle visibility splay for this site.
		Will it make the transport network safer for and promote use of non-motorised modes?	0	No impact.

Site No. Site 216
Address Land east of Fox Road, Balsham
Location Balsham
Category of site Group Village
Site area 5.37

Theme	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	0	No previously developed land.
		Will it use land efficiently?		
		Will it protect and enhance the best and most versatile agricultural land?	-	Minor loss of best and most versatile agricultural land (Grades 1 and 2) - small site but all Grade 2.
		Will it avoid the sterilisation of economic mineral reserves? Will it minimise the degradation/loss of soils due to new development?	0	Site not within an area designated in the Minerals and Waste LDF.
	Minimise waste production and support the reuse and recycling of waste products	Will it encourage reduction in household waste, and increase waste recovery and recycling?		
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	0	Development unlikely to impact on air quality. Site lies in an area where air quality acceptable.
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	-	Development compatible with neighbouring uses. Some minor to moderate additional road traffic noise generation impact on existing residential due to development related car movements but dependent on location of site entrance
		Will it minimise, and where possible address, land contamination?	0	Development not on land likely to be contaminated
		Will it protect and where possible enhance the quality of the water environment?	0	Development unlikely to affect water quality. The site within Groundwater Source Protection Zone 3 which does not rule out development but may influence land use or require pollution control measures. Assumptions for a neutral impact are that appropriate standards and pollution control measures will be achieved through the development process and will mitigate any impact on groundwater,
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiversity?	0	No impact on protected sites and species (or impacts could be mitigated).
	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	0	Assumptions for a neutral impact are that existing features that warrant retention can be retained or appropriate mitigation will be achieved through the development process.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process.

Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	---	Significant Negative Impact (Development conflicts with landscape character, with significant negative impacts incapable of mitigation) - it would result in the loss of an open area with a distinct rural character.
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	-	Minor Negative Impact (development conflicts with townscape character, minor negative impacts incapable of mitigation) -
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	---	Significant Negative Impact on historic Assets (incapable of satisfactory mitigation) - Adverse impact on setting of the adjacent Grade II Listed Building- Balsham Place and setting of listed buildings along Fox Rd and High Street, which it would not be possible to mitigate. Archaeological potential will require further information but it is likely appropriate mitigation can be achieved through the development process
	Create places, spaces and buildings that work well, wear well and look good	Will it lead to developments built to a high standard of design and good place making that reflects local character?		
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	0	Standard requirements for renewables would apply.
		Will it promote energy efficiency?		
		Will it minimise contributions to climate change through sustainable construction practices?		
	Reduce vulnerability to future climate change effects	Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	0	Flood Zone 1 and no drainage issues that cannot be appropriately addressed.
		Will it minimise the likely impacts of climate change on the development through appropriate design?		
		Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?		
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?		
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?		

Inclusive Communities - Housing	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	0	Neutral impact (existing features retained or appropriate mitigation).
	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?		
		Will it provide for housing for the ageing population?		
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	No effect on pitch or plot provision.
Inclusive Communities - Redressing inequalities and involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	-	Group Village
		Sub-Indicator: Distance to centre	0	653m ACF to the Black Bull pub, which is central to the village, surrounded by other services and facilities.
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	0	No facilities lost, and no new facilities proposed directly as a result of the development.
		Will improve relations between people from different backgrounds or social groups?		
	Encourage and enable the active involvement of local people in community activities	Will it redress inequalities?		
		Will it increase the ability of people to influence decisions, including 'hard to reach' groups?		
		Will it encourage engagement with community activities?	0	No facilities lost, and no new facilities proposed directly as a result of the development.

Economic Activity		Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	0	Development would have no effect on employment land or premises.
	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	Development would have no effect on vitality or viability of existing centres. The indicator is likely to apply particularly to sites which include retail, offices, or leisure uses.
		Will it encourage the rural economy and diversification, and support sustainable tourism?		
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it contribute to providing a range of employment opportunities, in accessible locations?	0	35.56 minutes from site to nearest employment area with 2000+ employees. No employment areas with 2000+ employees can be accessed in less than 30mins - 1.6km walk.
		Will it improve the level of investment in key community services and infrastructure, including broadband?	+	Minor Utilities Infrastructure improvements required, but constraints can be addressed. There is insufficient spare mains water capacity within the distribution zone to supply the number of proposed properties which could arise if all the SHLAA sites within the zone were to be developed. The sewerage network is approaching capacity and will require mitigation.
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve access to education and training, and support provision of skilled employees to the economy?	-	School capacity not sufficient, but significant issues can be adequately addressed

Transport		Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	0	Total score of 13.
	Reduce the need to travel and promote more sustainable transport choices.	Sub-indicator: Distance to bus stop / rail station	+++	181m ACF from the centre of the site to the nearest bus stop.
		Sub-indicator: Frequency of Public Transport	---	Less than hourly service.
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	+	20 Minutes from Balsham to Haverhill
		Sub-indicator: Distance for cycling to City Centre or Market Town	0	10.52km ACF from the centre of the site to Haverhill Market.
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	0	No capacity constraints identified, safe access can be achieved.
		Will it make the transport network safer for and promote use of non-motorised modes?	0	No impact.

Site No. Site 217
Address Land adj to 35 Cootes Lane, Fen Drayton
Location Fen Drayton
Category of site Group Village
Site area 0.45

Theme	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	0	No previously developed land.
		Will it use land efficiently?		
		Will it protect and enhance the best and most versatile agricultural land?	-	Minor loss of best and most versatile agricultural land (Grades 1 and 2) - small site but all Grade 1.
		Will it avoid the sterilisation of economic mineral reserves? Will it minimise the degradation/loss of soils due to new development?	0	The site is within an area designated in the Minerals and Waste LDF but development would not have a negative impact.
	Minimise waste production and support the reuse and recycling of waste products	Will it encourage reduction in household waste, and increase waste recovery and recycling?		
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	0	Development unlikely to impact on air quality. Site lies in an area where air quality acceptable.
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	0	Development compatible with neighbouring uses. Some possible noise from the A14 which should be possible to mitigate.
		Will it minimise, and where possible address, land contamination?	0	Development not on land likely to be contaminated.
		Will it protect and where possible enhance the quality of the water environment?	0	Development unlikely to effect water quality. Assumptions for a neutral impact are that appropriate standards and pollution control measures will be achieved through the development process, e.g. as part of Sustainable Drainage Systems (SuDS).
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiversity?	0	No impact on protected sites and species (or impacts could be mitigated).
	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	0	Assumptions for a neutral impact are that existing features that warrant retention can be retained or appropriate mitigation will be achieved through the development process.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process.

Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	-	Minor negative impact (development conflicts with landscape character, minor negative impacts incapable of mitigation) - development of the site would result in the encroachment of the built area into the countryside and small-scale landscape created by the former LSA estate.
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	-	Minor negative impact (development conflicts with townscape character, minor negative impacts incapable of mitigation) - development of this site would change the agricultural character of this area of the village.
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Archaeological potential will require further information but the assumption for a neutral impact is that it is likely appropriate mitigation can be achieved through the development process.
	Create places, spaces and buildings that work well, wear well and look good	Will it lead to developments built to a high standard of design and good place making that reflects local character?		
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	0	Standard requirements for renewables would apply.
		Will it promote energy efficiency?		
		Will it minimise contributions to climate change through sustainable construction practices?		
	Reduce vulnerability to future climate change effects	Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	0	Flood Zone 1 and no drainage issues that cannot be appropriately addressed.
		Will it minimise the likely impacts of climate change on the development through appropriate design?		
Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?				
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?		
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?		

Inclusive Communities - Housing	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	0	Neutral impact (existing features retained or appropriate mitigation).
	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?		
		Will it provide for housing for the ageing population?		
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	No effect on pitch or plot provision.
Inclusive Communities - Redressing inequalities and involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	-	Group Village
		Sub-Indicator: Distance to centre	+++	127m ACF to a point on Cootes Lane which is central to the surrounding services and facilities within the village.
		Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	0	No facilities lost, and no new facilities proposed directly as a result of the development.
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will improve relations between people from different backgrounds or social groups?		
		Will it redress inequalities?		
		Will it increase the ability of people to influence decisions, including 'hard to reach' groups?		
	Encourage and enable the active involvement of local people in community activities	Will it encourage engagement with community activities?	0	No facilities lost, and no new facilities proposed directly as a result of the development.

Economic Activity		Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	0	Development would have no effect on employment land or premises.
	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	Development would have no effect on vitality or viability of existing centres. The indicator is likely to apply particularly to sites which include retail, offices, or leisure uses.
		Will it encourage the rural economy and diversification, and support sustainable tourism?		
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it contribute to providing a range of employment opportunities, in accessible locations?	+	20.57 minutes from site to nearest employment area with 2000+ employees. 2 employment areas with 2000+ employees that can be accessed in less than 30mins - 1.6km walk.
		Will it improve the level of investment in key community services and infrastructure, including broadband?	+	Minor utilities infrastructure improvements required, but constraints can be addressed. There is insufficient spare capacity within the distribution zone to supply the total number of proposed properties which could arise if all the SHLAA sites with the zone were to be developed. The sewerage network is approaching capacity.
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve access to education and training, and support provision of skilled employees to the economy?	-	School capacity not sufficient, but significant issues can be adequately addressed.

Transport	Reduce the need to travel and promote more sustainable transport choices.	Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	+++	Total score of 20. One kilometre from Guided Bus stop but on largely unsurfaced and unlit path so could impact on the use of this form of public transport.
		Sub-indicator: Distance to bus stop / rail station	+++	127m ACF from the centre of the site to the nearest bus stop.
		Sub-indicator: Frequency of Public Transport	-	Hourly service.
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	+++	15 Minutes from Fen Drayton to St. Ives.
		Sub-indicator: Distance for cycling to City Centre or Market Town	+++	3.55km ACF from the centre of the site to St. Ives Market.
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	0/-	Minor negative effects incapable of mitigation. Capacity - given the capacity constraints on the A14, it would be difficult to see more than a quarter of the identified housing development being deliverable.
		Will it make the transport network safer for and promote use of non-motorised modes?	0	No impact.

Site No. Site 218
Address Land at Triangle Farm, Fowlmere
Location Fowlmere
Category of site Group Village
Site area 1.03

Theme	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	0	No previously developed land.
		Will it use land efficiently?		
		Will it protect and enhance the best and most versatile agricultural land?	-	Minor loss of best and most versatile agricultural land (Grades 1 and 2) - small site but all Grade 2.
		Will it avoid the sterilisation of economic mineral reserves? Will it minimise the degradation/loss of soils due to new development?	0	Site not within an area designated in the Minerals and Waste LDF.
	Minimise waste production and support the reuse and recycling of waste products	Will it encourage reduction in household waste, and increase waste recovery and recycling?		
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	0	Development unlikely to impact on air quality. Site lies in an area where air quality acceptable.
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	-	Development compatible with neighbouring uses. Some minor to moderate additional road traffic noise generation impact on existing residential due to development related car movements but dependent on location of site entrance
		Will it minimise, and where possible address, land contamination?	0	Development not on land likely to be contaminated.
		Will it protect and where possible enhance the quality of the water environment?	0	Assumptions for a neutral impact are that appropriate standards and pollution control measures will be achieved through the development process, e.g. as part of Sustainable Drainage Systems (Suds).
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiversity?	0	No impact on protected sites and species (or impacts could be mitigated).
	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	0	Assumptions for a neutral impact are that existing features that warrant retention can be retained or appropriate mitigation will be achieved through the development process.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process.

Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	---	Significant Negative Impact (Development conflicts with landscape character, with significant negative impacts incapable of mitigation) -significant adverse impact on the landscape setting of the village because it is an enclosed field forming part of the transition to open countryside between Fowlmere and Thriplow.
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	0	Neutral impact (generally compatible, or capable of being made compatible with local townscape character). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process.
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	-	Minor Negative Impact on historic Assets (incapable of satisfactory mitigation) – site forms an important part of the setting of Grade II Listed building.
	Create places, spaces and buildings that work well, wear well and look good	Will it lead to developments built to a high standard of design and good place making that reflects local character?		
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	0	Standard requirements for renewables would apply.
		Will it promote energy efficiency?		
		Will it minimise contributions to climate change through sustainable construction practices?		
	Reduce vulnerability to future climate change effects	Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	0	Flood Zone 1 and no drainage issues that cannot be appropriately addressed.
		Will it minimise the likely impacts of climate change on the development through appropriate design?		
		Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?		
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?		
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?		

Inclusive Communities - Housing	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	0	Neutral impact (existing features retained or appropriate mitigation).
	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?		
		Will it provide for housing for the ageing population?		
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	No effect on pitch or plot provision.
Inclusive Communities - Redressing inequalities and involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	-	Group Village
		Sub-Indicator: Distance to centre	+	576m ACF to The Chequers Inn Pub - location chosen as representation of central point of services and facilities.
		Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	0	No facilities lost, and no new facilities proposed directly as a result of the development.
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will improve relations between people from different backgrounds or social groups?		
		Will it redress inequalities?		
		Will it increase the ability of people to influence decisions, including 'hard to reach' groups?		
	Encourage and enable the active involvement of local people in community activities	Will it encourage engagement with community activities?	0	No facilities lost, and no new facilities proposed directly as a result of the development.

Economic Activity		Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	0	Development would have no effect on employment land or premises
	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	Development would have no effect on vitality or viability of existing centres. The indicator is likely to apply particularly to sites which include retail, offices, or leisure uses.
		Will it encourage the rural economy and diversification, and support sustainable tourism?		
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it contribute to providing a range of employment opportunities, in accessible locations?	0	40.39 minutes from site to nearest employment area with 2000+ employees. No employment areas with 2000+ employees that can be accessed in less than 30mins - 1.6km walk.
		Will it improve the level of investment in key community services and infrastructure, including broadband?	+	Minor Utilities Infrastructure improvements required, but constraints can be addressed. There is insufficient spare mains water capacity within the distribution zone to supply the number of proposed properties which could arise if all the SHLAA sites within the zone were to be developed. The sewerage network is at capacity and will require mitigation.
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve access to education and training, and support provision of skilled employees to the economy?	-	School capacity not sufficient, but significant issues can be adequately addressed

Transport		Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	0	Total score of 12.
	Reduce the need to travel and promote more sustainable transport choices.	Sub-indicator: Distance to bus stop / rail station	+++	170m ACF from the centre of the site to the nearest bus stop.
		Sub-indicator: Frequency of Public Transport	---	Less than hourly service.
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	-	45-55 Minutes from Fowlmere to Cambridge.
		Sub-indicator: Distance for cycling to City Centre or Market Town	+	8.91km ACF from the centre of the site to Royston Market.
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	0	No capacity constraints identified, safe access can be achieved.
		Will it make the transport network safer for and promote use of non-motorised modes?	0	No impact.

Site No. Site 219
Address Land north of Elbourn Way, Bassingbourn
Location Bassingbourn
Category of site Group Village
Site area 5.31

Theme	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	0	No previously developed land.
		Will it use land efficiently?		
		Will it protect and enhance the best and most versatile agricultural land?	-	Minor loss of best and most versatile agricultural land (Grades 1 and 2) - small site but all Grade 2.
		Will it avoid the sterilisation of economic mineral reserves? Will it minimise the degradation/loss of soils due to new development?	0	Site not within an area designated in the Minerals and Waste LDF.
	Minimise waste production and support the reuse and recycling of waste products	Will it encourage reduction in household waste, and increase waste recovery and recycling?		
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	0	Development unlikely to impact on air quality. Site lies in an area where air quality acceptable.
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	0/-	Development compatible with neighbouring uses. Some minor to moderate additional road traffic noise generation on existing residential due to development related car movements but dependent on location of site entrance.
		Will it minimise, and where possible address, land contamination?	0/+	The site would require investigation due to it being military land. Potential for benefits through remediation of any contamination.
		Will it protect and where possible enhance the quality of the water environment?	0	Development unlikely to effect water quality. Assumptions for a neutral impact are that appropriate standards and pollution control measures will be achieved through the development process, e.g. as part of Sustainable Drainage Systems (SuDS).
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiversity?	0	No impact on protected sites and species (or impacts could be mitigated).
	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	0	Assumptions for a neutral impact are that existing features that warrant retention can be retained or appropriate mitigation will be achieved through the development process.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process.

Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	-/---	Minor negative impact (development conflicts with landscape character, minor negative impacts incapable of mitigation) - development of the site would result in the encroachment of built development into the enclosed fields that form a soft edge to the village and provide a rural setting for the listed buildings and conservation area, and would also change the rural character of this wooded and enclosed area of the village.
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	-	Minor negative impact (development conflicts with townscape character, minor negative impacts incapable of mitigation) - development of this site would be contrary to the pattern of linear development predominant in the village, especially the historic core.
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	---	Significant negative impact on historic assets (incapable of satisfactory mitigation) - development of the site is likely to have a significant adverse impact on the settings of the listed buildings and the Conservation Area, and the earthwork remnants of a moat.
	Create places, spaces and buildings that work well, wear well and look good	Will it lead to developments built to a high standard of design and good place making that reflects local character?		
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	0	Standard requirements for renewables would apply.
		Will it promote energy efficiency?		
	Reduce vulnerability to future climate change effects	Will it minimise contributions to climate change through sustainable construction practices?		
		Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	0/-	The majority of the site is Flood Zone 1. A very small area adjacent to the drain on the western edge of the site is in Flood Zones 2 and 3.
		Will it minimise the likely impacts of climate change on the development through appropriate design?		
	Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?			
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?		
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?		

Inclusive Communities - Housing	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	+/0	Development would create minor opportunities for new public open space.
	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?		
		Will it provide for housing for the ageing population?		
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	No effect on pitch or plot provision.
Inclusive Communities - Redressing inequalities and involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	-	Group Village
		Sub-Indicator: Distance to centre	+++	376m ACF to the village pharmacy - location chosen as representation of central point of a cluster services and facilities.
		Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	0	No facilities lost, and no new facilities proposed directly as a result of the development.
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will improve relations between people from different backgrounds or social groups?		
		Will it redress inequalities?		
		Will it increase the ability of people to influence decisions, including 'hard to reach' groups?		
Encourage and enable the active involvement of local people in community activities	Will it encourage engagement with community activities?	0	No facilities lost, and no new facilities proposed directly as a result of the development.	

Economic Activity		Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	0	Development would have no effect on employment land or premises.
	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	Development would have no effect on vitality or viability of existing centres. The indicator is likely to apply particularly to sites which include retail, offices, or leisure uses.
		Will it encourage the rural economy and diversification, and support sustainable tourism?		
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it contribute to providing a range of employment opportunities, in accessible locations?	+	22.21 minutes from site to nearest employment area with 2000+ employees. 2 employment areas with 2000+ employees that can be accessed in less than 30mins - 1.6km walk.
		Will it improve the level of investment in key community services and infrastructure, including broadband?	+	Minor utilities infrastructure improvements required, but constraints can be addressed. There is insufficient spare capacity within the distribution zone to supply the total number of proposed properties which could arise if all the SHLAA sites with the zone were to be developed. The sewerage network is approaching capacity.
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve access to education and training, and support provision of skilled employees to the economy?	-	School capacity not sufficient, but significant issues can be adequately addressed.

Transport	Reduce the need to travel and promote more sustainable transport choices.	Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	+	Total score of 18.
		Sub-indicator: Distance to bus stop / rail station	+++	297m ACF from the centre of the site to nearest bus stop.
		Sub-indicator: Frequency of Public Transport	---	Less than hourly service.
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	+++	19 minutes from Bassingbourn to Royston.
		Sub-indicator: Distance for cycling to City Centre or Market Town	+++	4.48km ACF from the centre of the site to St. Ives Market.
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	0	No capacity constraints identified, safe access can be achieved.
		Will it make the transport network safer for and promote use of non-motorised modes?	0	No impact.

Site No. Site 220
Address Land south of Poplar Farm Close & north of Brook Road, Bassingbourn
Location Bassingbourn
Category of site Group Village
Site area 0.51

Theme	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	0	No previously developed land.
		Will it use land efficiently?		
		Will it protect and enhance the best and most versatile agricultural land?	-	Minor loss of best and most versatile agricultural land (Grades 1 and 2) - small site but all Grade 2.
		Will it avoid the sterilisation of economic mineral reserves? Will it minimise the degradation/loss of soils due to new development?	0	Site not within an area designated in the Minerals and Waste LDF.
	Minimise waste production and support the reuse and recycling of waste products	Will it encourage reduction in household waste, and increase waste recovery and recycling?		
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	0	Development unlikely to impact on air quality. Site lies in an area where air quality acceptable.
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	0	Development compatible with neighbouring uses. Noise from Brook Road but can be mitigated by design and layout.
		Will it minimise, and where possible address, land contamination?	0/+	The site would require investigation due to its agricultural use. Potential for benefits through remediation of any contamination.
		Will it protect and where possible enhance the quality of the water environment?	0	Development unlikely to effect water quality. Assumptions for a neutral impact are that appropriate standards and pollution control measures will be achieved through the development process, e.g. as part of Sustainable Drainage Systems (SuDS).
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiversity?	0	No impact on protected sites and species (or impacts could be mitigated).
	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	0	Assumptions for a neutral impact are that existing features that warrant retention can be retained or appropriate mitigation will be achieved through the development process.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process.

Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	-	Minor negative impact (development conflicts with landscape character, minor negative impacts incapable of mitigation) - development of the site would result in the loss of mature trees and enclosed areas of grassland along the western edge of the village.
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	-/---	Minor negative impact (development conflicts with townscape character, minor negative impacts incapable of mitigation) - development of this site would change the townscape of the historic core which contains a number of buildings of interest and the site is part of an Important Countryside Frontage.
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	-	Minor negative impact on historic assets (incapable of satisfactory mitigation) – the site forms part of the settings of a number of listed buildings and the Conservation Area. Archaeological potential will require further information but the assumption for a neutral impact is that it is likely appropriate mitigation can be achieved through the development process.
	Create places, spaces and buildings that work well, wear well and look good	Will it lead to developments built to a high standard of design and good place making that reflects local character?		
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	0	Standard requirements for renewables would apply.
		Will it promote energy efficiency?		
		Will it minimise contributions to climate change through sustainable construction practices?		
	Reduce vulnerability to future climate change effects	Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	0	Flood Zone 1 and no drainage issues that cannot be appropriately addressed.
		Will it minimise the likely impacts of climate change on the development through appropriate design?		
		Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?		
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?		
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?		

Inclusive Communities - Housing	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	0	Neutral impact (existing features retained or appropriate mitigation).
	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?		
		Will it provide for housing for the ageing population?		
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	No effect on pitch or plot provision.
Inclusive Communities - Redressing inequalities and involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	-	Group Village
		Sub-Indicator: Distance to centre	+++	256m ACF to the village pharmacy - location chosen as representation of central point of a cluster services and facilities.
		Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	0	No facilities lost, and no new facilities proposed directly as a result of the development.
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will improve relations between people from different backgrounds or social groups?		
		Will it redress inequalities?		
	Encourage and enable the active involvement of local people in community activities	Will it increase the ability of people to influence decisions, including 'hard to reach' groups?		
Will it encourage engagement with community activities?		0	No facilities lost, and no new facilities proposed directly as a result of the development.	

Economic Activity		Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	0	Development would have no effect on employment land or premises.
	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	Development would have no effect on vitality or viability of existing centres. The indicator is likely to apply particularly to sites which include retail, offices, or leisure uses.
		Will it encourage the rural economy and diversification, and support sustainable tourism?		
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it contribute to providing a range of employment opportunities, in accessible locations?	+	20.48 minutes from site to nearest employment area with 2000+ employees. 2 employment areas with 2000+ employees that can be accessed in less than 30mins - 1.6km walk.
		Will it improve the level of investment in key community services and infrastructure, including broadband?	+	Minor utilities infrastructure improvements required, but constraints can be addressed. There is insufficient spare capacity within the distribution zone to supply the total number of proposed properties which could arise if all the SHLAA sites with the zone were to be developed. The sewerage network is approaching capacity.
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve access to education and training, and support provision of skilled employees to the economy?	-	School capacity not sufficient, but significant issues can be adequately addressed.

Transport	Reduce the need to travel and promote more sustainable transport choices.	Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	+	Total score of 18.
		Sub-indicator: Distance to bus stop / rail station	+++	155m ACF from the centre of the site to nearest bus stop.
		Sub-indicator: Frequency of Public Transport	---	Less than hourly service.
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	+++	19 minutes from Bassingbourn to Royston.
		Sub-indicator: Distance for cycling to City Centre or Market Town	+++	4.36km ACF from the centre of the site to St. Ives Market.
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	0	No capacity constraints identified, safe access can be achieved.
		Will it make the transport network safer for and promote use of non-motorised modes?	0	No impact.

Site No. Site 221
Address Land fronting Trap Road, Guilden Morden
Location Guilden Morden
Category of site Group Village
Site area 2.1

Theme	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	0	No previously developed land.
		Will it use land efficiently?		
		Will it protect and enhance the best and most versatile agricultural land?	-	Minor loss of best and most versatile agricultural land (Grades 1 and 2) - small site but all Grade 2.
		Will it avoid the sterilisation of economic mineral reserves? Will it minimise the degradation/loss of soils due to new development?	0	Site not within an area designated in the Minerals and Waste LDF
	Minimise waste production and support the reuse and recycling of waste products	Will it encourage reduction in household waste, and increase waste recovery and recycling?		
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	0	Development unlikely to impact on air quality. Site lies in an area where air quality acceptable.
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	-	Development compatible with neighbouring uses. Some minor to moderate additional road traffic noise generation impact on existing residential due to development related car movements but dependent on location of site entrance
		Will it minimise, and where possible address, land contamination?	0	Development not on land likely to be contaminated. Farm buildings on site so may need to be assessed.
		Will it protect and where possible enhance the quality of the water environment?	0	Development unlikely to affect water quality. Assumptions for a neutral impact are that appropriate standards and pollution control measures will be achieved through the development process, e.g. as part of Sustainable Drainage Systems (Suds).
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiversity?	0	No impact on protected sites and species (or impacts could be mitigated).
	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	0	Assumptions for a neutral impact are that existing features that warrant retention can be retained or appropriate mitigation will be achieved through the development process.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process.

Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	---	Significant Negative Impact (Development conflicts with landscape character, with significant negative impacts incapable of mitigation) - Part of the rural surroundings of the village and not associated with the built development. Development of this site would extend the eastern boundary of the village into open countryside
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	-	Minor Negative Impact (development conflicts with townscape character, minor negative impacts incapable of mitigation) - incompatible with linear nature of village.
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	---	Significant Negative Impact on historic Assets (incapable of satisfactory mitigation) – site forms an important part of the setting of Grade II* Morden Hall and impact on grade I St Marys church to north of site. Archaeological potential will require further information but the assumption for a neutral impact is that it is likely appropriate mitigation can be achieved through the development process.
	Create places, spaces and buildings that work well, wear well and look good	Will it lead to developments built to a high standard of design and good place making that reflects local character?		
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	0	Standard requirements for renewables would apply.
		Will it promote energy efficiency?		
		Will it minimise contributions to climate change through sustainable construction practices?		
	Reduce vulnerability to future climate change effects	Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	0	Flood Zone 1 and no drainage issues that cannot be appropriately addressed.
		Will it minimise the likely impacts of climate change on the development through appropriate design?		
		Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?		
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?		
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?		

Inclusive Communities - Housing	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	0	Neutral impact (existing features retained or appropriate mitigation).
	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?		
		Will it provide for housing for the ageing population?		
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	No effect on pitch or plot provision.
Inclusive Communities - Redressing inequalities and involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	-	Group Village
		Sub-Indicator: Distance to centre	+++	210m ACF from the centre of the site to th King Edward VII pub central in relation to services and facilities within the village.
		Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	0	No facilities lost, and no new facilities proposed directly as a result of the development.
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will improve relations between people from different backgrounds or social groups?		
		Will it redress inequalities?		
		Will it increase the ability of people to influence decisions, including 'hard to reach' groups?		
	Encourage and enable the active involvement of local people in community activities	Will it encourage engagement with community activities?	0	No facilities lost, and no new facilities proposed directly as a result of the development.

Economic Activity		Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	0	Development would have no effect on employment land or premises.
	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	Development would have no effect on vitality or viability of existing centres. The indicator is likely to apply particularly to sites which include retail, offices, or leisure uses.
		Will it encourage the rural economy and diversification, and support sustainable tourism?		
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it contribute to providing a range of employment opportunities, in accessible locations?	0	33.35 minutes from site to nearest employment area with 2000+ employees. No employment areas with 2000+ employees that can be accessed in less than 30mins - 1.6km walk.
		Will it improve the level of investment in key community services and infrastructure, including broadband?	+	Minor Utilities Infrastructure improvements required, but constraints can be addressed. There is insufficient spare mains water capacity within the distribution zone to supply the number of proposed properties which could arise if all the SHLAA sites within the zone were to be developed. The sewerage network is approaching capacity and will require mitigation.
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve access to education and training, and support provision of skilled employees to the economy?	-	School capacity not sufficient, but significant issues can be adequately addressed

Transport		Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	0	Total score of 14.
	Reduce the need to travel and promote more sustainable transport choices.	Sub-indicator: Distance to bus stop / rail station	+++	233m ACF from the centre of the site to the nearest bus stop
		Sub-indicator: Frequency of Public Transport	---	Less than hourly service.
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	+	29 minutes from Guilden Morden to Cambridge.
		Sub-indicator: Distance for cycling to City Centre or Market Town	+	8.29km ACF from the centre of the site to Royston Market.
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	0	No capacity constraints identified, safe access can be achieved.
		Will it make the transport network safer for and promote use of non-motorised modes?	0	No impact

Site No. Site 222
Address Land north of 6-14 Comberton Road, Barton
Location Barton
Category of site Group Village
Site area 2.6

Theme	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	0	No previously developed land.
		Will it use land efficiently?		
		Will it protect and enhance the best and most versatile agricultural land?	-	Minor loss of best and most versatile agricultural land (Grades 1 and 2) - small site but all Grade 2.
	Minimise waste production and support the reuse and recycling of waste products	Will it avoid the sterilisation of economic mineral reserves? Will it minimise the degradation/loss of soils due to new development?	0	Site not within an area designated in the Minerals and Waste LDF
Will it encourage reduction in household waste, and increase waste recovery and recycling?				
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	0	Development unlikely to impact on air quality. Site lies in an area where air quality acceptable.
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	-	Development compatible with neighbouring uses. Some minor to moderate additional road traffic noise generation impact on existing residential due to development related car movements but dependent on location of site entrance
	Will it protect and where possible enhance the quality of the water environment?	Will it minimise, and where possible address, land contamination?	0	Development not on land likely to be contaminated.
		Will it protect and where possible enhance the quality of the water environment?	0	Development unlikely to affect water quality. Assumptions for a neutral impact are that appropriate standards and pollution control measures will be achieved through the development process, e.g. as part of Sustainable Drainage Systems (Suds).
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiversity?	0	No impact on protected sites and species (or impacts could be mitigated).
	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	0	Assumptions for a neutral impact are that existing features that warrant retention can be retained or appropriate mitigation will be achieved through the development process.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process.

Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	---	Significant Negative Impact (Development conflicts with landscape character, with significant negative impacts incapable of mitigation) - Part of the rural surroundings of the village. This enclosed field marks the transition to a network of larger more open fields that extends from the northern edge of Barton. Development would impact on setting of village.
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	-	Minor Negative Impact (development conflicts with townscape character, minor negative impacts incapable of mitigation) - site forms part of setting of listed buildings including Clare College Farm.
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	---	Significant Negative Impact on historic Assets (incapable of satisfactory mitigation) – site forms an important part of the setting of a number of listed building including Grade II listed Clare College Farmhouse. Adverse impact on Conservation Area which follows boundary of site. Archaeological potential will require further information but the assumption for a neutral impact is that it is likely appropriate mitigation can be achieved through the development process.
	Create places, spaces and buildings that work well, wear well and look good	Will it lead to developments built to a high standard of design and good place making that reflects local character?		
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	0	Standard requirements for renewables would apply.
		Will it promote energy efficiency?		
		Will it minimise contributions to climate change through sustainable construction practices?		
	Reduce vulnerability to future climate change effects	Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	0	Flood Zone 1 and no drainage issues that cannot be appropriately addressed.
		Will it minimise the likely impacts of climate change on the development through appropriate design?		
		Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?		
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?		
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?		

Inclusive Communities - Housing	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	0	Neutral impact (existing features retained or appropriate mitigation).
	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?		
		Will it provide for housing for the ageing population?		
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	No effect on pitch or plot provision.
Inclusive Communities - Redressing inequalities and involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	-	Group Village
		Sub-Indicator: Distance to centre	+++	257m ACF from the centre to Barton Post Office with a cluster of services and facilities within the village.
		Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	0	No facilities lost, and no new facilities proposed directly as a result of the development.
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will improve relations between people from different backgrounds or social groups?		
		Will it redress inequalities?		
		Will it increase the ability of people to influence decisions, including 'hard to reach' groups?		
Encourage and enable the active involvement of local people in community activities	Will it encourage engagement with community activities?	0	No facilities lost, and no new facilities proposed directly as a result of the development.	

Economic Activity		Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	0	Development would have no effect on employment land or premises.
	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	Development would have no effect on vitality or viability of existing centres. The indicator is likely to apply particularly to sites which include retail, offices, or leisure uses.
		Will it encourage the rural economy and diversification, and support sustainable tourism?		
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it contribute to providing a range of employment opportunities, in accessible locations?	+	23.28 minutes from site to nearest employment area with 2000+ employees. 4 employment areas with 2000+ employees that can be accessed in less than 30mins - 1.6km walk.
		Will it improve the level of investment in key community services and infrastructure, including broadband?	+	Minor Utilities Infrastructure improvements required, but constraints can be addressed. There is insufficient spare mains water capacity within the distribution zone to supply the number of proposed properties which could arise if all the SHLAA sites within the zone were to be developed. The sewerage network is approaching capacity and will require mitigation.
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve access to education and training, and support provision of skilled employees to the economy?	-	School capacity not sufficient, but significant issues can be adequately addressed

Transport	Reduce the need to travel and promote more sustainable transport choices.	Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	+++	Total score of 20.
		Sub-indicator: Distance to bus stop / rail station	+++	236m ACF from the centre of the site to the nearest bus stop
		Sub-indicator: Frequency of Public Transport	-	Hourly Service.
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	+++	18 minutes from Barton to Cambridge.
		Sub-indicator: Distance for cycling to City Centre or Market Town	+++	4.98km ACF from the centre of the site to Cambridge Market.
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	0	No capacity constraints identified, safe access can be achieved.
		Will it make the transport network safer for and promote use of non-motorised modes?	0	No impact

Site No. Site 223
Address Land north of 18 Comberton Road, Barton
Location Barton
Category of site Group Village
Site area 2.68

Theme	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	0	No previously developed land.
		Will it use land efficiently?		
		Will it protect and enhance the best and most versatile agricultural land?	-	Minor loss of best and most versatile agricultural land (Grades 1 and 2) - small site but all Grade 2.
		Will it avoid the sterilisation of economic mineral reserves? Will it minimise the degradation/loss of soils due to new development?	0	Site not within an area designated in the Minerals and Waste LDF
	Minimise waste production and support the reuse and recycling of waste products	Will it encourage reduction in household waste, and increase waste recovery and recycling?		
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	0	Development unlikely to impact on air quality. Site lies in an area where air quality acceptable.
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	-	Development compatible with neighbouring uses. Some minor to moderate additional road traffic noise generation impact on existing residential due to development related car movements but dependent on location of site entrance
		Will it minimise, and where possible address, land contamination?	0	Development not on land likely to be contaminated. Adjacent to commercial land so may need some assessment.
		Will it protect and where possible enhance the quality of the water environment?	0	Development unlikely to affect water quality. Assumptions for a neutral impact are that appropriate standards and pollution control measures will be achieved through the development process, e.g. as part of Sustainable Drainage Systems (Suds).
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiversity?	0	No impact on protected sites and species (or impacts could be mitigated).
	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	0	Assumptions for a neutral impact are that existing features that warrant retention can be retained or appropriate mitigation will be achieved through the development process.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process.

Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	---	Significant Negative Impact (Development conflicts with landscape character, with significant negative impacts incapable of mitigation) - Part of the rural surroundings of the village. Development of site would extend the built form of the village and reduce the views towards open countryside from approach road into Barton
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	-	Minor Negative Impact (development conflicts with townscape character, minor negative impacts incapable of mitigation) - impact on setting of listed buildings including Clare College Farm.
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	---	Significant Negative Impact on historic Assets (incapable of satisfactory mitigation) – site forms an important part of the setting of a number of listed building including Grade II listed Clare College Farmhouse. Archaeological potential will require further information but the assumption for a neutral impact is that it is likely appropriate mitigation can be achieved through the development process.
	Create places, spaces and buildings that work well, wear well and look good	Will it lead to developments built to a high standard of design and good place making that reflects local character?		
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	0	Standard requirements for renewables would apply.
		Will it promote energy efficiency?		
		Will it minimise contributions to climate change through sustainable construction practices?		
	Reduce vulnerability to future climate change effects	Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	0	Flood Zone 1 and no drainage issues that cannot be appropriately addressed.
		Will it minimise the likely impacts of climate change on the development through appropriate design?		
		Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?		
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?		
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?		

Inclusive Communities - Housing	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	0	Neutral impact (existing features retained or appropriate mitigation).
	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?		
		Will it provide for housing for the ageing population?		
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	No effect on pitch or plot provision.
Inclusive Communities - Redressing inequalities and involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	-	Group Village
		Sub-Indicator: Distance to centre	+++	400m ACF from the centre to Barton Post Office with a cluster of services and facilities within the village.
		Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	0	No facilities lost, and no new facilities proposed directly as a result of the development.
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will improve relations between people from different backgrounds or social groups?		
		Will it redress inequalities?		
		Will it increase the ability of people to influence decisions, including 'hard to reach' groups?		
	Encourage and enable the active involvement of local people in community activities	Will it encourage engagement with community activities?	0	No facilities lost, and no new facilities proposed directly as a result of the development.

Economic Activity		Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	0	Development would have no effect on employment land or premises.
	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	Development would have no effect on vitality or viability of existing centres. The indicator is likely to apply particularly to sites which include retail, offices, or leisure uses.
		Will it encourage the rural economy and diversification, and support sustainable tourism?		
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it contribute to providing a range of employment opportunities, in accessible locations?	+	25.52 minutes from site to nearest employment area with 2000+ employees. 3 employment areas with 2000+ employees that can be accessed in less than 30mins - 1.6km walk.
		Will it improve the level of investment in key community services and infrastructure, including broadband?	+	Minor Utilities Infrastructure improvements required, but constraints can be addressed. There is insufficient spare mains water capacity within the distribution zone to supply the number of proposed properties which could arise if all the SHLAA sites within the zone were to be developed. The sewerage network is approaching capacity and will require mitigation.
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve access to education and training, and support provision of skilled employees to the economy?	-	School capacity not sufficient, but significant issues can be adequately addressed

Transport	Reduce the need to travel and promote more sustainable transport choices.	Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	+	Total score of 18.
		Sub-indicator: Distance to bus stop / rail station	+++	384m ACF from the centre of the site to the nearest bus stop
		Sub-indicator: Frequency of Public Transport	-	Hourly Service.
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	+++	18 minutes from Barton to Cambridge.
		Sub-indicator: Distance for cycling to City Centre or Market Town	+	5.07km ACF from the centre of the site to Cambridge Market.
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	0	No capacity constraints identified, safe access can be achieved.
		Will it make the transport network safer for and promote use of non-motorised modes?	0	No impact

Site No. Site 224
Address Land south of Comberton Road, Barton
Location Barton
Category of site Group Village
Site area 9.05

Theme	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	0	No previously developed land.
		Will it use land efficiently?		
		Will it protect and enhance the best and most versatile agricultural land?	-	Minor loss of best and most versatile agricultural land (Grades 1 and 2) - small site but all Grade 2.
		Will it avoid the sterilisation of economic mineral reserves? Will it minimise the degradation/loss of soils due to new development?	0	Site is partly within an area designated in the Minerals and Waste LDF but development would not have a negative impact
	Minimise waste production and support the reuse and recycling of waste products	Will it encourage reduction in household waste, and increase waste recovery and recycling?		
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	0	Development unlikely to impact on air quality. Site lies in an area where air quality acceptable.
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	-	Development compatible with neighbouring uses. Environmental Health concerned about noise impact from commercial site adjacent to site. Some minor to moderate additional road traffic noise generation impact on existing residential due to development related car movements but dependent on location of site entrance
		Will it minimise, and where possible address, land contamination?	0	Development not on land likely to be contaminated.
		Will it protect and where possible enhance the quality of the water environment?	0	Development unlikely to affect water quality. Assumptions for a neutral impact are that appropriate standards and pollution control measures will be achieved through the development process, e.g. as part of Sustainable Drainage Systems (Suds).
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiversity?	0	No impact on protected sites and species (or impacts could be mitigated).
	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	0	Assumptions for a neutral impact are that existing features that warrant retention can be retained or appropriate mitigation will be achieved through the development process.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process.

Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	---	Significant Negative Impact (Development conflicts with landscape character, with significant negative impacts incapable of mitigation) - the site is clearly part of the open countryside extending on this side of the village. Development of site would extend the built form of the village into open countryside.
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	0	Neutral impact (generally compatible, or capable of being made compatible with local townscape character). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process.
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	-	Minor Negative Impact on historic Assets (incapable of satisfactory mitigation) – site forms an important part of the setting of a number of Grade II Listed buildings in Comberton Rd Archaeological potential will require further information but the assumption for a neutral impact is that it is likely appropriate mitigation can be achieved through the development process.
	Create places, spaces and buildings that work well, wear well and look good	Will it lead to developments built to a high standard of design and good place making that reflects local character?		
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	0	Standard requirements for renewables would apply.
		Will it promote energy efficiency?		
		Will it minimise contributions to climate change through sustainable construction practices?		
	Reduce vulnerability to future climate change effects	Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	0	Flood Zone 1 and no drainage issues that cannot be appropriately addressed.
		Will it minimise the likely impacts of climate change on the development through appropriate design?		
Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?				
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?		
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?		

Inclusive Communities - Housing	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	0	Neutral impact (existing features retained or appropriate mitigation).
	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?		
		Will it provide for housing for the ageing population?		
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	No effect on pitch or plot provision.
Inclusive Communities - Redressing inequalities and involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	-	Group Village
		Sub-Indicator: Distance to centre	0	606m ACF from the centre to Barton Post Office with a cluster of services and facilities within the village.
		Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	0	No facilities lost, and no new facilities proposed directly as a result of the development.
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will improve relations between people from different backgrounds or social groups?		
		Will it redress inequalities?		
		Will it increase the ability of people to influence decisions, including 'hard to reach' groups?		
	Encourage and enable the active involvement of local people in community activities	Will it encourage engagement with community activities?	0	No facilities lost, and no new facilities proposed directly as a result of the development.

Economic Activity		Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	0	Development would have no effect on employment land or premises.
	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	Development would have no effect on vitality or viability of existing centres. The indicator is likely to apply particularly to sites which include retail, offices, or leisure uses.
		Will it encourage the rural economy and diversification, and support sustainable tourism?		
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it contribute to providing a range of employment opportunities, in accessible locations?	+	28.85 minutes from site to nearest employment area with 2000+ employees. Only 1 employment area with 2000+ employees that can be accessed in less than 30mins - 1.6km walk.
		Will it improve the level of investment in key community services and infrastructure, including broadband?	+	Minor Utilities Infrastructure improvements required, but constraints can be addressed. There is insufficient spare mains water capacity within the distribution zone to supply the number of proposed properties which could arise if all the SHLAA sites within the zone were to be developed. The sewerage network is approaching capacity and will require mitigation.
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve access to education and training, and support provision of skilled employees to the economy?	-	School capacity not sufficient, but significant issues can be adequately addressed

Transport	Reduce the need to travel and promote more sustainable transport choices.	Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	+	Total score of 16.
		Sub-indicator: Distance to bus stop / rail station	+	587m ACF from the centre of the site to the nearest bus stop
		Sub-indicator: Frequency of Public Transport	-	Hourly Service.
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	+++	18 minutes from Barton to Cambridge.
		Sub-indicator: Distance for cycling to City Centre or Market Town	+	5.41km ACF from the centre of the site to Cambridge Market.
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	0	No capacity constraints identified, safe access can be achieved.
		Will it make the transport network safer for and promote use of non-motorised modes?	0	No impact

Site No. Site 225
Address Land to west of Cambridge Road and south of New Road, Barton
Location Barton
Category of site Group Village
Site area 6.66

Theme	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	0	No previously developed land.
		Will it use land efficiently?		
		Will it protect and enhance the best and most versatile agricultural land?	-	Minor loss of best and most versatile agricultural land (Grades 1 and 2) - small site but all Grade 2.
		Will it avoid the sterilisation of economic mineral reserves? Will it minimise the degradation/loss of soils due to new development?	0	Site is partly within an area designated in the Minerals and Waste LDF but development would not have a negative impact
	Minimise waste production and support the reuse and recycling of waste products	Will it encourage reduction in household waste, and increase waste recovery and recycling?		
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	0	Development unlikely to impact on air quality. Site lies in an area where air quality acceptable.
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	-	Development compatible with neighbouring uses. Environmental Health concerned about noise from busy Cambridge Road/A603 which is adjacent to site. Some minor to moderate additional road traffic noise generation impact on existing residential due to development related car movements but dependent on location of site entrance
		Will it minimise, and where possible address, land contamination?	0	Development not on land likely to be contaminated. But adjacent to former sewerage works so may need assessment.
		Will it protect and where possible enhance the quality of the water environment?	0	Development unlikely to affect water quality. Assumptions for a neutral impact are that appropriate standards and pollution control measures will be achieved through the development process, e.g. as part of Sustainable Drainage Systems (Suds).
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiversity?	0	No impact on protected sites and species (or impacts could be mitigated).
	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	0	Assumptions for a neutral impact are that existing features that warrant retention can be retained or appropriate mitigation will be achieved through the development process.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process.

Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	---	Significant Negative Impact (Development conflicts with landscape character, with significant negative impacts incapable of mitigation) - the site is clearly part of the open countryside on this side of the village.
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	-	Minor Negative Impact (development conflicts with townscape character, minor negative impacts incapable of mitigation) - site forms part of setting of number of listed buildings.
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	-	Minor Negative Impact on historic Assets (incapable of satisfactory mitigation) – site forms an important part of the setting of a number of Grade II Listed buildings nearby. Archaeological potential will require further information but the assumption for a neutral impact is that it is likely appropriate mitigation can be achieved through the development process.
	Create places, spaces and buildings that work well, wear well and look good	Will it lead to developments built to a high standard of design and good place making that reflects local character?		
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	0	Standard requirements for renewables would apply.
		Will it promote energy efficiency?		
		Will it minimise contributions to climate change through sustainable construction practices?		
	Reduce vulnerability to future climate change effects	Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	0	Flood Zone 1 and no drainage issues that cannot be appropriately addressed.
		Will it minimise the likely impacts of climate change on the development through appropriate design?		
		Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?		
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?		
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?		

Inclusive Communities - Housing	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	0	Neutral impact (existing features retained or appropriate mitigation).
	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?		
		Will it provide for housing for the ageing population?		
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	No effect on pitch or plot provision.
Inclusive Communities - Redressing inequalities and involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	-	Group Village
		Sub-Indicator: Distance to centre	+	589m ACF from the centre to Barton Post Office with a cluster of services and facilities within the village.
		Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	0	No facilities lost, and no new facilities proposed directly as a result of the development.
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will improve relations between people from different backgrounds or social groups?		
		Will it redress inequalities?		
	Encourage and enable the active involvement of local people in community activities	Will it increase the ability of people to influence decisions, including 'hard to reach' groups?		
Will it encourage engagement with community activities?		0	No facilities lost, and no new facilities proposed directly as a result of the development.	

Economic Activity		Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	0	Development would have no effect on employment land or premises.
	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	Development would have no effect on vitality or viability of existing centres. The indicator is likely to apply particularly to sites which include retail, offices, or leisure uses.
		Will it encourage the rural economy and diversification, and support sustainable tourism?		
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it contribute to providing a range of employment opportunities, in accessible locations?	+	21.71 minutes from site to nearest employment area with 2000+ employees. 5 employment areas with 2000+ employees that can be accessed in less than 30mins - 1.6km walk.
		Will it improve the level of investment in key community services and infrastructure, including broadband?	+	Minor Utilities Infrastructure improvements required, but constraints can be addressed. There is insufficient spare mains water capacity within the distribution zone to supply the number of proposed properties which could arise if all the SHLAA sites within the zone were to be developed. The sewerage network is approaching capacity and will require mitigation.
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve access to education and training, and support provision of skilled employees to the economy?	-	School capacity not sufficient, but significant issues can be adequately addressed

Transport	Reduce the need to travel and promote more sustainable transport choices.	Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	+++	Total score of 20.
		Sub-indicator: Distance to bus stop / rail station	+++	187m ACF from the centre of the site to the nearest bus stop
		Sub-indicator: Frequency of Public Transport	-	Hourly Service.
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	+++	18 minutes from Barton to Cambridge.
		Sub-indicator: Distance for cycling to City Centre or Market Town	+++	4.54km ACF from the centre of the site to Cambridge Market.
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	0	No capacity constraints identified, safe access can be achieved.
		Will it make the transport network safer for and promote use of non-motorised modes?	0	No impact

Site No. Site 226
Address Land to the rear of 98 - 102 High Street Harston
Location Harston
Category of site Group Village
Site area 2.87

Theme	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	0	No previously developed land.
		Will it use land efficiently?		
		Will it protect and enhance the best and most versatile agricultural land?	-	Minor loss of best and most versatile agricultural land (Grades 1 and 2) - small site but all Grade 2 (2.87 ha.).
		Will it avoid the sterilisation of economic mineral reserves? Will it minimise the degradation/loss of soils due to new development?	0	Site within an area designated in the Minerals and Waste LDF but development would not have a negative impact
	Minimise waste production and support the reuse and recycling of waste products	Will it encourage reduction in household waste, and increase waste recovery and recycling?		
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	0	Development unlikely to impact on air quality. Site lies in an area where air quality acceptable.
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	-	Development compatible with neighbouring uses. Some minor to moderate additional road traffic noise generation impact on existing residential due to development related car movements but dependent on location of site entrance.
	Will it protect and enhance the quality of the water environment?	Will it minimise, and where possible address, land contamination?	0	Development not on land likely to be contaminated
		Will it protect and enhance the quality of the water environment?	0	Development unlikely to affect water quality. Assumptions for a neutral impact are that appropriate standards and pollution control measures will be achieved through the development process, e.g. as part of Sustainable Drainage Systems (Suds).
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiversity?	0	No impact on protected sites and species (or impacts could be mitigated). There are protected trees within the grounds of the large property at 94 High Street. Part of this group of trees is adjacent to the south- western boundary of the site.
	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	0	Assumptions for a neutral impact are that existing features that warrant retention can be retained or appropriate mitigation will be achieved through the development process.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process. A footpath from the A10 around the edge of 94 High Street then follows the southern boundary of the site.

Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	---	Significant Negative Impact (Development conflicts with landscape character, with significant negative impacts incapable of mitigation) - Development would result in the loss of a transition landscape between the built edge of the village and wider agricultural landscape. The site forms part of the setting of Listed Building on the opposite side of the A10, and loss of hedgerow to the road frontage to gain access would have a detrimental impact.
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	---	Significant Negative Impact (Development conflicts with townscape character, with significant negative impacts incapable of mitigation) - Development would result in the loss of a transition landscape between the built edge of the village and wider agricultural landscape. The site forms part of the setting of Listed Building on the opposite side of the A10, and loss of hedgerow to the road frontage to gain access would have a detrimental impact.
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	---	Significant Negative Impact on historic Assets (incapable of satisfactory mitigation) - The site forms an important part of the historic and rural setting of this part of the village where there are several Grade II Listed Buildings. Archaeological potential will require further information but it is likely appropriate mitigation can be achieved through the development process.
	Create places, spaces and buildings that work well, wear well and look good	Will it lead to developments built to a high standard of design and good place making that reflects local character?		
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	0	Standard requirements for renewables would apply.
		Will it promote energy efficiency?		
		Will it minimise contributions to climate change through sustainable construction practices?		
	Reduce vulnerability to future climate change effects	Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	0	Flood Zone 1 and no drainage issues that cannot be appropriately addressed.
		Will it minimise the likely impacts of climate change on the development through appropriate design?		
Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?				
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?		
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?		

Inclusive Communities - Housing	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	0	Neutral impact (existing features retained or appropriate mitigation). Assumption is standard requirements for open space would apply.
	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?		
		Will it provide for housing for the ageing population?		
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	No effect on pitch or plot provision.
Inclusive Communities - Redressing inequalities and involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	-	Group Village
		Sub-Indicator: Distance to centre	0	643m ACF to the Pemberton Arms pub - location chosen as representation of central point of these services and facilities.
		Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	0	No facilities lost, and no new facilities proposed directly as a result of the development.
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will improve relations between people from different backgrounds or social groups?		
		Will it redress inequalities?		
	Encourage and enable the active involvement of local people in community activities	Will it increase the ability of people to influence decisions, including 'hard to reach' groups?		
Will it encourage engagement with community activities?		0	No facilities lost, and no new facilities proposed directly as a result of the development.	

Economic Activity		Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	0	Development would have no effect on employment land or premises.
	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	Development would have no effect on vitality or viability of existing centres. The indicator is likely to apply particularly to sites which include retail, offices, or leisure uses.
		Will it encourage the rural economy and diversification, and support sustainable tourism?		
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it contribute to providing a range of employment opportunities, in accessible locations?	+	20.39 minutes from site to nearest employment area with 2000+ employees. 4 employment areas with 2000+ employees can be accessed in less than 30mins - 1.6km walk.
		Will it improve the level of investment in key community services and infrastructure, including broadband?	+	Minor Utilities Infrastructure improvements required, but constraints can be addressed. There is insufficient spare mains water capacity within the distribution zone to supply the number of proposed properties which could arise if all the SHLAA sites within the zone were to be developed. The sewerage network is close to capacity and will require mitigation.
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve access to education and training, and support provision of skilled employees to the economy?	+	Insufficient spare school capacity but potential for improvement to meet needs.

Transport	Reduce the need to travel and promote more sustainable transport choices.	Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	+	Total score of 16.
		Sub-indicator: Distance to bus stop / rail station	+++	184m ACF from the centre of the site to the nearest bus stop.
		Sub-indicator: Frequency of Public Transport	-	Hourly Service.
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	+	20 Minutes from Harston to Cambridge; 21 Minutes from Harston to Royston.
		Sub-indicator: Distance for cycling to City Centre or Market Town	+	7.49km ACF from the centre of the site to Cambridge Market.
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	0	No capacity constraints identified, safe access can be achieved.
		Will it make the transport network safer for and promote use of non-motorised modes?	0	No impact.

Site No. Site 227
Address Land off Villa Road, Histon
Location Histon & Impington
Category of site Rural Centre
Site area 6.64

Theme	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	0	No previously developed land.
		Will it use land efficiently?		
		Will it protect and enhance the best and most versatile agricultural land?	-	Minor loss of best and most versatile agricultural land (Grades 1 and 2) - small site but all Grade 2.
		Will it avoid the sterilisation of economic mineral reserves? Will it minimise the degradation/loss of soils due to new development?	0	Site within an area designated in the Minerals and Waste LDF but development would not have a negative impact.
	Minimise waste production and support the reuse and recycling of waste products	Will it encourage reduction in household waste, and increase waste recovery and recycling?		
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	0	Development unlikely to impact on air quality. Site lies in an area where air quality acceptable.
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	0	Development compatible with neighbouring uses. Some potential for traffic noise from A14, but should be possible to mitigate.
		Will it minimise, and where possible address, land contamination?	+	Site contains an area of filled land. Potential for minor benefits through remediation of minor contamination
		Will it protect and where possible enhance the quality of the water environment?	0	Assumptions for a neutral impact are that appropriate standards and pollution control measures will be achieved through the development process, e.g. as part of Sustainable Drainage Systems (Suds).
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiversity?	0	No impact on protected sites and species (or impacts could be mitigated).
	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	0	Assumptions for a neutral impact are that existing features that warrant retention can be retained or appropriate mitigation will be achieved through the development process.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process.

Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	---	Significant Negative Impact (Development conflicts with landscape character, with significant negative impacts incapable of mitigation) - The site is on the edge of the village and has a soft boundary, with trees and scrub providing a buffer area between the built-up area and the wider countryside. It provides an area of contrast with the wider open landscape. The land is within the Green Belt in an area where development would have a significant adverse impact on Green Belt purposes and functions, where the landscape is open with long views to be had across towards Cambridge and Girton.
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	-	Minor Negative Impact (development conflicts with townscape character, minor negative impacts incapable of mitigation) - The character of this part of the village is linear estate development with intermittent hedging to the east forming a fairly exposed edge to farmland. The land is within the Green Belt in an area where development would have a significant adverse impact on Green Belt purposes and functions, where the landscape is open with long views to be had across towards Cambridge and Girton.
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Archaeological potential will require further information but the assumption for a neutral impact is that it is likely appropriate mitigation can be achieved through the development process.
	Create places, spaces and buildings that work well, wear well and look good	Will it lead to developments built to a high standard of design and good place making that reflects local character?		
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	0	Standard requirements for renewables would apply.
		Will it promote energy efficiency?		
		Will it minimise contributions to climate change through sustainable construction practices?		
	Reduce vulnerability to future climate change effects	Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	- / ---	Flood Zone 3 (or other form of flood risk incapable of appropriate mitigation) - A large proportion of the site (approximately 4/5ths) is within flood zones 2 and 3. However, the land closest to the village framework is Flood Zone 1.
		Will it minimise the likely impacts of climate change on the development through appropriate design?		
	Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?			
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?		
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?		
	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	0	Neutral impact (existing features retained or appropriate mitigation).

Inclusive Communities - Housing	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?		
		Will it provide for housing for the ageing population?		
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	No effect on pitch or plot provision.
Inclusive Communities - Redressing Inequalities and Involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	+	Rural Centre
		Sub-Indicator: Distance to centre	---	1,008m ACF to a point on High Street which is surrounded by a large number of services and facilities.
		Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	0	No facilities lost, and no new facilities proposed directly as a result of the development.
		Will improve relations between people from different backgrounds or social groups?		
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will it redress inequalities?		
		Will it increase the ability of people to influence decisions, including 'hard to reach' groups?		
Encourage and enable the active involvement of local people in community activities	Will it encourage engagement with community activities?	0	No facilities lost, and no new facilities proposed directly as a result of the development.	

Economic Activity		Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	0	Development would have no effect on employment land or premises.
	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	Development would have no effect on vitality or viability of existing centres. The assumption is that any retail proposed will only be of a suitable scale to serve needs of new residents and will not impact on other centres.
		Will it encourage the rural economy and diversification, and support sustainable tourism?		
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it contribute to providing a range of employment opportunities, in accessible locations?	+++	6.07 minutes from site to nearest employment area with 2000+ employees. 8 employment areas with 2000+ employees that can be accessed in less than 30mins - 1.6km walk.
		Will it improve the level of investment in key community services and infrastructure, including broadband?	+	Minor Utilities Infrastructure improvements required, but constraints can be addressed. There is insufficient spare mains water capacity within the distribution zone to supply the number of proposed properties which could arise if all the SHLAA sites within the zone were to be developed. The sewerage network is approaching capacity and will require investigation and possibly mitigation.
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve access to education and training, and support provision of skilled employees to the economy?	+	Insufficient spare school capacity but potential for improvement to meet needs. Insufficient secondary school capacity. Promoter proposes additional primary school provision.

Transport		Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	+++	Total score of 22.
	Reduce the need to travel and promote more sustainable transport choices.	Sub-indicator: Distance to bus stop / rail station	+	452m ACF from the centre of the site to the nearest bus stop (Guided Busway).
		Sub-indicator: Frequency of Public Transport	+++	The Guided Busway provides a 10 Minute Service.
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	+++	Guided Busway - 17 Minutes from Histon to Cambridge.
		Sub-indicator: Distance for cycling to City Centre or Market Town	+++	4.33km ACF from the centre of the site to Cambridge Market.
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	- / 0	Minor negative effects incapable of mitigation. Access constraints - The proposed site does not appear to have a direct link to the adopted public highway. (Note - the Highway Authority are in communication with the landowner of the SCA Packaging Ltd site at present to provide a connection to the public highway.)
		Will it make the transport network safer for and promote use of non-motorised modes?	+	The Highway Authority will require new development to provide or contribute to the provision of infrastructure to encourage more sustainable transport links both on and off site. Provision or contribution from this site would result in minor improvement to public transport, walking or cycling facilities.

Site No. Site 228
Address Land south of 92 High Street, Harston
Location Harston
Category of site Group Village
Site area 4.01

Theme	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	0	No previously developed land.
		Will it use land efficiently?		
		Will it protect and enhance the best and most versatile agricultural land?	-	Minor loss of best and most versatile agricultural land (Grades 1 and 2) - small site but all Grade 2 (4.01 ha.).
		Will it avoid the sterilisation of economic mineral reserves? Will it minimise the degradation/loss of soils due to new development?	0	Site within an area designated in the Minerals and Waste LDF but development would not have a negative impact
	Minimise waste production and support the reuse and recycling of waste products	Will it encourage reduction in household waste, and increase waste recovery and recycling?		
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	0	Development unlikely to impact on air quality. Site lies in an area where air quality acceptable.
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	-	Development compatible with neighbouring uses. Noise from High St but can be mitigated by design and layout, which may influence density. Some minor to moderate additional road traffic noise generation impact on existing residential due to development related car movements but dependent on location of site entrance.
		Will it minimise, and where possible address, land contamination?	0	Development not on land likely to be contaminated
		Will it protect and where possible enhance the quality of the water environment?	0	Development unlikely to affect water quality. Assumptions for a neutral impact are that appropriate standards and pollution control measures will be achieved through the development process, e.g. as part of Sustainable Drainage Systems (Suds).
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiversity?	0	No impact on protected sites and species (or impacts could be mitigated). Within the grounds of Park House near to the road there is a large group of protected trees.
	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	0	Assumptions for a neutral impact are that existing features that warrant retention can be retained or appropriate mitigation will be achieved through the development process.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process. A track follows the northern boundary of the site from the A10 in an eastward direction.

Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	---	Significant Negative Impact (Development conflicts with landscape character, with significant negative impacts incapable of mitigation) - Development of this large site would result in the loss of countryside which forms an important part of the rural character of this part of the village, designated Important Countryside Frontage. The land forms a transition landscape between the built edge of the village and wider agricultural landscape. The site forms part of the setting of Listed Building on the opposite side of the A10 and development would have a detrimental impact on their setting.
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	---	Significant Negative Impact (Development conflicts with townscape character, with significant negative impacts incapable of mitigation) - Development of this large site would result in the loss of countryside which forms an important part of the rural character of this part of the village, designated Important Countryside Frontage. The land forms a transition landscape between the built edge of the village and wider agricultural landscape. The site forms part of the setting of Listed Building on the opposite side of the A10 and development would have a detrimental impact on their setting.
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	---	Significant Negative Impact on historic Assets (incapable of satisfactory mitigation) - The site forms an important part of the historic and rural setting of this part of the village where there are several Grade II Listed Buildings. Archaeological potential will require further information but it is likely appropriate mitigation can be achieved through the development process.
	Create places, spaces and buildings that work well, wear well and look good	Will it lead to developments built to a high standard of design and good place making that reflects local character?		
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	0	Standard requirements for renewables would apply.
		Will it promote energy efficiency?		
		Will it minimise contributions to climate change through sustainable construction practices?		
	Reduce vulnerability to future climate change effects	Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	0	Flood Zone 1 and no drainage issues that cannot be appropriately addressed.
		Will it minimise the likely impacts of climate change on the development through appropriate design?		
		Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?		
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?		
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?		

Inclusive Communities - Housing	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	0	Neutral impact (existing features retained or appropriate mitigation). Assumption is standard requirements for open space would apply.
	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?		
		Will it provide for housing for the ageing population?		
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	No effect on pitch or plot provision.
Inclusive Communities - Redressing inequalities and involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	-	Group Village
		Sub-Indicator: Distance to centre	+	508m ACF to the Pemberton Arms pub - location chosen as representation of central point of these services and facilities.
		Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	0	No facilities lost, and no new facilities proposed directly as a result of the development.
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will improve relations between people from different backgrounds or social groups?		
		Will it redress inequalities?		
	Encourage and enable the active involvement of local people in community activities	Will it increase the ability of people to influence decisions, including 'hard to reach' groups?		
Will it encourage engagement with community activities?		0	No facilities lost, and no new facilities proposed directly as a result of the development.	

Economic Activity		Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	0	Development would have no effect on employment land or premises.
	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	Development would have no effect on vitality or viability of existing centres. The indicator is likely to apply particularly to sites which include retail, offices, or leisure uses.
		Will it encourage the rural economy and diversification, and support sustainable tourism?		
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it contribute to providing a range of employment opportunities, in accessible locations?	+	21.63 minutes from site to nearest employment area with 2000+ employees. 3 employment areas with 2000+ employees can be accessed in less than 30mins - 1.6km walk.
		Will it improve the level of investment in key community services and infrastructure, including broadband?	+	Minor Utilities Infrastructure improvements required, but constraints can be addressed. There is insufficient spare mains water capacity within the distribution zone to supply the number of proposed properties which could arise if all the SHLAA sites within the zone were to be developed. The sewerage network is close to capacity and will require mitigation.
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve access to education and training, and support provision of skilled employees to the economy?	+	Insufficient spare school capacity but potential for improvement to meet needs.

Transport	Reduce the need to travel and promote more sustainable transport choices.	Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	+	Total score of 16.
		Sub-indicator: Distance to bus stop / rail station	+++	224m ACF from the centre of the site to the nearest bus stop.
		Sub-indicator: Frequency of Public Transport	-	Hourly Service.
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	+	20 Minutes from Harston to Cambridge; 21 Minutes from Harston to Royston.
		Sub-indicator: Distance for cycling to City Centre or Market Town	+	7.49km ACF from the centre of the site to Cambridge Market.
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	0	No capacity constraints identified, safe access can be achieved.
		Will it make the transport network safer for and promote use of non-motorised modes?	0	No impact.

Site No. Site 229
Address Land opposite 30 Pipers Close and between Appleacre Park Caravan site and Lanacre, Fowlme
Location Fowlmere
Category of site Group Village
Site area 0.67

Theme	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	0	No previously developed land.
		Will it use land efficiently?		
		Will it protect and enhance the best and most versatile agricultural land?	-	Minor loss of best and most versatile agricultural land (Grades 1 and 2) - small site but all Grade 2
		Will it avoid the sterilisation of economic mineral reserves? Will it minimise the degradation/loss of soils due to new development?	0	Site not within an area designated in the Minerals and Waste LDF.
	Minimise waste production and support the reuse and recycling of waste products	Will it encourage reduction in household waste, and increase waste recovery and recycling?		
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	0	Development unlikely to impact on air quality. Site lies in an area where air quality acceptable.
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	0	Development compatible with neighbouring uses.
		Will it minimise, and where possible address, land contamination?	0	Development not on land likely to be contaminated
		Will it protect and where possible enhance the quality of the water environment?	0	Assumptions for a neutral impact are that appropriate standards and pollution control measures will be achieved through the development process, e.g. as part of Sustainable Drainage Systems (Suds).
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiversity?	0	No impact on protected sites and species (or impacts could be mitigated).
	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	0	Assumptions for a neutral impact are that existing features that warrant retention can be retained or appropriate mitigation will be achieved through the development process.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process.

Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	-	Minor Negative Impact (Development conflicts with landscape character, minor negative impacts incapable of mitigation) - Clear views into the site from housing on opposite side of road. Site is open green space forming area part of countryside adjoining Fowlmere.
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	-	Minor Negative Impact (development conflicts with townscape character, minor negative impacts incapable of mitigation) - Development would be contrary to linear form of this part of village
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Archaeological potential will require further information but the assumption for a neutral impact is that it is likely appropriate mitigation can be achieved through the development process.
	Create places, spaces and buildings that work well, wear well and look good	Will it lead to developments built to a high standard of design and good place making that reflects local character?		
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	0	Standard requirements for renewables would apply.
		Will it promote energy efficiency?		
		Will it minimise contributions to climate change through sustainable construction practices?		
	Reduce vulnerability to future climate change effects	Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	0	Flood Zone 1 and no drainage issues that cannot be appropriately addressed.
		Will it minimise the likely impacts of climate change on the development through appropriate design?		
Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?				
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?		
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?		

Inclusive Communities - Housing	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	0	Neutral impact (existing features retained or appropriate mitigation).
	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?		
		Will it provide for housing for the ageing population?		
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	No effect on pitch or plot provision.
Inclusive Communities - Redressing inequalities and involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	-	Group Village
		Sub-Indicator: Distance to centre	0	763m ACF to The Chequers Inn Pub - location chosen as representation of central point of services and facilities.
		Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	0	No facilities lost, and no new facilities proposed directly as a result of the development.
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will improve relations between people from different backgrounds or social groups?		
		Will it redress inequalities?		
	Encourage and enable the active involvement of local people in community activities	Will it increase the ability of people to influence decisions, including 'hard to reach' groups?		
Will it encourage engagement with community activities?		0	No facilities lost, and no new facilities proposed directly as a result of the development.	

Economic Activity		Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	0	Development would have no effect on employment land or premises.
	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	Development would have no effect on vitality or viability of existing centres. The indicator is likely to apply particularly to sites which include retail, offices, or leisure uses.
		Will it encourage the rural economy and diversification, and support sustainable tourism?		
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it contribute to providing a range of employment opportunities, in accessible locations?	0	41.81 minutes from site to nearest employment area with 2000+ employees. No employment areas with 2000+ employees that can be accessed in less than 30mins - 1.6km walk.
		Will it improve the level of investment in key community services and infrastructure, including broadband?	+	Minor Utilities Infrastructure improvements required, but constraints can be addressed. There is insufficient spare mains water capacity within the distribution zone to supply the number of proposed properties which could arise if all the SHLAA sites within the zone were to be developed. The sewerage network is at capacity and will require mitigation.
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve access to education and training, and support provision of skilled employees to the economy?	-	School capacity not sufficient, but significant issues can be adequately addressed

Transport	Reduce the need to travel and promote more sustainable transport choices.	Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	0	Total score of 12.
		Sub-indicator: Distance to bus stop / rail station	+++	131m ACF from the centre of the site to the nearest bus stop.
		Sub-indicator: Frequency of Public Transport	---	Less than hourly service.
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	-	45-55 Minutes from Fowlmere to Cambridge.
		Sub-indicator: Distance for cycling to City Centre or Market Town	+	7.96km ACF from the centre of the site to Royston Market.
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	0	No capacity constraints identified, safe access can be achieved.
		Will it make the transport network safer for and promote use of non-motorised modes?	0	No impact

Site No. Site 230
Address Mill Lane, Sawston
Location Sawston
Category of site Rural Centre
Site area 1.48

Theme	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	0	No previously developed land.
		Will it use land efficiently?		
		Will it protect and enhance the best and most versatile agricultural land?	0	Development would not affect best and most versatile agricultural land (Grades 1 and 2).
		Will it avoid the sterilisation of economic mineral reserves? Will it minimise the degradation/loss of soils due to new development?	0	Site within an area designated in the Minerals and Waste LDF but development would not have a negative impact
	Minimise waste production and support the reuse and recycling of waste products	Will it encourage reduction in household waste, and increase waste recovery and recycling?		
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	0	Development unlikely to impact on air quality. Site lies in an area where air quality acceptable.
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	0	Development compatible with neighbouring uses. Noise from Cambridge Road but can be mitigated by design and layout, which may influence density.
		Will it minimise, and where possible address, land contamination?	0	Development not on land likely to be contaminated
		Will it protect and where possible enhance the quality of the water environment?	0	Development unlikely to affect water quality. The site within Groundwater Source Protection Zone 2 which does not rule out development but may influence land use or require pollution control measures. Assumptions for a neutral impact are that appropriate standards and pollution control measures will be achieved through the development process and will mitigate any impact on groundwater.
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiversity?	0	No impact on protected sites and species (or impacts could be mitigated). TPO running along southern site boundary. The trees present on all other boundaries look significant and will need to be retained using current best practice and guidance unless detailed tree surveys prove otherwise
	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	0	Assumptions for a neutral impact are that existing features that warrant retention can be retained or appropriate mitigation will be achieved through the development process.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process.

Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	0	Neutral impact (generally compatible, or capable of being made compatible with local landscape character). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process. Development of this site would have an adverse impact on the landscape setting of Sawston by introducing built development into a small enclosed field visible from the west. It should be possible to mitigate impacts on the landscape through retention of trees and hedges.
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	-	Minor Negative Impact (development conflicts with townscape character, minor negative impacts incapable of mitigation) - Development of this site would have an adverse impact on the landscape setting of Sawston by introducing built development into a small enclosed field visible from the west. The site is located in a historically sensitive part of the village and would have an adverse impact on the setting of historic features.
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	---	Significant Negative Impact on historic Assets (incapable of satisfactory mitigation) - Within setting of 28 Mill Lane (LB Grade II). Adverse effect due to loss of trees at entrance on approach to LB, loss of openness and rural setting. The site is located to the east of the nationally important Iron Age ringwork Borough Hill.
	Create places, spaces and buildings that work well, wear well and look good	Will it lead to developments built to a high standard of design and good place making that reflects local character?		
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	0	Standard requirements for renewables would apply.
		Will it promote energy efficiency?		
		Will it minimise contributions to climate change through sustainable construction practices?		
	Reduce vulnerability to future climate change effects	Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	-	Flood Zone 2, drainage issues capable of being appropriately addressed.
		Will it minimise the likely impacts of climate change on the development through appropriate design?		
	Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?			
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?		
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?		

Inclusive Communities - Housing	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	0	Neutral impact (existing features retained or appropriate mitigation).
	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?		
		Will it provide for housing for the ageing population?		
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	No effect on pitch or plot provision.
Inclusive Communities - Redressing inequalities and involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	+	Rural Centre.
		Sub-Indicator: Distance to centre	0	710m ACF from the centre of the site Sawston High Street -a cluster of services and facilities within the village.
		Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	0	No facilities lost, and no new facilities proposed directly as a result of the development.
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will improve relations between people from different backgrounds or social groups?		
		Will it redress inequalities?		
		Will it increase the ability of people to influence decisions, including 'hard to reach' groups?		
	Encourage and enable the active involvement of local people in community activities	Will it encourage engagement with community activities?	0	No facilities lost, and no new facilities proposed directly as a result of the development.

Economic Activity		Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	0	Development would have no effect on employment land or premises.
	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	Development would have no effect on vitality or viability of existing centres. The indicator is likely to apply particularly to sites which include retail, offices, or leisure uses.
		Will it encourage the rural economy and diversification, and support sustainable tourism?		
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it contribute to providing a range of employment opportunities, in accessible locations?	+	27.81 minutes from site to nearest employment area with 2000+ employees. Only 1 employment area with 2000+ employees that can be accessed in less than 30mins - 1.6km walk.
		Will it improve the level of investment in key community services and infrastructure, including broadband?	-	Minor Utilities Infrastructure improvements required, but constraints can be addressed. There is insufficient spare mains water capacity within the distribution zone to supply the number of proposed properties which could arise if all the SHLAA sites within the zone were to be developed. The sewerage network is approaching capacity and will require investigation and possibly mitigation.
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve access to education and training, and support provision of skilled employees to the economy?	+	Insufficient spare school capacity but potential for improvement to meet needs. Insufficient secondary school capacity.

Transport	Reduce the need to travel and promote more sustainable transport choices.	Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	0	Total score of 14.
		Sub-indicator: Distance to bus stop / rail station	0	712m ACF from the centre of the site to the nearest bus stop.
		Sub-indicator: Frequency of Public Transport	+	20 minute service to Cambridge. Hourly service to Saffron Walden.
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	0	39 Minutes from Sawston to Cambridge. 29 Minutes from Sawston to Saffron Walden.
		Sub-indicator: Distance for cycling to City Centre or Market Town	+	9.59km ACF from the centre of the site to Cambridge Market.
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	0	No capacity constraints identified, safe access can be achieved.
		Will it make the transport network safer for and promote use of non-motorised modes?	0	No impact.

Site No. Site 231
Address Land north of Waterbeach
Location Waterbeach
Category of site New Settlement
Site area 558.68

Theme	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	+++	25% to 74% Previously Developed Land (PDL). Military barracks and airfield.
		Will it use land efficiently?		
		Will it protect and enhance the best and most versatile agricultural land?	---	Significant loss (20 hectares or more) of best and most versatile agricultural land (Grades 1 and 2) - majority of site is classified as Grade 2, with some Grade 3. Airfield is unclassified.
		Will it avoid the sterilisation of economic mineral reserves? Will it minimise the degradation/loss of soils due to new development?	-	Site falls within a designated area in the Minerals and Waste LDF, development would have minor negative impacts on identified Minerals Reserves.
	Minimise waste production and support the reuse and recycling of waste products	Will it encourage reduction in household waste, and increase waste recovery and recycling?		
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	0	Development unlikely to impact on air quality. Site lies in an area where air quality acceptable. The site is of a significant size and therefore there is a potential for an increase in traffic and static emissions that could affect local air quality.
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	0	Development compatible with neighbouring uses. Some potential for traffic noise from A10 and railway, but should be possible to mitigate. Small part of the site is within a WWTW safeguarding Area of the Cambridgeshire & Peterborough Minerals and Waste LDF. Core Strategy policy CS31 establishes a presumption against allowing development that would be occupied by people because of the impact on amenity caused by offensive odours from the site. Where new development is proposed it must be accompanied by an odour assessment report. Development could expose residents to offensive odours with significant negative impacts incapable of adequate mitigation. Developers propose to move the WWTW off site which would mitigate this impact.
		Will it minimise, and where possible address, land contamination?	+	Potential for minor benefits through remediation of minor contamination, the site has a number of potential sources of contamination- previous military land, areas of filled ground, a sewerage works and also adjacent to railway line and landfill.
		Will it protect and where possible enhance the quality of the water environment?	0	Development unlikely to affect water quality. Assumptions for a neutral impact are that appropriate standards and pollution control measures will be achieved through the development process and will mitigate any impact on groundwater.

Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiversity?	0	No impact on protected sites and species (or impacts could be mitigated).
	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	+++	Assumptions for a significant positive impact are that opportunities for enhancement and new features will be achieved and that risks of negative impact (loss of existing features) will be satisfactorily mitigated, opportunities include new woodland, hedgerows, grassland, watercourses and ponds.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	+++	Development would deliver significant new Green Infrastructure. The proposed development includes around 114 hectares of new public open space and a 92 hectare landscaped setting for Denny Abbey.
Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	---	Significant Negative Impact (Development conflicts with landscape character, with significant negative impacts incapable of mitigation). The scale and character of the proposed development would be visible over large areas, and the likely scale and type of buildings would form developed skylines to the north, south and east. Folds and slopes within the landform of the development site would mean a high inter-visibility between sections of the development and reinforce its total dominance in the landscape when viewed from outside the site. Development would be very large in relation to the existing settlements and of such a different character that it would have a very significant adverse effect on them. The landscape would be unable to accommodate development of the proposed type and scale without total and adverse character change. The development conflicts directly with the Landscape Character.
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	0	Neutral impact (generally compatible, or capable of being made compatible with local townscape character). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process.
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	-	Minor Negative Impact on historic Assets (incapable of satisfactory mitigation) - 4 Listed Buildings on site (in East Cambridgeshire) and numerous Bronze Age barrows known in the area, a significant number of which are designated Scheduled Monuments. Archaeological potential will require further information but the assumption for a neutral impact is that it is likely appropriate mitigation can be achieved through the development process.
	Create places, spaces and buildings that work well, wear well and look good	Will it lead to developments built to a high standard of design and good place making that reflects local character?		

Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	+++	Development would create major additional opportunities for renewable energy based upon potential for combined heat and power.
		Will it promote energy efficiency?		
		Will it minimise contributions to climate change through sustainable construction practices?		
	Reduce vulnerability to future climate change effects	Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	0	Great majority of site within Flood Zone 1 and no drainage issues that cannot be appropriately addressed.
		Will it minimise the likely impacts of climate change on the development through appropriate design?		
		Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?		
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?		
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?		
Inclusive Communities - Housing	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	+++	Development would deliver significant new public open space (around 114 hectares of new public open space).
		Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?		
	Ensure all groups have access to decent, appropriate and affordable housing	Will it provide for housing for the ageing population?		
Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?		0	No effect on pitch or plot provision.	

Inclusive Communities - Redressing inequalities and involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	+	New settlement proposal to include substantial retail, health, community and leisure facilities.
		Sub-Indicator: Distance to centre	0	Centre point of site beyond 1000m of nearest existing centre Majority of site would be within 800m of any new local centre developed as part of site.
		Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	+++	New local facilities or improved existing facilities are proposed of significant benefit. Proposal to include new secondary and primary schools, a large medical centre, retail, leisure and sports facilities
		Will improve relations between people from different backgrounds or social groups?		
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will it redress inequalities?		
		Will it increase the ability of people to influence decisions, including 'hard to reach' groups?		
	Encourage and enable the active involvement of local people in community activities	Will it encourage engagement with community activities?	+++	New local community / village hall or improved existing facility is proposed of significant benefit (and is viable and sustainable). Submission states that a number of community centres will be provided to include halls, libraries and places of faith

Economic Activity		Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	+++	Development would significantly enhance employment opportunities. The proposed submission includes 207,893 sqm employment floorspace and around 7,600 jobs.
	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	Development would have no effect on vitality or viability of existing centres. The assumption is that the town and local centre proposals will only be of a suitable scale to serve needs of new residents and will not impact on other centres.
		Will it encourage the rural economy and diversification, and support sustainable tourism?		
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it contribute to providing a range of employment opportunities, in accessible locations?	0	41.03 minutes from site to nearest employment area with 2000+ employees. No employment areas with 2000+ employees that can be accessed in less than 30mins - 1.6km walk.
		Will it improve the level of investment in key community services and infrastructure, including broadband?	-	Major utilities Infrastructure improvements required, but constraints can be addressed. The electricity, mains water, gas and sewerage systems will need reinforcement to increase capacity.
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve access to education and training, and support provision of skilled employees to the economy?	-	School capacity not sufficient, but significant issues can be adequately addressed by the construction of new secondary and primary schools.

Transport	Reduce the need to travel and promote more sustainable transport choices.	Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	+	Total score of 15.
		Sub-indicator: Distance to bus stop / rail station	0	New settlement would require new bus stops which would mostly fall within 800m of the site. 1,448m ACF from the centre of the site to the nearest bus stop (196 service). 1,584m ACF from the centre of the site to the nearest bus stop (9 service).
		Sub-indicator: Frequency of Public Transport	+	New settlement would have at least a 20 minute bus service to Cambridge, equivalent to Cambourne Citi 4. 196 service - less than hourly service. 9 service - hourly service.
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	+	196 service - 36 minutes to Ely. 9 service - 25 minutes to Cambridge.
		Sub-indicator: Distance for cycling to City Centre or Market Town	+	9.90km ACF from the centre of the site to Cambridge Market.
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	---	Insufficient capacity on existing roads. The extent of necessary mitigation measures relating to highway capacity and access arrangements will need to be determined through transport modelling and a detailed transport assessment. They could include dualling of the A10 between Waterbeach and the A14 and upgrading of the A10 and A14 junction. Development proposals of this scale will need to be backed by a Transport Assessment and supporting Travel Plans. Any Transport Assessment will need to be based on analysis undertaken using the Cambridge Sub-Region Model. Detailed mitigation measures and the identification of appropriate financial contributions and obligations under Section 106 will be identified based on the appraisal of the Transport Assessment for each site.
		Will it make the transport network safer for and promote use of non-motorised modes?	+++	Would potentially result in significant improvement to public transport, walking or cycling facilities. Promoter proposes new train station on the Ely to Cambridge railway line. Also propose a rapid bus service alongside the A10 – potential to link into CGB at Science Park. Opportunities to link to existing walking and cycle routes (such as NCN11) into Cambridge and other key sites such as Science Park. Potential requirement to enhance Park and Ride site on A10 at Milton to provide greater capacity. Opportunity to strengthen bus services on corridor between Waterbeach and Cambridge by a rapid service alongside the A10.

Site No. Site 231 (MOD only)

		Will it provide for housing for the ageing population?		
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	No effect on pitch or plot provision.
Inclusive Communities - Redressing inequalities and involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	0	Minor Rural Centre
		Sub-Indicator: Distance to centre	---	1,210km ACF to Chapel Street, Waterbeach, surrounded by a cluster of services and facilities.
		Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	0	No impact on facilities (or satisfactory mitigation proposed).
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will improve relations between people from different backgrounds or social groups?		
		Will it redress inequalities?		
		Will it increase the ability of people to influence decisions, including 'hard to reach' groups?		
Encourage and enable the active involvement of local people in community activities	Will it encourage engagement with community activities?	-	Base closure has curtailed access to MOD facilities.	

Economic Activity		Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	0	Development would have no effect on employment land or premises.
	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	Development would have no effect on vitality or viability of existing centres. The assumption is that the town and local centre proposals will only be of a suitable scale to serve needs of new residents and will not impact on other centres.
		Will it encourage the rural economy and diversification, and support sustainable tourism?		
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it contribute to providing a range of employment opportunities, in accessible locations?	0	41.03 minutes from site to nearest employment area with 2000+ employees. No employment areas with 2000+ employees that can be accessed in less than 30mins - 1.6km walk. (NOTE: Taken from assessment of SHLAA Site 231)
		Will it improve the level of investment in key community services and infrastructure, including broadband?	0	Minor utilities Infrastructure improvements may be required, but constraints can be addressed.
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve access to education and training, and support provision of skilled employees to the economy?	0/-	School capacity may not be sufficient, but significant issues can be adequately addressed

Transport	Reduce the need to travel and promote more sustainable transport choices.	Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	0	Total score of 13.
		Sub-indicator: Distance to bus stop / rail station	+	520m ACF from the centre of the site to the nearest bus stop - Winfold Road (9 service).
		Sub-indicator: Frequency of Public Transport	-	9 service - hourly service.
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	0	9 service - 35 minutes to Ely (Waterbeach, Winfold Road to Ely, Market Street). 9 service - 31 minutes to Cambridge (Waterbeach, Winfold Road to Cambridge, Drummer Street Bus Station).
		Sub-indicator: Distance for cycling to City Centre or Market Town	+	9.22km ACF from the centre of the site to Cambridge Market.
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?		
		Will it make the transport network safer for and promote use of non-motorised modes?		

Site No. Site 233
Address Land west of Station Road (north of Burlington Press), Foxton
Location Foxton
Category of site Group Village
Site area 0.84

Theme	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	0	No previously developed land.
		Will it use land efficiently?		
		Will it protect and enhance the best and most versatile agricultural land?	-	Minor loss of best and most versatile agricultural land (Grades 1 and 2)
		Will it avoid the sterilisation of economic mineral reserves? Will it minimise the degradation/loss of soils due to new development?	0	Site within an area designated in the Minerals and Waste LDF but development would not have a negative impact.
	Minimise waste production and support the reuse and recycling of waste products	Will it encourage reduction in household waste, and increase waste recovery and recycling?		
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	0	Development unlikely to impact on air quality. Site lies in an area where air quality acceptable.
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	0/-	Site adjoins industrial premises and so may be affected by noise from activities and vehicle movements. Will create minor negative impacts to, or as a result of, the development, with minor negative impacts which may be incapable of mitigation.
		Will it minimise, and where possible address, land contamination?	+	Potential for minor benefits through remediation of minor contamination. Adjoins commercial / industrial use, requires assessment.
		Will it protect and where possible enhance the quality of the water environment?	0	Assumptions for a neutral impact are that appropriate standards and pollution control measures will be achieved through the development process, e.g. as part of Sustainable Drainage Systems (Suds).
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiversity?	0	No impact on protected sites and species (or impacts could be mitigated).
	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	0	Assumptions for a neutral impact are that existing features that warrant retention can be retained or appropriate mitigation will be achieved through the development process.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process.

Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	0	Neutral impact (generally compatible, or capable of being made compatible with local landscape character). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process.
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	0	The residential development of this site would replace existing agricultural buildings and hardstandings and would have a neutral impact on the townscape of Foxtan. Neutral impact (generally compatible, or capable of being made compatible with local townscape character). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process.
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Archaeological potential will require further information but the assumption for a neutral impact is that it is likely appropriate mitigation can be achieved through the development process.
	Create places, spaces and buildings that work well, wear well and look good	Will it lead to developments built to a high standard of design and good place making that reflects local character?		
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	0	Standard requirements for renewables would apply.
		Will it promote energy efficiency?		
		Will it minimise contributions to climate change through sustainable construction practices?		
	Reduce vulnerability to future climate change effects	Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	0	Flood Zone 1 and no drainage issues that cannot be appropriately addressed.
		Will it minimise the likely impacts of climate change on the development through appropriate design?		
		Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?		
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?		
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?		

Inclusive Communities - Housing	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	0	Neutral impact (existing features retained or appropriate mitigation).
	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?		
		Will it provide for housing for the ageing population?		
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	No effect on pitch or plot provision.
Inclusive Communities - Redressing inequalities and involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	-	Group Village
		Sub-Indicator: Distance to centre	+++	215m to The White Horse pub, central to village in relation to other services and facilities.
		Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	0	No facilities lost, and no new facilities proposed directly as a result of the development.
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will improve relations between people from different backgrounds or social groups?		
		Will it redress inequalities?		
		Will it increase the ability of people to influence decisions, including 'hard to reach' groups?		
Encourage and enable the active involvement of local people in community activities	Will it encourage engagement with community activities?	0	No facilities lost, and no new facilities proposed directly as a result of the development.	

Economic Activity		Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	0	Development would have no effect on employment land or premises.
	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	Development would have no effect on vitality or viability of existing centres. The indicator is likely to apply particularly to sites which include retail, offices, or leisure uses.
		Will it encourage the rural economy and diversification, and support sustainable tourism?		
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it contribute to providing a range of employment opportunities, in accessible locations?	+	18.82 minutes from site to nearest employment area with 2000+ employees. 6 employment areas with 2000+ employees that can be accessed in less than 30mins - 1.6km walk.
		Will it improve the level of investment in key community services and infrastructure, including broadband?	+++/+	Development can use existing capacity in utilities infrastructure. The sewerage network is approaching capacity and will require investigation and possibly mitigation.
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve access to education and training, and support provision of skilled employees to the economy?	+++	Sufficient surplus capacity available in all catchment schools.

Transport	Reduce the need to travel and promote more sustainable transport choices.	Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	+	Total score of 18.
		Sub-indicator: Distance to bus stop / rail station	+++	340m ACF from the centre of the site to the nearest train station. 154m ACF from the centre of the site to the nearest bus stop.
		Sub-indicator: Frequency of Public Transport	-	Hourly service (Train). Hourly service (Bus).
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	+++	9 minutes from Foxton to Royston (train). 17 minutes from Foxton to Royston (bus).
		Sub-indicator: Distance for cycling to City Centre or Market Town	+	9.72km ACF centre of site to Royston Market
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	0	No capacity constraints identified, safe access can be achieved.
		Will it make the transport network safer for and promote use of non-motorised modes?	+	The Highway Authority will require new development to provide or contribute to the provision of infrastructure to encourage more sustainable transport links both on and off site. Provision or contribution from this site would result in minor improvement to public transport, walking or cycling facilities.

Site No. Site 234
Address Land at the junction of Long Drove and Beach Road, Cottenham
Location Cottenham
Category of site Minor Rural Centre
Site area 1.63

Theme	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	0	No previously developed land.
		Will it use land efficiently?		
		Will it protect and enhance the best and most versatile agricultural land?	0	Development would not affect best and most versatile agricultural land (Grades 1 and 2).
		Will it avoid the sterilisation of economic mineral reserves? Will it minimise the degradation/loss of soils due to new development?	0	Site not within an area designated in the Minerals and Waste LDF
	Minimise waste production and support the reuse and recycling of waste products	Will it encourage reduction in household waste, and increase waste recovery and recycling?		
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	0	Development unlikely to impact on air quality. Site lies in an area where air quality acceptable.
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	-	Development compatible with neighbouring uses. Some minor to moderate additional road traffic noise generation impact on existing residential due to development related car movements but dependent on location of site entrance.
		Will it minimise, and where possible address, land contamination?	0	Development not on land likely to be contaminated.
		Will it protect and where possible enhance the quality of the water environment?	0	Assumptions for a neutral impact are that appropriate standards and pollution control measures will be achieved through the development process, e.g. as part of Sustainable Drainage Systems (Suds).
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiversity?	0	No impact on protected sites and species (or impacts could be mitigated).
	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	0	Assumptions for a neutral impact are that existing features that warrant retention can be retained or appropriate mitigation will be achieved through the development process.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	+	Development would create minor opportunities for new Green Infrastructure as the promoter proposes open space provision..

Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	-	Minor Negative Impact (Development conflicts with landscape character, minor negative impacts incapable of mitigation) - Whilst the site is not in the Green Belt, the land forms an important part of the setting of this part of Cottenham. Previous planning applications have been refused, as development in this location would progressively detract from open and rural appearance and character of area. Also an area identified as a vista that contributes to the character and attractiveness of Cottenham and should be protected.
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	-	Minor Negative Impact (development conflicts with townscape character, minor negative impacts incapable of mitigation) - The VDS recognises the importance of this area on the wider setting of Cottenham, with important views to All Saints Church. Also an area identified as a vista that contributes to the character and attractiveness of Cottenham and should be protected.
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	-	Minor Negative Impact on historic Assets (incapable of satisfactory mitigation) – Some adverse effect on the setting of the Conservation Area due to loss of significant screening to modern development on approach to Conservation Area. Archaeological potential will require further information but the assumption for a neutral impact is that it is likely appropriate mitigation can be achieved through the development process.
	Create places, spaces and buildings that work well, wear well and look good	Will it lead to developments built to a high standard of design and good place making that reflects local character?		
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	0	Standard requirements for renewables would apply.
		Will it promote energy efficiency?		
		Will it minimise contributions to climate change through sustainable construction practices?		
	Reduce vulnerability to future climate change effects	Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	0	Flood Zone 1 and no drainage issues that cannot be appropriately addressed.
		Will it minimise the likely impacts of climate change on the development through appropriate design?		
Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?				
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?		
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?		

Inclusive Communities - Housing	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	+	Development would create minor opportunities for new public open space as the promoter proposes provision of open space as part of the development.
	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?		
		Will it provide for housing for the ageing population?		
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	No effect on pitch or plot provision.
Inclusive Communities - Redressing inequalities and involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	0	Minor Rural Centre
		Sub-Indicator: Distance to centre	0	657m from the centre of the site to a point along the High Street / B1049. Services and facilities run a long way along Cottenham High Street
		Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	0	No facilities lost, and no new facilities proposed directly as a result of the development.
		Will improve relations between people from different backgrounds or social groups?		
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will it redress inequalities?		
		Will it increase the ability of people to influence decisions, including 'hard to reach' groups?		
	Encourage and enable the active involvement of local people in community activities	Will it encourage engagement with community activities?	0	No facilities lost, and no new facilities proposed directly as a result of the development.

Economic Activity		Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	0	Development would have no effect on employment land or premises.
	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	Development would have no effect on vitality or viability of existing centres. The indicator is likely to apply particularly to sites which include retail, offices, or leisure uses.
		Will it encourage the rural economy and diversification, and support sustainable tourism?		
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it contribute to providing a range of employment opportunities, in accessible locations?	+	22.21 minutes from site to nearest employment area with 2000+ employees. Only 1 employment area with 2000+ employees that can be accessed in less than 30mins - 1.6km walk.
		Will it improve the level of investment in key community services and infrastructure, including broadband?	+++ / +	Development can use existing capacity in utilities infrastructure. However, there is insufficient spare mains water capacity within the distribution zone to supply the number of proposed properties which could arise if all the SHLAA sites within the zone were to be developed. The sewerage network is approaching capacity and will require investigation and possibly mitigation.
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve access to education and training, and support provision of skilled employees to the economy?	+	Insufficient spare school capacity but potential for improvement to meet needs. Insufficient secondary school capacity.

Transport	Reduce the need to travel and promote more sustainable transport choices.	Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	0	Total score of 14.
		Sub-indicator: Distance to bus stop / rail station	0	653m ACF from the centre of the site to the nearest bus stop (Citi 8).
		Sub-indicator: Frequency of Public Transport	+	20 Minute Service.
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	0	37 Minutes from Cottenham to Cambridge.
		Sub-indicator: Distance for cycling to City Centre or Market Town	+	8.95km ACF from the centre of the site to Cambridge Market.
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	0	No capacity constraints identified, safe access can be achieved. Assumption is that a fairly large proportion of trips might reasonably be accommodated by the A14, but limitations on the county's network could result in localised diversionary trips on the A14 and M11 and this in turn may limit the capacity of these routes to accommodate new development. Conversely, these settlements are reasonably likely to be able to be served by public transport or non-motorised modes.
		Will it make the transport network safer for and promote use of non-motorised modes?	0	No impact.

Site No. Site 235
Address 36 New Road, Melbourn
Location Melbourn
Category of site Minor Rural Centre
Site area 0.71

Theme	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	0	No previously developed land.
		Will it use land efficiently?		
		Will it protect and enhance the best and most versatile agricultural land?	-	Minor loss of best and most versatile agricultural land (Grades 1 and 2)
		Will it avoid the sterilisation of economic mineral reserves? Will it minimise the degradation/loss of soils due to new development?	0	Site not within an area designated in the Minerals and Waste LDF.
	Minimise waste production and support the reuse and recycling of waste products	Will it encourage reduction in household waste, and increase waste recovery and recycling?		
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	0	Development unlikely to impact on air quality. Site lies in an area where air quality acceptable.
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	0	Development compatible with neighbouring uses.
		Will it minimise, and where possible address, land contamination?	0	Development not on land likely to be contaminated
		Will it protect and where possible enhance the quality of the water environment?	0	Assumptions for a neutral impact are that appropriate standards and pollution control measures will be achieved through the development process, e.g. as part of Sustainable Drainage Systems (Suds).
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiversity?	0	No impact on protected sites and species (or impacts could be mitigated).
	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	0	Assumptions for a neutral impact are that existing features that warrant retention can be retained or appropriate mitigation will be achieved through the development process.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process.

Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	0	Neutral impact (generally compatible, or capable of being made compatible with local landscape character). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process. The site is well screened from the south by hedgerows and woodland strips.
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	0	Neutral impact (generally compatible, or capable of being made compatible with local townscape character). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process.
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Archaeological potential will require further information but the assumption for a neutral impact is that it is likely appropriate mitigation can be achieved through the development process.
	Create places, spaces and buildings that work well, wear well and look good	Will it lead to developments built to a high standard of design and good place making that reflects local character?		
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	0	Standard requirements for renewables would apply.
		Will it promote energy efficiency?		
		Will it minimise contributions to climate change through sustainable construction practices?		
	Reduce vulnerability to future climate change effects	Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	0	Flood Zone 1 and no drainage issues that cannot be appropriately addressed.
		Will it minimise the likely impacts of climate change on the development through appropriate design?		
Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?				
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?		
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?		

Inclusive Communities - Housing	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	0	Neutral impact (existing features retained or appropriate mitigation).
	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?		
		Will it provide for housing for the ageing population?		
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	No effect on pitch or plot provision.
Inclusive Communities - Redressing inequalities and involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	0	Minor Rural Centre
		Sub-Indicator: Distance to centre	-	820m from the centre of the site to a point on High Street, Melbourn which represents the centre of a cluster of services and facilities
		Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	0	No facilities lost, and no new facilities proposed directly as a result of the development.
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will improve relations between people from different backgrounds or social groups?		
		Will it redress inequalities?		
		Will it increase the ability of people to influence decisions, including 'hard to reach' groups?		
	Encourage and enable the active involvement of local people in community activities	Will it encourage engagement with community activities?	0	No facilities lost, and no new facilities proposed directly as a result of the development.

Economic Activity		Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	0	Development would have no effect on employment land or premises.
	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	Development would have no effect on vitality or viability of existing centres. The indicator is likely to apply particularly to sites which include retail, offices, or leisure uses.
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it encourage the rural economy and diversification, and support sustainable tourism?		
		Will it contribute to providing a range of employment opportunities, in accessible locations?	+++	11.06 minutes from site to nearest employment area with 2000+ employees. Only 1 employment area with 2000+ employees that can be accessed in less than 30mins - 1.6km walk.
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve the level of investment in key community services and infrastructure, including broadband?	+++/+	Development can use existing capacity in utilities infrastructure. The sewerage network is approaching capacity and will require investigation and possibly mitigation.
		Will it improve access to education and training, and support provision of skilled employees to the economy?	+++	Sufficient surplus capacity available in all catchment schools.

Transport	Reduce the need to travel and promote more sustainable transport choices.	Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	+	Total score of 18.
		Sub-indicator: Distance to bus stop / rail station	+	577m ACF from centre of the site to nearest bus stop to best service (26 service).
		Sub-indicator: Frequency of Public Transport	-	Hourly service.
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	+++	32 Minutes from Melbourn to Cambridge. 9 Minutes from Melbourn to Royston.
		Sub-indicator: Distance for cycling to City Centre or Market Town	+++	4.61km ACF centre of site to Saffron Walden Market.
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	0	No capacity constraints identified, safe access can be achieved.
		Will it make the transport network safer for and promote use of non-motorised modes?	+	The Highway Authority will require new development to provide or contribute to the provision of infrastructure to encourage more sustainable transport links both on and off site. Provision or contribution from this site would result in minor improvement to public transport, walking or cycling facilities.

Site No. Site 236
Address Land at Linton Road, Balsham
Location Balsham
Category of site Group Village
Site area 1.61

Theme	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	0	No previously developed land.
		Will it use land efficiently?		
		Will it protect and enhance the best and most versatile agricultural land?	-	Minor loss of best and most versatile agricultural land (Grades 1 and 2) - small site but all Grade 2.
		Will it avoid the sterilisation of economic mineral reserves? Will it minimise the degradation/loss of soils due to new development?	0	Site not within an area designated in the Minerals and Waste LDF.
	Minimise waste production and support the reuse and recycling of waste products	Will it encourage reduction in household waste, and increase waste recovery and recycling?		
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	0	Development unlikely to impact on air quality. Site lies in an area where air quality acceptable.
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	-	Development compatible with neighbouring uses. Some minor to moderate additional road traffic noise generation impact on existing residential due to development related car movements but dependent on location of site entrance
		Will it minimise, and where possible address, land contamination?	0	Development not on land likely to be contaminated.
		Will it protect and where possible enhance the quality of the water environment?	0	Development unlikely to affect water quality. The site within Groundwater Source Protection Zone 3 which does not rule out development but may influence land use or require pollution control measures. Assumptions for a neutral impact are that appropriate standards and pollution control measures will achieved through the development process and will mitigate any impact on groundwater,
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiversity?	0	No impact on protected sites and species (or impacts could be mitigated).
	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	0	Assumptions for a neutral impact are that existing features that warrant retention can be retained or appropriate mitigation will be achieved through the development process.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process.

Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	---	Significant Negative Impact (Development conflicts with landscape character, with significant negative impacts incapable of mitigation) - - site is rural in character and part of the undulating open countryside on this western side of Balsham.
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	---	Significant Negative Impact (Development conflicts with townscape character, with significant negative impacts incapable of mitigation) - Development of the site would have a significant adverse effect on the townscape of Balsham because it would introduce a non-linear form of built development into the village
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	---	Significant Negative Impact on historic Assets (incapable of satisfactory mitigation) – site would impact setting of Listed buildings in Fox Rd and High St. loss of rural backdrop to setting of listed buildings. Archaeological potential will require further information but the assumption for a neutral impact is that it is likely appropriate mitigation can be achieved through the development process.
	Create places, spaces and buildings that work well, wear well and look good	Will it lead to developments built to a high standard of design and good place making that reflects local character?		
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	0	Standard requirements for renewables would apply.
		Will it promote energy efficiency?		
		Will it minimise contributions to climate change through sustainable construction practices?		
	Reduce vulnerability to future climate change effects	Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	0	Flood Zone 1 and no drainage issues that cannot be appropriately addressed.
		Will it minimise the likely impacts of climate change on the development through appropriate design?		
		Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?		
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?		
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?		

Inclusive Communities - Housing	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	0	Neutral impact (existing features retained or appropriate mitigation).
	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?		
		Will it provide for housing for the ageing population?		
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	No effect on pitch or plot provision.
Inclusive Communities - Redressing Inequalities and involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	-	Group Village
		Sub-Indicator: Distance to centre	-	879m ACF to the Black Bull pub, which is central to the village, surrounded by other services and facilities.
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	0	No facilities lost, and no new facilities proposed directly as a result of the development.
		Will improve relations between people from different backgrounds or social groups?		
	Encourage and enable the active involvement of local people in community activities	Will it redress inequalities?		
		Will it increase the ability of people to influence decisions, including 'hard to reach' groups?		
	Will it encourage engagement with community activities?	0	No facilities lost, and no new facilities proposed directly as a result of the development.	

Economic Activity		Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	0	Development would have no effect on employment land or premises
	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	Development would have no effect on vitality or viability of existing centres. The indicator is likely to apply particularly to sites which include retail, offices, or leisure uses.
		Will it encourage the rural economy and diversification, and support sustainable tourism?		
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it contribute to providing a range of employment opportunities, in accessible locations?	0	37.32 minutes from site to nearest employment area with 2000+ employees. No employment areas with 2000+ employees can be accessed in less than 30mins - 1.6km walk.
		Will it improve the level of investment in key community services and infrastructure, including broadband?	+	Minor Utilities Infrastructure improvements required, but constraints can be addressed. There is insufficient spare mains water capacity within the distribution zone to supply the number of proposed properties which could arise if all the SHLAA sites within the zone were to be developed. The sewerage network is approaching capacity and will require mitigation.
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve access to education and training, and support provision of skilled employees to the economy?	-	School capacity not sufficient, but significant issues can be adequately addressed

Transport		Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	0	Total score of 13.
	Reduce the need to travel and promote more sustainable transport choices.	Sub-indicator: Distance to bus stop / rail station	+++	308m ACF from the centre of the site to the nearest bus stop.
		Sub-indicator: Frequency of Public Transport	---	Less than hourly service.
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	+	20 Minutes from Balsham to Haverhill
		Sub-indicator: Distance for cycling to City Centre or Market Town	0	10.67km ACF from the centre of the site to Haverhill Market.
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	0	No capacity constraints identified, safe access can be achieved.
		Will it make the transport network safer for and promote use of non-motorised modes?	0	No impact.

Site No. Site 237
Address Land east of Hay Street, Steeple Morden
Location Steeple Morden
Category of site Group Village
Site area 0.33

Theme	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	0	No previously developed land.
		Will it use land efficiently?		
		Will it protect and enhance the best and most versatile agricultural land?	-	Minor loss of best and most versatile agricultural land (Grades 1 and 2) - small site but all Grade 2
	Minimise waste production and support the reuse and recycling of waste products	Will it avoid the sterilisation of economic mineral reserves? Will it minimise the degradation/loss of soils due to new development?	0	Site not within an area designated in the Minerals and Waste LDF.
Will it encourage reduction in household waste, and increase waste recovery and recycling?				
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	0	Development unlikely to impact on air quality. Site lies in an area where air quality acceptable.
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	0	Development compatible with neighbouring uses.
		Will it minimise, and where possible address, land contamination?	0	Development not on land likely to be contaminated
		Will it protect and where possible enhance the quality of the water environment?	0	Development unlikely to affect water quality. Assumptions for a neutral impact are that appropriate standards and pollution control measures will be achieved through the development process, e.g. as part of Sustainable Drainage Systems (Suds).
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiversity?	0	No impact on protected sites and species (or impacts could be mitigated).
	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	0	Assumptions for a neutral impact are that existing features that warrant retention can be retained or appropriate mitigation will be achieved through the development process.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process.

Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	---	Significant Negative Impact (Development conflicts with landscape character, with significant negative impacts incapable of mitigation) - site bringing the countryside into the village. Development of the site would result in the loss of this rural frontage to Hay Street.
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	-	Minor Negative Impact (development conflicts with townscape character, minor negative impacts incapable of mitigation) - incompatible with linear street pattern characteristic of this part of village
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Some impact on setting of listed buildings adjoining site. Archaeological potential will require further information but the assumption for a neutral impact is that it is likely appropriate mitigation can be achieved through the development process.
		Create places, spaces and buildings that work well, wear well and look good		
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	0	Standard requirements for renewables would apply.
		Will it promote energy efficiency?		
		Will it minimise contributions to climate change through sustainable construction practices?		
	Reduce vulnerability to future climate change effects	Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	0	Flood Zone 1 and no drainage issues that cannot be appropriately addressed.
		Will it minimise the likely impacts of climate change on the development through appropriate design?		
		Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?		
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?		
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?		

Inclusive Communities - Housing	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	0	Neutral impact (existing features retained or appropriate mitigation).
	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?		
		Will it provide for housing for the ageing population?		
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	No effect on pitch or plot provision.
Inclusive Communities - Redressing inequalities and involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	-	Group Village
		Sub-Indicator: Distance to centre	0	661m from the centre of the site to Cheyney Street, opposite the school, a central point in the village surrounded by services and facilities
		Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	0	No facilities lost, and no new facilities proposed directly as a result of the development.
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will improve relations between people from different backgrounds or social groups?		
		Will it redress inequalities?		
		Will it increase the ability of people to influence decisions, including 'hard to reach' groups?		
	Encourage and enable the active involvement of local people in community activities	Will it encourage engagement with community activities?	0	No facilities lost, and no new facilities proposed directly as a result of the development.

Economic Activity		Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	0	Development would have no effect on employment land or premises.
	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	Development would have no effect on vitality or viability of existing centres. The indicator is likely to apply particularly to sites which include retail, offices, or leisure uses.
		Will it encourage the rural economy and diversification, and support sustainable tourism?		
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it contribute to providing a range of employment opportunities, in accessible locations?	+	28.96 minutes from site to nearest employment area with 2000+ employees. Only 1 employment area with 2000+ employees that can be accessed in less than 30mins - 1.6km walk.
		Will it improve the level of investment in key community services and infrastructure, including broadband?	+	Minor Utilities Infrastructure improvements required, but constraints can be addressed. There is insufficient spare mains water capacity within the distribution zone to supply the number of proposed properties which could arise if all the SHLAA sites within the zone were to be developed. The WWTW is close to capacity and the sewerage network is approaching capacity and both will require mitigation.
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve access to education and training, and support provision of skilled employees to the economy?	-	School capacity not sufficient, but significant issues can be adequately addressed

Transport		Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	0	Total score of 13.
	Reduce the need to travel and promote more sustainable transport choices.	Sub-indicator: Distance to bus stop / rail station	+++	67m ACF from the centre of the site to the nearest bus stop.
		Sub-indicator: Frequency of Public Transport	---	Less than hourly service.
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	0	32 minutes from Steeple Morden to Royston.
		Sub-indicator: Distance for cycling to City Centre or Market Town	+	7.50km ACF from the centre of the site to Royston Market.
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	0	No capacity constraints identified, safe access can be achieved.
		Will it make the transport network safer for and promote use of non-motorised modes?	0	No impact

Site No. Site 238
Address Bourn Airfield, Bourn
Location countryside
Category of site New Settlement
Site area 141.7

Theme	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	+	The site includes the runways and some aircraft hangers, industrial buildings and outside storage areas. The rest of the site is in agricultural use and therefore not pdl. Approximately one third of site pdl.
		Will it use land efficiently?		
		Will it protect and enhance the best and most versatile agricultural land?	---	Significant loss (20 hectares or more) of best and most versatile agricultural land (Grades 1 and 2) - Majority of very large site is Grade 2.
		Will it avoid the sterilisation of economic mineral reserves? Will it minimise the degradation/loss of soils due to new development?	0	Site not within an area designated in the Minerals and Waste LDF.
	Minimise waste production and support the reuse and recycling of waste products	Will it encourage reduction in household waste, and increase waste recovery and recycling?		
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	-	Development could impact on air quality, with minor negative impacts incapable of mitigation. Despite this proposal not being adjacent to an Air Quality Management Area, it is of a significant size and therefore, there is a potential for an increase in traffic and static emissions that could affect local air quality. More information is required for this location, particularly details for air quality assessment and a low emission strategy.
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	---/-	Development compatible with some neighbouring uses. Concerns at noise from adjoining industrial units to the east of the site which impact on nearby residential areas. Need to create buffer zone to mitigate noise. Also concerns at impact of noise from A428 which adjoins northern boundary of site. Environmental Health objecting to site - noise and odour constraints must be further investigated. Some minor to moderate additional road traffic noise generation impact on existing residential due to development related car movements could be mitigated.
		Will it minimise, and where possible address, land contamination?	+	This site is previously military land/airfield and may have contaminated land. It will require investigation. Potential for minor benefits through remediation of minor contamination.
		Will it protect and where possible enhance the quality of the water environment?	0	Assumptions for a neutral impact are that appropriate standards and pollution control measures will be achieved through the development process, e.g. as part of Sustainable Drainage Systems (Suds).
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiversity?	0	No impact on protected sites and species (or impacts could be mitigated).
	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	0	Assumptions for a neutral impact are that existing features that warrant retention can be retained or appropriate mitigation will be achieved through the development process. Greatest impact likely to be as a result of losing grassland habitats currently found within the airfield strips. Great crested newts are known to be in the vicinity and may also be adversely affected.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process.

Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	0	Neutral impact (generally compatible, or capable of being made compatible with local landscape character). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process.
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	0	Neutral impact (generally compatible, or capable of being made compatible with local townscape character). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process.
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	0/-	Neutral impact (existing features retained, or appropriate mitigation possible). Setting of listed buildings to west and south west of site would be adversely affected by development. Archaeological potential will require further information but the assumption for a neutral impact is that it is likely appropriate mitigation can be achieved through the development process.
	Create places, spaces and buildings that work well, wear well and look good	Will it lead to developments built to a high standard of design and good place making that reflects local character?		
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	+ /+++	Development would create minor additional opportunities for renewable energy. A new settlement of this scale would be expected to include many additional renewable energy options
		Will it promote energy efficiency?		
		Will it minimise contributions to climate change through sustainable construction practices?		
	Reduce vulnerability to future climate change effects	Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	0	Flood Zone 1 and no drainage issues that cannot be appropriately addressed.
		Will it minimise the likely impacts of climate change on the development through appropriate design?		
		Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?		
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?		
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?		
	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	+	Development would create minor opportunities for new public open space

Inclusive Communities - Housing	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?		
		Will it provide for housing for the ageing population?		
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	No effect on pitch or plot provision.
Inclusive Communities - Redressing inequalities and involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	+	Expansion to Cambourne therefore would expect it to provide additional facilities and services for existing and new communities.
		Sub-Indicator: Distance to centre	0	Centre point of site beyond 1000m of nearest existing centre Majority of site would be within 800m of any new local centre developed as part of site.
		Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	+	New facilities or improved existing facilities are proposed of minor benefit. Promoter has indicated that the settlement will be a mixed use sustainable community.
		Will improve relations between people from different backgrounds or social groups?		
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will it redress inequalities?		
		Will it increase the ability of people to influence decisions, including 'hard to reach' groups?		
	Encourage and enable the active involvement of local people in community activities	Will it encourage engagement with community activities?	+	New local community / village hall or improved existing facility is proposed of minor benefit (and is viable and sustainable). The promoter has indicated that the new settlement will be self sufficient and sustainable.

Economic Activity		Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	+	Development would support minor additional employment opportunities. It is proposed that the new settlement be a mixed use community therefore this would mitigate the loss of employment as a result of developing the airfield site.
	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	Development would have no effect on vitality or viability of existing centres. The new settlement is proposed as being a self sufficient sustainable community.
		Will it encourage the rural economy and diversification, and support sustainable tourism?		
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it contribute to providing a range of employment opportunities, in accessible locations?	+	32.76 minutes from site to nearest employment area with 2000+ employees. No employment areas with 2000+ employees that can be accessed in less than 30mins - 1.6km walk. Proposed - Site would develop business / employment as part of development. Therefore it is assumed that employments areas of 2000+ will be a accessed between 15 and 30 minutes (could be less than 15 minutes +++ towards end of development).
		Will it improve the level of investment in key community services and infrastructure, including broadband?	-	Major utilities Infrastructure improvements required, but constraints can be addressed. There is insufficient spare mains water capacity within the distribution zone to supply the number of proposed properties which could arise if all the SHLAA sites within the zone were to be developed. The sewage network is at capacity.
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve access to education and training, and support provision of skilled employees to the economy?	-	School capacity not sufficient, but significant issues be adequately addressed

Transport	Reduce the need to travel and promote more sustainable transport choices.	Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	0	Total score of 13.
		Sub-indicator: Distance to bus stop / rail station	0	New settlement would require new bus stops which would mostly fall within 800m of the site. 820m ACF from the centre of the site to nearest bus stop (Citi 4).
		Sub-indicator: Frequency of Public Transport	+	New settlement would have at least a 20 minute bus service to Cambridge, equivalent to Cambourne Citi 4. 20 minute service.
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	0	~33 minutes from bus stop to Cambridge.
		Sub-indicator: Distance for cycling to City Centre or Market Town	0	10.81km ACF from the centre of the site to Cambridge Market.
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	0/-	No capacity constraints identified, safe access can be achieved. The promoter has stated that the transport strategy will include innovatory public transport proposals. Highway Authority has highlighted A1303 Madingley Road corridor into Cambridge has capacity problems (especially at M11 Junction 13). Also Park and Ride at Madingley Road capacity may need upgrading.
		Will it make the transport network safer for and promote use of non-motorised modes?	+	The Highway Authority will require new development to provide or contribute to the provision of infrastructure to encourage more sustainable transport links both on and off site. Provision or contribution from this site would result in minor improvement to public transport, walking or cycling facilities. .

Site No. Site 239
Address Land west of Lower Cambourne and the Cambourne Business Park, bounded to the north by th
Location Cambourne
Category of site Rural Centre
Site area 150.88

Theme	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	0	No previously developed land.
		Will it use land efficiently?		
		Will it protect and enhance the best and most versatile agricultural land?	---	Significant loss (20 hectares or more) of best and most versatile agricultural land (Grades 1 and 2) - the whole site is Grade 2 (over 150 ha).
		Will it avoid the sterilisation of economic mineral reserves? Will it minimise the degradation/loss of soils due to new development?	0	Site not within an area designated in the Minerals and Waste LDF.
	Minimise waste production and support the reuse and recycling of waste products	Will it encourage reduction in household waste, and increase waste recovery and recycling?		
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	0	Development unlikely to impact on air quality. Site lies in an area where air quality acceptable.
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	0/-	Development compatible with neighbouring uses. Traffic noise from the A428 and A1198 should be capable of mitigation. Some possible issues with noise from adjoining commercial / industrial site that may require offsite mitigation.
	Will it minimise, and where possible address, land contamination?	0	Development not on land likely to be contaminated.	
	Will it protect and where possible enhance the quality of the water environment?	0	Development unlikely to effect water quality. Assumptions for a neutral impact are that appropriate standards and pollution control measures will be achieved through the development process, e.g. as part of Sustainable Drainage Systems (SuDS).	
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiversity?	0	No impact on protected sites and species (or impacts could be mitigated).
	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	+/0	Minor positive impact as there are some opportunities for enhancement through the planting of additional copses, extending hedgerows into the site, and the creation of new ponds.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	+ /+++	Development would create minor opportunities for new Green Infrastructure. New landscaping associated with development of this site will create access to areas of open space within and on the edge of the development including designed greenways and connections to the existing green spaces in Cambourne.

Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	0/-	Minor negative impact (development conflicts with landscape character, minor negative impacts incapable of mitigation) - development of this site would be visible in many long distant views, would reduce the long countryside views into shorter ones, and would bring the development at Cambourne slightly closer to nearby villages, however it would be possible to develop this site without
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	0	Neutral impact (generally compatible, or capable of being made compatible with local townscape character). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process.
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Archaeological potential will require further information but the assumption for a neutral impact is that it is likely appropriate mitigation can be achieved through the development process.
	Create places, spaces and buildings that work well, wear well and look good	Will it lead to developments built to a high standard of design and good place making that reflects local character?		
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	0/+	Development could create minor additional opportunities for renewable energy.
		Will it promote energy efficiency?		
		Will it minimise contributions to climate change through sustainable construction practices?		
	Reduce vulnerability to future climate change effects	Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	0	Flood Zone 1 and no drainage issues that cannot be appropriately addressed.
		Will it minimise the likely impacts of climate change on the development through appropriate design?		
Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?				
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?		
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?		

Inclusive Communities - Housing	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	+/+	Development would create opportunities for new public open space.
	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?		
		Will it provide for housing for the ageing population?		
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	No effect on pitch or plot provision.
Inclusive Communities - Redressing inequalities and involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	+	Rural Centre.
		Sub-Indicator: Distance to centre	---	1,533m from the centre of Cambourne (Broad Street), surrounded by a range of services and facilities. Majority of site would be within 800m of any new local centre developed as part of site.
		Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	+/+	New local facilities or improved existing facilities are proposed of significant benefit. The development proposes employment, health and community uses, and a local centre.
		Will improve relations between people from different backgrounds or social groups?		
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will it redress inequalities?		
		Will it increase the ability of people to influence decisions, including 'hard to reach' groups?		
Encourage and enable the active involvement of local people in community activities	Will it encourage engagement with community activities?	+/+	New local community facilities or improved existing facility is proposed of minor benefit (and is viable and sustainable).	

Economic Activity	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	+ /+++	Development would support minor additional employment opportunities.
		Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0/+	The assumption is that any additional retail proposed will only be of a suitable scale to serve the needs of new residents and will not impact on other centres. Development could support the vitality or viability of the existing Cambourne centre.
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it encourage the rural economy and diversification, and support sustainable tourism?		
		Will it contribute to providing a range of employment opportunities, in accessible locations?	0	38.79 minutes from site to nearest employment area with 2000+ employees. No employment areas with 2000+ employees can be accessed in less than 30mins - 1.6km walk.
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve the level of investment in key community services and infrastructure, including broadband?	-	Major utilities infrastructure improvements required, but constraints can be addressed. Development of this site is likely to require a significant amount of new electricity network. There is no spare mains water capacity within the distribution zone. System reinforcement of the gas network is likely to be necessary to accommodate the development of this site. Significant infrastructure upgrades to the sewerage network will be required to accommodate this proposal
		Will it improve access to education and training, and support provision of skilled employees to the economy?	-	School capacity not sufficient, but significant issues can be adequately addressed.

Transport	Reduce the need to travel and promote more sustainable transport choices.	Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	0	Total score of 13
		Sub-indicator: Distance to bus stop / rail station	0	880m ACF from the centre of the site to the nearest bus stop.
		Sub-indicator: Frequency of Public Transport	+	20 minute service.
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	0	35 minutes from bus stop to the centre of Cambridge.
		Sub-indicator: Distance for cycling to City Centre or Market Town	0	11.23km ACF from the centre of the site to Cambridge Market.
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	0/-	Minor negative effects incapable of mitigation. Access constraints - the Highways Authority would not permit any accesses onto the A428 or Caxton Gibbet roundabout, and the roundabout to the south of the site on the A1198 would need to be modified. The promoter has indicated that vehicular access to the site would be from the A1198 both along the western and southern boundary of the site, and from Sheepfold Lane. Development would have a direct impact on A428 with potential capacity issues at the Cambourne Junction and on the corridor between Cambridge and St. Neots / Bedford, particularly junctions at either end of this section.
		Will it make the transport network safer for and promote use of non-motorised modes?	+	The Highway Authority will require new development to provide or contribute to the provision of infrastructure to encourage more sustainable transport links both on and off site. Provision or contribution from this site would result in minor improvement to public transport, walking or cycling facilities.

Site No. Site 240
Address Land at Littleton House, High Street, Girton
Location Girton
Category of site Group Village
Site area 2.58

Theme	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	0	No previously developed land.
		Will it use land efficiently?		
		Will it protect and enhance the best and most versatile agricultural land?	0	Development would not affect best and most versatile agricultural land (Grades 1 and 2).
		Will it avoid the sterilisation of economic mineral reserves? Will it minimise the degradation/loss of soils due to new development?	0	Site not within an area designated in the Minerals and Waste LDF.
	Minimise waste production and support the reuse and recycling of waste products	Will it encourage reduction in household waste, and increase waste recovery and recycling?		
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	0	Development unlikely to impact on air quality. Site lies in an area where air quality acceptable.
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	0	Development compatible with neighbouring uses. Some potential for traffic noise from A14, but should be possible to mitigate.
		Will it minimise, and where possible address, land contamination?	+	Potential for minor benefits through remediation of minor contamination - Sewage filter beds on site
		Will it protect and where possible enhance the quality of the water environment?	0	Assumptions for a neutral impact are that appropriate standards and pollution control measures will be achieved through the development process, e.g. as part of Sustainable Drainage Systems (Suds).
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiversity?	0	No impact on protected sites and species (or impacts could be mitigated). There are a protected Yew and Plane tree in the grounds of 65 High Street, adjacent to the proposed access to the site.
	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	0	Assumptions for a neutral impact are that existing features that warrant retention can be retained or appropriate mitigation will be achieved through the development process.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process.

Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	---	Significant Negative Impact (Development conflicts with landscape character, with significant negative impacts incapable of mitigation) - The site is characterised as being within an area of enclosed farmland with views of the village set within well treed, rising ground creating a visibly interesting edge. Washpit Brook, together with substantial woodland and enclosed fields form an enclosed edge. Part of the setting of the historic core, it provides a countryside break in the street scene emphasising rural character, which should be protected.
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	---	Significant Negative Impact (Development conflicts with townscape character, with significant negative impacts incapable of mitigation) - The site can be seen from High Street, where it forms a particularly attractive incursion of countryside into the village. Removal of the hedgerow to accommodate a widened formal access would have a detrimental impact on the rural character of this historic part of the village and the setting of the adjacent Listed Building. Part of the setting of the historic core, it provides a countryside break in the street scene emphasising rural character, which should be protected.
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	---	Significant Negative Impact on historic Assets (incapable of satisfactory mitigation) - Adverse impact on setting of the adjacent Grade II Listed Building and setting of historic core of village, which it would not be possible to mitigate. Archaeological potential will require further information but it is likely appropriate mitigation can be achieved through the development process
	Create places, spaces and buildings that work well, wear well and look good	Will it lead to developments built to a high standard of design and good place making that reflects local character?		
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	0	Standard requirements for renewables would apply.
		Will it promote energy efficiency?		
	Reduce vulnerability to future climate change effects	Will it minimise contributions to climate change through sustainable construction practices?		
		Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	0	Flood Zone 1 and no drainage issues that cannot be appropriately addressed. A part of the western edge of the site is within Flood Zones 2 and 3.
		Will it minimise the likely impacts of climate change on the development through appropriate design?		
	Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?			
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?		
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?		

Inclusive Communities - Housing	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	0	Neutral impact (existing features retained or appropriate mitigation).
	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?		
		Will it provide for housing for the ageing population?		
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	No effect on pitch or plot provision.
Inclusive Communities - Redressing inequalities and involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	-	Group Village
		Sub-Indicator: Distance to centre	+++	318m from the centre of the site to the village hall (Cotton Hall), central to the other services and facilities within the village.
		Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	0	No facilities lost, and no new facilities proposed directly as a result of the development.
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will improve relations between people from different backgrounds or social groups?		
		Will it redress inequalities?		
		Will it increase the ability of people to influence decisions, including 'hard to reach' groups?		
	Encourage and enable the active involvement of local people in community activities	Will it encourage engagement with community activities?	0	No facilities lost, and no new facilities proposed directly as a result of the development.

Economic Activity		Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	0	Development would have no effect on employment land or premises.
	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	Development would have no effect on vitality or viability of existing centres. The indicator is likely to apply particularly to sites which include retail, offices, or leisure uses.
		Will it encourage the rural economy and diversification, and support sustainable tourism?		
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it contribute to providing a range of employment opportunities, in accessible locations?	+	16.49 minutes from site to nearest employment area with 2000+ employees. 7 employment areas with 2000+ employees that can be accessed in less than 30mins - 1.6km walk.
		Will it improve the level of investment in key community services and infrastructure, including broadband?	+	Minor Utilities Infrastructure improvements required, but constraints can be addressed. There is insufficient spare mains water capacity within the distribution zone to supply the number of proposed properties which could arise if all the SHLAA sites within the zone were to be developed. The WWTW is operating close to capacity and the sewerage network is at capacity and both will require mitigation.
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve access to education and training, and support provision of skilled employees to the economy?	-	School capacity not sufficient, but significant issues can be adequately addressed

Transport	Reduce the need to travel and promote more sustainable transport choices.	Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	+++	Total score of 22.
		Sub-indicator: Distance to bus stop / rail station	+++	230m ACF from the centre of the site to the nearest bus stop.
		Sub-indicator: Frequency of Public Transport	+	20 minute service.
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	+++	16 minutes from Girton to Cambridge.
		Sub-indicator: Distance for cycling to City Centre or Market Town	+++	4.85km ACF from the centre of the site to Cambridge Market.
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	-	Minor negative effects incapable of mitigation. Access constraints - The Highway Authority has concerns in relationship to the provision of suitable inter vehicle visibility splay for this site. The access link to the public highway is unsuitable to serve the number of units that are being proposed.
		Will it make the transport network safer for and promote use of non-motorised modes?	0	No impact.

Site No. Site 241
Address The Woodyard, Cottenham
Location Cottenham
Category of site Minor Rural Centre
Site area 1.22

Theme	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	0	No previously developed land.
		Will it use land efficiently?		
		Will it protect and enhance the best and most versatile agricultural land?	-	Minor loss of best and most versatile agricultural land (Grades 1 and 2) - small site but all Grade 2.
		Will it avoid the sterilisation of economic mineral reserves? Will it minimise the degradation/loss of soils due to new development?	0	Site not within an area designated in the Minerals and Waste LDF
	Minimise waste production and support the reuse and recycling of waste products	Will it encourage reduction in household waste, and increase waste recovery and recycling?		
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	0	Development unlikely to impact on air quality. Site lies in an area where air quality acceptable.
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	-	Development compatible with neighbouring uses. Some minor to moderate additional road traffic noise generation impact on existing residential due to development related car movements but dependent on location of site entrance. A depot located immediately to the south but use unknown and may require further assessment.
		Will it minimise, and where possible address, land contamination?	0	Development not on land likely to be contaminated.
		Will it protect and where possible enhance the quality of the water environment?	0	Assumptions for a neutral impact are that appropriate standards and pollution control measures will be achieved through the development process, e.g. as part of Sustainable Drainage Systems (Suds).
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiversity?	0	No impact on protected sites and species (or impacts could be mitigated).
	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	0	Assumptions for a neutral impact are that existing features that warrant retention can be retained or appropriate mitigation will be achieved through the development process.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	+	Development would create minor opportunities for new Green Infrastructure as the promoter proposes open space provision..

Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	---	Significant Negative Impact (Development conflicts with landscape character, with significant negative impacts incapable of mitigation) - The land forms an important part of the setting of this part of historically sensitive part of Cottenham. Previous planning applications have been refused as development in this location would constitute a sporadic form of development, detached from the village, and would represent an intrusion into open countryside.
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	---	Significant Negative Impact (Development conflicts with townscape character, with significant negative impacts incapable of mitigation) - The land forms an important part of the setting of this part of historically sensitive part of Cottenham. The VDS recognises the importance of this area on the wider setting of Cottenham, with important views to All Saints Church. Also an area identified as a vista that contributes to the character and attractiveness of Cottenham and should be protected.
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	---	Significant Negative Impact on historic Assets (incapable of satisfactory mitigation) - The land forms an important part of the setting of this part of historically sensitive part of Cottenham, including the Grade I Listed Church of All Saints and other Grade II Listed Buildings along High Street . The VDS recognises the importance of this area on the wider setting of Cottenham, with important views to the Church. Also an area identified as a vista that contributes to the character and attractiveness of Cottenham and should be protected. Archaeological potential will require further information but the assumption for a neutral impact is that it is likely appropriate mitigation can be achieved through the development process.
	Create places, spaces and buildings that work well, wear well and look good	Will it lead to developments built to a high standard of design and good place making that reflects local character?		
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	0	Standard requirements for renewables would apply.
		Will it promote energy efficiency?		
		Will it minimise contributions to climate change through sustainable construction practices?		
	Reduce vulnerability to future climate change effects	Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	0	Flood Zone 1 and no drainage issues that cannot be appropriately addressed.
		Will it minimise the likely impacts of climate change on the development through appropriate design?		
Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?				
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?		
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?		

Inclusive Communities - Housing	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	+	Development would create minor opportunities for new public open space as the promoter proposes provision of open space as part of the development.
	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?		
		Will it provide for housing for the ageing population?		
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	No effect on pitch or plot provision.
Inclusive Communities - Redressing inequalities and involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	0	Minor Rural Centre
		Sub-Indicator: Distance to centre	---	1,176m from the centre of the site to a point along the High Street / B1049. Services and facilities run a long way along Cottenham High Street
	Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	0	No facilities lost, and no new facilities proposed directly as a result of the development.	
		Will improve relations between people from different backgrounds or social groups?		
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will it redress inequalities?		
		Will it increase the ability of people to influence decisions, including 'hard to reach' groups?		
	Encourage and enable the active involvement of local people in community activities	Will it encourage engagement with community activities?	0	No facilities lost, and no new facilities proposed directly as a result of the development.

Economic Activity		Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	0	Development would have no effect on employment land or premises.
	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	Development would have no effect on vitality or viability of existing centres. The indicator is likely to apply particularly to sites which include retail, offices, or leisure uses.
		Will it encourage the rural economy and diversification, and support sustainable tourism?		
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it contribute to providing a range of employment opportunities, in accessible locations?	+	24.20 minutes from site to nearest employment area with 2000+ employees. Only 1 employment area with 2000+ employees that can be accessed in less than 30mins - 1.6km walk.
		Will it improve the level of investment in key community services and infrastructure, including broadband?	+++ / +	Development can use existing capacity in utilities infrastructure. However, there is insufficient spare mains water capacity within the distribution zone to supply the number of proposed properties which could arise if all the SHLAA sites within the zone were to be developed. The sewerage network is approaching capacity and will require investigation and possibly mitigation.
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve access to education and training, and support provision of skilled employees to the economy?	+	Insufficient spare school capacity but potential for improvement to meet needs. Insufficient secondary school capacity.

Transport	Reduce the need to travel and promote more sustainable transport choices.	Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	0	Total score of 10.
		Sub-indicator: Distance to bus stop / rail station	---	310m ACF from the centre of the site to the nearest bus stop (X8). 1,142m ACF from the centre of the site to the nearest bus stop (Citi 8).
		Sub-indicator: Frequency of Public Transport	+	X8 - less than hourly service. Citi 8 - 20 Minute Service.
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	0	X8 - 34 Minutes from Cottenham to Cambridge. Citi 8 - 37 Minutes from Cottenham to Cambridge.
		Sub-indicator: Distance for cycling to City Centre or Market Town	0	10.13km ACF from the centre of the site to Cambridge Market.
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	--- / -	Insufficient capacity or access constraints that cannot be adequately mitigated. The access link to the public highway is unsuitable to serve the number of units that are being proposed. However, the Highway Authority believes that the access to site 269 (a junction located on The Woodyard) could also serve site number 241. Assumption is that a fairly large proportion of trips might reasonably be accommodated by the A14, but limitations on the county's network could result in localised diversionary trips on the A14 and M11 and this in turn may limit the capacity of these routes to accommodate new development. Conversely, these settlements are reasonably likely to be able to be served by public transport or non-motorised modes.
		Will it make the transport network safer for and promote use of non-motorised modes?	0	No impact.

Site No. Site 242
Address Land north west of B1050, Station Road, Longstanton (Northstowe Reserve)
Location Northstowe
Category of site Northstowe
Site area 56.08

Theme	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	0	This large site includes a small established business and yard to the north.
		Will it use land efficiently?		
		Will it protect and enhance the best and most versatile agricultural land?	---	Significant loss (20 hectares or more) of best and most versatile agricultural land (Grades 1 and 2) - approximately 2/3 of the site is Grade 2 (whole site is over 56 ha.)
		Will it avoid the sterilisation of economic mineral reserves? Will it minimise the degradation/loss of soils due to new development?	0	Approximately half of the site within an area designated in the Minerals and Waste LDF but development would not have a negative impact.
	Minimise waste production and support the reuse and recycling of waste products	Will it encourage reduction in household waste, and increase waste recovery and recycling?		
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	0	Development unlikely to impact on air quality. Site lies in an area where air quality acceptable. Close to the Councils' Air Quality Management Area. Extensive and detailed air quality assessments will be required to assess the cumulative impacts of this and other proposed developments within the locality on air quality along with provision of a Low Emissions Strategy
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	-	Development largely compatible with neighbouring uses with minor negative impacts incapable of mitigation. Close proximity to the B1050 bypass to the south & east and the Guided Bus to the north with prevailing winds from the south west traffic noise will need assessment South east of the site is close to Hydro Eu Ltd Station Road a medium to large sized industrial type unit / uses - noise from activities / plant and equipment and vehicle movements are material considerations with significant negative impact potential in terms of health and well being and a poor quality living environment and possible noise nuisance. Possible noise and malodour from nearby Southwell Farm, Station Road. Some minor to moderate additional off-site road traffic noise generation on existing residential due to development related car movements but dependent on location of site entrance.
		Will it minimise, and where possible address, land contamination?	+	A small part of the site is in commercial / industrial use and it is adjacent to the Guided Busway (old railway line) and may have contaminated land. Site contains an area of filled land. Potential for minor benefits through remediation of minor contamination
		Will it protect and where possible enhance the quality of the water environment?	0	Assumptions for a neutral impact are that appropriate standards and pollution control measures will be achieved through the development process, e.g. as part of Sustainable Drainage Systems (Suds).

Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiversity?	0	No impact on protected sites and species (or impacts could be mitigated). Adjacent to a County Wildlife Site alongside the Cambridgeshire Guided Busway. Greatest impact likely to result from human disturbance of currently inaccessible farmland habitats. Badgers within Fish Ponds Wood may be an issue.
	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	0	Assumptions for a neutral impact are that existing features that warrant retention can be retained or appropriate mitigation will be achieved through the development process.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	+	Development would create minor opportunities for new Green Infrastructure as the promoter proposes provision of public open space and possible link to bridleway along the Guided Busway.
Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	-	Minor Negative Impact (Development conflicts with landscape character, minor negative impacts incapable of mitigation) - The development is at odds with the local landscape character and would have an adverse effect on the local landscape by adding a substantial urban extension into an open and rural landscape. To successfully set the proposed development into the existing landscape, and to preserve a landscape setting to Longstanton, substantial structural landscape will be required to the north, west and south of the development, giving genuine rural separation between the development and the village, and a soft, integrated edge treatment.
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	- / ---	Minor Negative Impact (development conflicts with townscape character, minor negative impacts incapable of mitigation) - Development would be large in relation to the existing village settlements and would adversely affect the landscape setting of Longstanton to the extent that it may be difficult to view Longstanton as separate from Northstowe.
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Archaeological potential will require further information but the assumption for a neutral impact is that it is likely appropriate mitigation can be achieved through the development process.
	Create places, spaces and buildings that work well, wear well and look good	Will it lead to developments built to a high standard of design and good place making that reflects local character?		

Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	+	Development would create minor additional opportunities for renewable energy. The assumption is that as an extension to Northstowe it should be possible to continue the exemplar of sustainability standards
		Will it promote energy efficiency?		
		Will it minimise contributions to climate change through sustainable construction practices?		
	Reduce vulnerability to future climate change effects	Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	0	The majority of the site is within Flood Zone 1 and no drainage issues that cannot be appropriately addressed. A small part of the site to the west is within Flood Zones 2 and 3a but the Northstowe Development Framework Document (DFD) that has recently been submitted identifies this land as open space.
		Will it minimise the likely impacts of climate change on the development through appropriate design?		
		Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?		
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?		
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?		
Inclusive Communities - Housing	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	+	Development would create minor opportunities for new public open space as the promoter proposes provision of open space as part of the development.
		Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?		
	Ensure all groups have access to decent, appropriate and affordable housing	Will it provide for housing for the ageing population?		
Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?		0	No effect on pitch or plot provision.	

Inclusive Communities - Redressing inequalities and involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	+	New settlement - an extension to Northstowe.
		Sub-Indicator: Distance to centre	0	Centre point of site beyond 1000m of nearest existing centre Majority of site would be within 800m of any new local centre developed as part of site.
		Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	+	New facilities or improved existing facilities are proposed of minor benefit. The promoter proposes a mixed use development of 900 dwellings with employment, retail, community uses, commercial uses and public open space.
		Will it improve relations between people from different backgrounds or social groups?		
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will it redress inequalities?		
		Will it increase the ability of people to influence decisions, including 'hard to reach' groups?		
	Encourage and enable the active involvement of local people in community activities	Will it encourage engagement with community activities?	+	New facilities or improved existing facilities are proposed of minor benefit. The promoter proposes a mixed use development of 900 dwellings with employment, retail, community uses, commercial uses and public open space.

Economic Activity		Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	+	Development would support minor additional employment opportunities.
	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	Development would have no effect on vitality or viability of existing centres. The assumption is that the local centre proposed will only be of a suitable scale to serve needs of new residents and will not impact on other centres.
		Will it encourage the rural economy and diversification, and support sustainable tourism?		
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it contribute to providing a range of employment opportunities, in accessible locations?	+	24.67 minutes from site to nearest employment area with 2000+ employees. 5 employment areas with 2000+ employees that can be accessed in less than 30mins - 1.6km walk.
		Will it improve the level of investment in key community services and infrastructure, including broadband?	-	Major utilities Infrastructure improvements required, but constraints can be addressed. Significant reinforcement and new network is required for electricity provision. There is insufficient spare mains water capacity within the distribution zone to supply the number of proposed properties which could arise if all the SHLAA sites within the zone were to be developed. Gas will require a Pressure Reduction Station to be built to allow a local low pressure infrastructure to be laid around the developments. The sewerage network is approaching capacity and will require investigation and mitigation.
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve access to education and training, and support provision of skilled employees to the economy?	0	As an extension of Northstowe children within the development would attend one of the seven proposed primary schools and the proposed secondary school that are identified in the Development Framework Document to serve the new town. As the reserve land would be one of the last phases of Northstowe to be developed the capacity of these schools, and their ability to extend would need to be assessed nearer the time. As the DFD is considering this site the location of schools, and their site size will be taken into account.

Transport	Reduce the need to travel and promote more sustainable transport choices.	Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	+	Total score of 15.
		Sub-indicator: Distance to bus stop / rail station	0	New settlement would require new bus stops which would mostly fall within 800m of the site. 708m ACF from the centre of the site to the nearest bus stop (Citi 5 - Longstanton). 883m ACF from the centre of the site to the nearest guided busway stop (Longstanton).
		Sub-indicator: Frequency of Public Transport	+++	Citi 5 - Hourly Service. Guided Busway - 10 Minute Service.
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	+	Citi 5 - 33 Minutes to Cambridge; 50 Minutes to St. Ives. Guided Busway - 23 Minutes to Cambridge; 10 Minutes to St. Ives.
		Sub-indicator: Distance for cycling to City Centre or Market Town	0	8.59km ACF from the centre of the site to St. Ives Market. 10.90km ACF from the centre of the site to Cambridge Market.
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	---	Insufficient capacity or access constraints that cannot be adequately mitigated. Site will be heavily reliant on the A14 for strategic access. It is difficult to see more than a small proportion of the sites in this area being deliverable prior to major improvements to the A14, and even this could require substantial mitigation measures. Capacity on the B1050 may become an issue as the core area of Northstowe is developed - the Highway Authority is considering access to this site as part of the Phase I of the Northstowe site.
		Will it make the transport network safer for and promote use of non-motorised modes?	+++	Would result in significant improvement to public transport, walking or cycling facilities. The Highway Authority will require new development to provide or contribute to the provision of infrastructure to encourage more sustainable transport links both on and off site. This is a large site, so provision or contribution from this site would result in significant improvement to public transport, walking or cycling facilities.

Site No. Site 243
Address Land west of Highfields Road & West Drive, Highfields Caldecote
Location Caldecote
Category of site Group Village
Site area 23.7

Theme	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	+	Approximately 1/3 of the site is previously developed land.
		Will it use land efficiently?		
		Will it protect and enhance the best and most versatile agricultural land?	0	Minor loss of best and most versatile agricultural land (Grade 2).
		Will it avoid the sterilisation of economic mineral reserves? Will it minimise the degradation/loss of soils due to new development?	0	Site not within an area designated in the Minerals and Waste LDF
	Minimise waste production and support the reuse and recycling of waste products	Will it encourage reduction in household waste, and increase waste recovery and recycling?		
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	0	Development unlikely to impact on air quality. Site lies in an area where air quality acceptable.
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	+++/?	This site has a history of noisy activities related to industrial / commercial uses. Residential development would have a positive impact and would result in significant improvements in the local noise climate and the living environment of existing residential premises. Development would remove existing use that creates nuisance, resulting in significant benefits. Retention of industrial has the potential to have a harmful impact on existing amenities.
		Will it minimise, and where possible address, land contamination?	+	Potential contamination, potential for benefits through remediation of contamination
		Will it protect and where possible enhance the quality of the water environment?	0	Development unlikely to affect water quality.
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiversity?	0	No impact on protected sites and species (or impacts could be mitigated).
	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	0	No impact on protected sites and species (or impacts could be mitigated).
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process.

Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	-	Minor Negative Impact (Development conflicts with landscape character, minor negative impacts incapable of mitigation) - This area provides wide open views from the north to the existing village edge some distance to the south of the A428.
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	-	Minor Negative Impact (Development conflicts with townscape character, minor negative impacts incapable of mitigation) - This area provides wide open views from the north to the existing village edge some distance to the south of the A428.
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	0	Neutral impact (generally compatible, or capable of being made compatible with local townscape character). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process.
	Create places, spaces and buildings that work well, wear well and look good	Will it lead to developments built to a high standard of design and good place making that reflects local character?		
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	0	Standard requirements for renewables would apply.
		Will it promote energy efficiency?		
		Will it minimise contributions to climate change through sustainable construction practices?		
	Reduce vulnerability to future climate change effects	Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	0	Flood Zone 1 and no drainage issues that cannot be appropriately addressed.
		Will it minimise the likely impacts of climate change on the development through appropriate design?		
		Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?		
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?		
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?		

Inclusive Communities - Housing	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	0	Neutral impact (existing features retained or appropriate mitigation).
	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?		
		Will it provide for housing for the ageing population?		
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	No effect on pitch or plot provision.
Inclusive Communities - Redressing inequalities and involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	-	Group village
		Sub-Indicator: Distance to centre	-	939m ACF from the centre to Caldecote Primary School, central in relation to the services and facilities within the village.
		Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	0	No facilities lost, and no new facilities proposed directly as a result of the development.
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will improve relations between people from different backgrounds or social groups?		
		Will it redress inequalities?		
		Will it increase the ability of people to influence decisions, including 'hard to reach' groups?		
	Encourage and enable the active involvement of local people in community activities	Will it encourage engagement with community activities?	0	No facilities lost, and no new facilities proposed directly as a result of the development.

Economic Activity		Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	---	Development would have significant negative effect on employment opportunities, as a result of the loss of existing employment land.
	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	Development would have no effect on vitality or viability of existing centres. The indicator is likely to apply particularly to sites which include retail, offices, or leisure uses.
		Will it encourage the rural economy and diversification, and support sustainable tourism?		
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it contribute to providing a range of employment opportunities, in accessible locations?	+	19.89 minutes from site to nearest employment area with 2000+ employees. 7 employment areas with 2000+ employees that can be accessed in less than 30mins - 1.6km walk.
		Will it improve the level of investment in key community services and infrastructure, including broadband?	-	Minor Utilities Infrastructure improvements required, but constraints can be addressed. There is insufficient spare mains water capacity within the distribution zone to supply the number of proposed properties which could arise if all the SHLAA sites within the zone were to be developed. The sewerage network is at capacity and will require mitigation. Electricity supply is likely to require local and upstream reinforcement.
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve access to education and training, and support provision of skilled employees to the economy?	-	School capacity not sufficient, but significant issues can be adequately addressed.

Transport	Reduce the need to travel and promote more sustainable transport choices.	Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	+++	Total score of 20.
		Sub-indicator: Distance to bus stop / rail station	+++	335m ACF from the centre of the site to the nearest bus stop
		Sub-indicator: Frequency of Public Transport	+	20 minute service (Citi 4). Less than hourly service (14 Service).
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	+++	20 minutes from Caldecote to Cambridge (Citi 4). 54 minutes from Caldecote to Cambridge (14 Service).
		Sub-indicator: Distance for cycling to City Centre or Market Town	+	9.78km ACF from the centre of the site to Cambridge Market.
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	0	No capacity constraints identified, safe access can be achieved.
		Will it make the transport network safer for and promote use of non-motorised modes?	0	No impact

Site No. Site 244
Address Land West of Over Road, Longstanton
Location Longstanton
Category of site Group Village
Site area 4.08

Theme	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	0	The site includes one residential property and a farm building which appears to have been used for commercial / industrial.
		Will it use land efficiently?		
		Will it protect and enhance the best and most versatile agricultural land?	0	Development would not affect best and most versatile agricultural land (Grades 1 and 2).
	Minimise waste production and support the reuse and recycling of waste products	Will it avoid the sterilisation of economic mineral reserves? Will it minimise the degradation/loss of soils due to new development?	0	Site not within an area designated in the Minerals and Waste LDF.
Will it encourage reduction in household waste, and increase waste recovery and recycling?				
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	0	Development unlikely to impact on air quality. Site lies in an area where air quality acceptable.
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	-	Development compatible with neighbouring uses. Site close to the B1050 bypass - potential for noise. Some minor to moderate additional road traffic noise generation impact on existing residential due to development related car movements but dependent on location of site entrance.
		Will it minimise, and where possible address, land contamination?	+	Part of the site was formerly used for farm and commercial use and may have contaminated land. Potential for minor benefits through remediation of minor contamination
		Will it protect and where possible enhance the quality of the water environment?	0	Assumptions for a neutral impact are that appropriate standards and pollution control measures will be achieved through the development process, e.g. as part of Sustainable Drainage Systems (Suds)
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiversity?	0	No impact on protected sites and species (or impacts could be mitigated).
	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	0	Assumptions for a neutral impact are that existing features that warrant retention can be retained or appropriate mitigation will be achieved through the development process.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process. A footpath lies to the north east and south east of the site.

Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	-	Minor Negative Impact (Development conflicts with landscape character, minor negative impacts incapable of mitigation) - The land creates a rural buffer between the bypass and the village proper. It is located in an exposed location where there is a clear edge to the village. However, it may be possible to integrate some more limited development if the dense hedgerow were retained and additional suitable landscaping provided.
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	-	Minor Negative Impact (development conflicts with townscape character, minor negative impacts incapable of mitigation) - The land creates a rural buffer between the bypass and the village proper. It is located in an exposed location where there is a clear edge to the village. However, it may be possible to integrate some more limited development if the dense hedgerow were retained and additional suitable landscaping provided.
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Archaeological potential will require further information but the assumption for a neutral impact is that it is likely appropriate mitigation can be achieved through the development process.
	Create places, spaces and buildings that work well, wear well and look good	Will it lead to developments built to a high standard of design and good place making that reflects local character?		
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	0	Standard requirements for renewables would apply.
		Will it promote energy efficiency?		
		Will it minimise contributions to climate change through sustainable construction practices?		
	Reduce vulnerability to future climate change effects	Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	0	A very small part of the site is within Flood Zone 2, drainage issues capable of being appropriately addressed.
		Will it minimise the likely impacts of climate change on the development through appropriate design?		
		Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?		
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?		
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?		

Inclusive Communities - Housing	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	0	Neutral impact (existing features retained or appropriate mitigation). Assumption is standard requirements for open space would apply.
	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?		
		Will it provide for housing for the ageing population?		
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	No effect on pitch or plot provision.
Inclusive Communities - Redressing inequalities and involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	-	Group Village
		Sub-Indicator: Distance to centre	+	581m from the centre of the site to a point along Hattons Park, a central point in the village surrounded by services and facilities.
		Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	0	No facilities lost, and no new facilities proposed directly as a result of the development.
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will improve relations between people from different backgrounds or social groups?		
		Will it redress inequalities?		
	Encourage and enable the active involvement of local people in community activities	Will it increase the ability of people to influence decisions, including 'hard to reach' groups?		
Will it encourage engagement with community activities?		0	No facilities lost, and no new facilities proposed directly as a result of the development.	

Economic Activity		Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	0	Development would have no effect on employment land or premises.
	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	Development would have no effect on vitality or viability of existing centres. The assumption is that the local centre proposed will only be of a suitable scale to serve needs of new residents and will not impact on other centres.
		Will it encourage the rural economy and diversification, and support sustainable tourism?		
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it contribute to providing a range of employment opportunities, in accessible locations?	+	15.84 minutes from site to nearest employment area with 2000+ employees. 4 employment areas with 2000+ employees that can be accessed in less than 30mins - 1.6km walk.
		Will it improve the level of investment in key community services and infrastructure, including broadband?	+	Minor Utilities Infrastructure improvements required, but constraints can be addressed. There is insufficient spare mains water capacity within the distribution zone to supply the number of proposed properties which could arise if all the SHLAA sites within the zone were to be developed. The WWTW is operating close to capacity and the sewerage network is at capacity and both will require mitigation.
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve access to education and training, and support provision of skilled employees to the economy?	-	School capacity not sufficient, but significant issues can be adequately addressed. Insufficient primary and secondary school capacity.

Transport	Reduce the need to travel and promote more sustainable transport choices.	Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	0	Total score of 13.
		Sub-indicator: Distance to bus stop / rail station	+	439m ACF from the centre of the site to the nearest bus stop.
		Sub-indicator: Frequency of Public Transport	-	Hourly Service
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	0	33 minutes from Longstanton to Cambridge
		Sub-indicator: Distance for cycling to City Centre or Market Town	+	8.86km ACF from the centre of the site to St. Ives Market.
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	0 / -	No capacity constraints identified, safe access can be achieved. A14 capacity issues.
		Will it make the transport network safer for and promote use of non-motorised modes?	0	No impact.

Site No. Site 245
Address Bird Farm Field, Cambridge Road, Fulbourn
Location Fulbourn
Category of site Rural Centre
Site area 5.67

Theme	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	0	No previously developed land.
		Will it use land efficiently?		
		Will it protect and enhance the best and most versatile agricultural land?	-	Minor loss of best and most versatile agricultural land (Grades 1 and 2) - site is all Grade 2 (5.67 ha.).
		Will it avoid the sterilisation of economic mineral reserves? Will it minimise the degradation/loss of soils due to new development?	0	Site not within an area designated in the Minerals and Waste LDF.
	Minimise waste production and support the reuse and recycling of waste products	Will it encourage reduction in household waste, and increase waste recovery and recycling?		
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	0	Development unlikely to impact on air quality. Site lies in an area where air quality acceptable.
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	-	Development compatible with neighbouring uses. The South of the site is bounded by the busy Cambridge Road. Traffic noise will need assessment. However residential use is likely to be acceptable with careful noise mitigation.
		Will it minimise, and where possible address, land contamination?	0	Development not on land likely to be contaminated.
		Will it protect and where possible enhance the quality of the water environment?	0	Development unlikely to affect water quality. The whole site is within Groundwater Source Protection Zone 1 which does not rule out development but may influence land use or require pollution control measures. Assumptions for a neutral impact are that appropriate standards and pollution control measures will be achieved through the development process and will mitigate any impact on groundwater.
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiversity?	0	No impact on protected sites and species (or impacts could be mitigated).
	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	0	Assumptions for a neutral impact are that existing features that warrant retention can be retained or appropriate mitigation will be achieved through the development process.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process.

Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	---	Significant Negative Impact (Development conflicts with landscape character, with significant negative impacts incapable of mitigation) - It would be very difficult to mitigate against the adverse impacts of development in this very visible location. The site is adjoins the south western edge of Fulbourn and development would adjoin residential properties to the north and east. The land is higher than the adjoining residential properties, which would make it would be difficult to integrate development into the built form.
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	---	Significant Negative Impact (Development conflicts with townscape character, with significant negative impacts incapable of mitigation) - The development's scale and location and would extend existing settlements in a way that would have a very significant adverse effect on existing settlements. The site is adjoins the south western edge of Fulbourn and development of the land to the east of Hinton Road site would adjoin residential properties to the east. However, development in this location would reduce the separation between the existing built areas of Cherry Hinton and Fulbourn.
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	-	Minor Negative Impact on historic Assets (incapable of satisfactory mitigation) – The site forms an important part of the setting a Grade II Listed Building and the wider setting of two Conservation Areas. However, with careful design it may be possible to mitigate any impact on the wider historic environment with a smaller scale of development. Archaeological potential will require further information but the assumption for a neutral impact is that it is likely appropriate mitigation can be achieved through the development process.
	Create places, spaces and buildings that work well, wear well and look good	Will it lead to developments built to a high standard of design and good place making that reflects local character?		
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	0	Standard requirements for renewables would apply.
		Will it promote energy efficiency?		
	Reduce vulnerability to future climate change effects	Will it minimise contributions to climate change through sustainable construction practices?		
		Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	0	Flood Zone 1 and no drainage issues that cannot be appropriately addressed.
		Will it minimise the likely impacts of climate change on the development through appropriate design?		
	Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?			
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?		
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?		

Inclusive Communities - Housing	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	+	Development would create minor opportunities for new public open space as the promoter includes open space as part of the development.
	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?		
		Will it provide for housing for the ageing population?		
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	No effect on pitch or plot provision.
Inclusive Communities - Redressing Inequalities and involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	+	Rural Centre
		Sub-Indicator: Distance to centre	-	898m ACF from the centre of the site Fulbourn High Street -a cluster of services and facilities within the village.
		Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	0	No facilities lost, and no new facilities proposed directly as a result of the development.
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will improve relations between people from different backgrounds or social groups?		
		Will it redress inequalities?		
	Encourage and enable the active involvement of local people in community activities	Will it increase the ability of people to influence decisions, including 'hard to reach' groups?		
		Will it encourage engagement with community activities?	0	No facilities lost, and no new facilities proposed directly as a result of the development.

Economic Activity		Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	0	Development would have no effect on employment land or premises.
	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	Development would have no effect on vitality or viability of existing centres. The assumption is that the local centre proposed will only be of a suitable scale to serve needs of new residents and will not impact on other centres.
		Will it encourage the rural economy and diversification, and support sustainable tourism?		
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it contribute to providing a range of employment opportunities, in accessible locations?	+	24.04 minutes from site to nearest employment area with 2000+ employees. 2 employment areas with 2000+ employees that can be accessed in less than 30mins - 1.6km walk.
		Will it improve the level of investment in key community services and infrastructure, including broadband?	-	Major utilities Infrastructure improvements required, but constraints can be addressed. The electricity, mains water, gas and sewerage systems will need reinforcement to increase capacity.
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve access to education and training, and support provision of skilled employees to the economy?	-	Insufficient spare school capacity but potential for improvement to meet needs. Insufficient secondary and primary school places.

Transport	Reduce the need to travel and promote more sustainable transport choices.	Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	+	Total score of 16.
		Sub-indicator: Distance to bus stop / rail station	+++	362m ACF from the centre of the site to the nearest bus stop.
		Sub-indicator: Frequency of Public Transport	+	20 Minute Service
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	-	50 Minutes from Fulbourn to Cambridge.
		Sub-indicator: Distance for cycling to City Centre or Market Town	+	6.63km ACF from the centre of the site to Cambridge Market.
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	0	No capacity constraints identified, safe access can be achieved.
		Will it make the transport network safer for and promote use of non-motorised modes?	+++	The Highway Authority will require new development to provide or contribute to the provision of infrastructure to encourage more sustainable transport links both on and off site. Provision or contribution from this site would result in a significant improvement to public transport, walking or cycling facilities

Site No. Site 246
Address Land east of B1050, Longstanton (employment allocation)
Location Longstanton
Category of site Group Village
Site area 6.53

Theme	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	0	No previously developed land.
		Will it use land efficiently?		
		Will it protect and enhance the best and most versatile agricultural land?	0	Development would not affect best and most versatile agricultural land (Grades 1 and 2).
	Minimise waste production and support the reuse and recycling of waste products	Will it avoid the sterilisation of economic mineral reserves? Will it minimise the degradation/loss of soils due to new development?	0	Site not within an area designated in the Minerals and Waste LDF.
Will it encourage reduction in household waste, and increase waste recovery and recycling?				
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	0	Development unlikely to impact on air quality. Site lies in an area where air quality acceptable.
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	-	Development compatible with neighbouring uses. Site close to the B1050 bypass - potential for noise. Some minor to moderate additional road traffic noise generation impact on existing residential due to development related car movements but dependent on location of site entrance.
		Will it minimise, and where possible address, land contamination?	0	Development not on land likely to be contaminated.
		Will it protect and where possible enhance the quality of the water environment?	0	Assumptions for a neutral impact are that appropriate standards and pollution control measures will be achieved through the development process, e.g. as part of Sustainable Drainage Systems (Suds)
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiversity?	0	No impact on protected sites and species (or impacts could be mitigated).
	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	0	Assumptions for a neutral impact are that existing features that warrant retention can be retained or appropriate mitigation will be achieved through the development process.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process. A footpath lies to the north east of the site.

Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	-	Minor Negative Impact (Development conflicts with landscape character, minor negative impacts incapable of mitigation) - The site lies in an exposed area where the landscape is flat with long views, particularly across to the west, although this is broken up in part by field boundaries. The site is bisected by Hattons Road. However, the site has outline planning permission for employment uses, which includes details of the landscaping to mitigate and integrate the site into the landscape.
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	-	Minor Negative Impact (development conflicts with townscape character, minor negative impacts incapable of mitigation) - The site lies in an exposed area where the landscape is flat with long views, particularly across to the west, although this is broken up in part by field boundaries. The site is bisected by Hattons Road. However, the site has outline planning permission for employment uses, which includes details of the landscaping to mitigate and integrate the site into the landscape.
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Archaeological potential will require further information but the assumption for a neutral impact is that it is likely appropriate mitigation can be achieved through the development process.
	Create places, spaces and buildings that work well, wear well and look good	Will it lead to developments built to a high standard of design and good place making that reflects local character?		
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	0	Standard requirements for renewables would apply.
		Will it promote energy efficiency?		
		Will it minimise contributions to climate change through sustainable construction practices?		
	Reduce vulnerability to future climate change effects	Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	0	Flood Zone 1 and no drainage issues that cannot be appropriately addressed.
		Will it minimise the likely impacts of climate change on the development through appropriate design?		
	Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?			
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?		
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?		

Inclusive Communities - Housing	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	0	Neutral impact (existing features retained or appropriate mitigation). Assumption is standard requirements for open space would apply.
	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?		
		Will it provide for housing for the ageing population?		
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	No effect on pitch or plot provision.
Inclusive Communities - Redressing Inequalities and involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	-	Group Village
		Sub-Indicator: Distance to centre	+	481m from the centre of the site to a point along Hattons Park, a central point in the village surrounded by services and facilities.
		Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	0	No facilities lost, and no new facilities proposed directly as a result of the development.
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will improve relations between people from different backgrounds or social groups?		
		Will it redress inequalities?		
	Encourage and enable the active involvement of local people in community activities	Will it increase the ability of people to influence decisions, including 'hard to reach' groups?		
Will it encourage engagement with community activities?		0	No facilities lost, and no new facilities proposed directly as a result of the development.	

Economic Activity		Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	0	Development would have no effect on employment land or premises.
	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	Development would have no effect on vitality or viability of existing centres. The assumption is that the local centre proposed will only be of a suitable scale to serve needs of new residents and will not impact on other centres.
		Will it encourage the rural economy and diversification, and support sustainable tourism?		
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it contribute to providing a range of employment opportunities, in accessible locations?	+	15.78 minutes from site to nearest employment area with 2000+ employees. 4 employment areas with 2000+ employees that can be accessed in less than 30mins - 1.6km walk.
		Will it improve the level of investment in key community services and infrastructure, including broadband?	+	Minor Utilities Infrastructure improvements required, but constraints can be addressed. There is insufficient spare mains water capacity within the distribution zone to supply the number of proposed properties which could arise if all the SHLAA sites within the zone were to be developed. The WWTW is operating close to capacity and the sewerage network is at capacity and both will require mitigation.
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve access to education and training, and support provision of skilled employees to the economy?	-	School capacity not sufficient, but significant issues can be adequately addressed. Insufficient primary and secondary school capacity.

Transport	Reduce the need to travel and promote more sustainable transport choices.	Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	0	Total score of 13.
		Sub-indicator: Distance to bus stop / rail station	+	447m ACF from the centre of the site to the nearest bus stop.
		Sub-indicator: Frequency of Public Transport	-	Hourly Service
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	0	33 minutes from Longstanton to Cambridge
		Sub-indicator: Distance for cycling to City Centre or Market Town	+	9.11km ACF from the centre of the site to St. Ives Market.
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	0	No capacity constraints identified, safe access can be achieved. A14 capacity issues.
		Will it make the transport network safer for and promote use of non-motorised modes?	0	No impact.

Site No. Site 247
Address Land west of Highfields Road, Highfields Caldecote
Location Caldecote
Category of site Group Village
Site area 12.58

Theme	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	0	Arable land
		Will it use land efficiently?		
		Will it protect and enhance the best and most versatile agricultural land?	0	Minor loss of best and most versatile agricultural land (Grade 2).
		Will it avoid the sterilisation of economic mineral reserves? Will it minimise the degradation/loss of soils due to new development?	0	Site not within an area designated in the Minerals and Waste LDF
	Minimise waste production and support the reuse and recycling of waste products	Will it encourage reduction in household waste, and increase waste recovery and recycling?		
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	0	Development unlikely to impact on air quality. Site lies in an area where air quality acceptable.
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	-	Adjoining site has a history of noisy activities related to industrial / commercial uses. Residential development of that site would have a positive impact and would result in significant improvements in the local noise climate and the living environment of existing residential premises. Development would remove existing use that creates nuisance, resulting in significant benefits. Retention of industrial on the adjoining site would have a negative impact on the residential amenity of this site. .
		Will it minimise, and where possible address, land contamination?	+	Potential contamination, potential for benefits through remediation of contamination
		Will it protect and where possible enhance the quality of the water environment?	0	Development unlikely to affect water quality.
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiversity?	0	No impact on protected sites and species (or impacts could be mitigated).
	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	0	No impact on protected sites and species (or impacts could be mitigated).
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process.

Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	-	Minor Negative Impact (Development conflicts with landscape character, minor negative impacts incapable of mitigation) - This area provides wide open views from the north to the existing village edge some distance to the south of the A428.
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	-	Minor Negative Impact (Development conflicts with townscape character, minor negative impacts incapable of mitigation) - This area provides wide open views from the north to the existing village edge some distance to the south of the A428.
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	0	Neutral impact (generally compatible, or capable of being made compatible with local townscape character). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process.
	Create places, spaces and buildings that work well, wear well and look good	Will it lead to developments built to a high standard of design and good place making that reflects local character?		
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	0	Standard requirements for renewables would apply.
		Will it promote energy efficiency?		
		Will it minimise contributions to climate change through sustainable construction practices?		
	Reduce vulnerability to future climate change effects	Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	0	Flood Zone 1 and no drainage issues that cannot be appropriately addressed.
		Will it minimise the likely impacts of climate change on the development through appropriate design?		
		Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?		
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?		
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?		

Inclusive Communities - Housing	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	0	Neutral impact (existing features retained or appropriate mitigation).
	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?		
		Will it provide for housing for the ageing population?		
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	No effect on pitch or plot provision.
Inclusive Communities - Redressing inequalities and involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	-	Group village
		Sub-Indicator: Distance to centre	-	994m ACF from the centre to Caldecote Primary School, central in relation to the services and facilities within the village.
		Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	0	No facilities lost, and no new facilities proposed directly as a result of the development.
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will improve relations between people from different backgrounds or social groups?		
		Will it redress inequalities?		
	Encourage and enable the active involvement of local people in community activities	Will it increase the ability of people to influence decisions, including 'hard to reach' groups?		
Will it encourage engagement with community activities?		0	No facilities lost, and no new facilities proposed directly as a result of the development.	

Economic Activity		Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	0	Development would have no effect on employment land or premises.
	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	Development would have no effect on vitality or viability of existing centres. The indicator is likely to apply particularly to sites which include retail, offices, or leisure uses.
		Will it encourage the rural economy and diversification, and support sustainable tourism?		
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it contribute to providing a range of employment opportunities, in accessible locations?	+	17.83 minutes from site to nearest employment area with 2000+ employees. 9 employment areas with 2000+ employees that can be accessed in less than 30mins - 1.6km walk.
		Will it improve the level of investment in key community services and infrastructure, including broadband?	-	Minor Utilities Infrastructure improvements required, but constraints can be addressed. There is insufficient spare mains water capacity within the distribution zone to supply the number of proposed properties which could arise if all the SHLAA sites within the zone were to be developed. The sewerage network is at capacity and will require mitigation. Electricity supply is likely to require local and upstream reinforcement.
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve access to education and training, and support provision of skilled employees to the economy?	-	School capacity not sufficient, but significant issues can be adequately addressed.

Transport	Reduce the need to travel and promote more sustainable transport choices.	Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	+++	Total score of 20.
		Sub-indicator: Distance to bus stop / rail station	+++	213m ACF from the centre of the site to the nearest bus stop
		Sub-indicator: Frequency of Public Transport	+	20 minute service (Citi 4). Less than hourly service (14 Service).
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	+++	20 minutes from Caldecote to Cambridge (Citi 4). 54 minutes from Caldecote to Cambridge (14 Service).
		Sub-indicator: Distance for cycling to City Centre or Market Town	+	9.58km ACF from the centre of the site to Cambridge Market.
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	0	No capacity constraints identified, safe access can be achieved.
		Will it make the transport network safer for and promote use of non-motorised modes?	0	No impact

Site No. Site 248
Address Hanley Grange, east of A1301 and west of A11
Location countryside
Category of site New Settlement
Site area 264.56

Theme	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	0	Only a very small part of the site, at Hinxtan Grange in the centre of this very large site, is previously developed land.
		Will it use land efficiently?		
		Will it protect and enhance the best and most versatile agricultural land?	---	Significant loss (20 hectares or more) of best and most versatile agricultural land (Grades 1 and 2) - the whole site is Grade 2 (over 264 ha.)
	Minimise waste production and support the reuse and recycling of waste products	Will it avoid the sterilisation of economic mineral reserves? Will it minimise the degradation/loss of soils due to new development?	0	Site not within an area designated in the Minerals and Waste LDF.
Will it encourage reduction in household waste, and increase waste recovery and recycling?				
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	0 / -	Development could impact on air quality, with minor negative impacts incapable of mitigation - the proposal is of a significant size and close to busy road infrastructures. There is a potential for significant increases in traffic emissions and static emissions that could affect local air quality. Air quality would not give reason for objection although extensive and detailed air quality assessments will be required to assess the impact of such a development at pre-application stage
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	- / ---	Some minor to moderate additional road traffic noise generation impact on existing residential due to development related car movements but dependent on location of site entrance. Development should be compatible with neighbouring uses - the west of the site is bounded by and runs parallel to the A1301 and a mainline railway to east. However residential use is likely to be acceptable with careful noise mitigation SCDC has had pre-application discussions with the Genome Campus regarding proposals for 2 medium to large wind turbines on land immediately to the south. These uses may be incompatible and in conflict and it is uncertain whether mitigation measures on the proposed development site alone can provide an acceptable ambient noise environment.
		Will it minimise, and where possible address, land contamination?	0	Development not on land likely to be contaminated.
		Will it protect and where possible enhance the quality of the water environment?	0 / -	Development has the potential to affect water quality as the site is within Groundwater Source Protection Zones 1, 2 and 3. In the absence of detailed information, the assumptions for a minor negative / neutral impact are that the site is large enough to avoid incompatible development in Zone 1 and/or appropriate standards and pollution control measures will be achieved through the development process, e.g. as part of Sustainable Drainage Systems (Suds).
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiversity?	-	Minor negative impact on protected sites and species incapable of mitigation. Bush Park, River Cam and Shelford-Haverhill Disused Railway – Pampisford / Great Abington County Wildlife Sites lie approximately 750m to 2km from the site. Groundwater and spring flows to nearby wetland SSSI (Sawston Hall Meadows, Dernford Fen, Thriplow Peat Holes, Thriplow Meadows, Fowlmere Watercress Beds). Development will place additional pressure on an overstretched system. Surface run-off and pollution into the River Cam would reduce water quality, and provide pathways for eutrophication of aquatic and riparian habitats as well as SSSI. The river and surrounding land supports a wide range of protected species and it is likely that the standard suite of Cambridgeshire protected species will be present. The chalk substrate in the area is quite a hotspot for scarce arable plants, and a prime location for enhancement to encourage stone curlew back into Cambridgeshire. Several natural environment constraints which would require further survey and investigation. However, with an appropriate scale of development and careful design it should be possible to mitigate these impacts.

sity	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	-	Minor Negative Impact (Existing features unlikely to be retained in their entirety, impacts cannot be fully mitigated) - Development could result in fragmentation of a large area of grassland in the centre of site but the site is lacking in hedgerows and trees, which are located in one part of the site, therefore there is potential for mitigation and habitat enhancement across the whole site.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	+ / 0	Development would create minor opportunities for new Green Infrastructure. However, given the location of the site, constrained by major roads on most sides and the distance of this site from nearby villages, this may only serve new residents.
Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	---	Significant Negative Impact (Development conflicts with landscape character, with significant negative impacts incapable of mitigation) - The form, scale and character of the proposal is likely to be at odds with the local landscape, overwhelming the small-scale river valley landscape. Through careful planning, phasing and design mitigation measures can be incorporated into the site's design to reduce the visual impact of the development. However, mitigation of a large-scale development would be very difficult. The additional infrastructure required to connect the proposed development would add further damage.
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	---	Significant Negative Impact (Development conflicts with townscape character, with significant negative impacts incapable of mitigation) - The form, scale and character of the proposal is likely to be at odds with the local landscape and settlement pattern, overwhelming the local village character and small-scale river valley landscape. Through careful planning, phasing and design mitigation measures can be incorporated into the site's design to reduce the visual impact of the development. However, mitigation of a large-scale development would be very difficult. The additional infrastructure required to connect the proposed development would add further damage.
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	-	Minor Negative Impact on historic Assets (incapable of satisfactory mitigation) – site forms an important part of the setting of three Conservation Areas, one Grade II* and a number of Grade II Listed Buildings, two Scheduled Monuments and contains significant archaeology potential. Several historic environment constraints and significant sites and settings potentially compromised. The need to preserve the setting of numerous historic features and areas imposes constraints on the development. However, with an appropriate scale of development and careful design it should be possible to mitigate these impacts. Significant archaeological interest is likely and will need early assessment.
	Create places, spaces and buildings that work well, wear well and look good	Will it lead to developments built to a high standard of design and good place making that reflects local character?		

Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	+++ / +	Development of a new settlement of 5,000 would create major / minor additional opportunities for renewable energy, depending upon viability.
		Will it promote energy efficiency?		
		Will it minimise contributions to climate change through sustainable construction practices?		
	Reduce vulnerability to future climate change effects	Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	0	Flood Zone 1 and no drainage issues that cannot be appropriately addressed.
		Will it minimise the likely impacts of climate change on the development through appropriate design?		
		Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?		
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?		
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?		
Inclusive Communities - Housing	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	+	Development would create minor opportunities for new public open space as the promoter proposes provision of open space as part of the development.
	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?		
		Will it provide for housing for the ageing population?		
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	No effect on pitch or plot provision.

Inclusive Communities - Redressing inequalities and involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	+	New settlement	
		Sub-Indicator: Distance to centre	0	Centre point of site beyond 1000m of nearest existing centre Majority of site would be within 800m of any new local centre developed as part of site.	
		Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	+		New facilities or improved existing facilities are proposed of minor benefit. New settlement comprising 5,000 dwellings, employment, retail, community uses, commercial uses and public open space. The assumption is that due to the location of the site, it is of limited benefit many existing residents in nearby villages.
		Will improve relations between people from different backgrounds or social groups?			
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will it redress inequalities?			
		Will it increase the ability of people to influence decisions, including 'hard to reach' groups?			
	Encourage and enable the active involvement of local people in community activities	Will it encourage engagement with community activities?	+		New facilities or improved existing facilities are proposed of minor benefit. New settlement comprising 5,000 dwellings, employment, retail, community uses, commercial uses and public open space. The assumption is that due to the location of the site, it is of limited benefit many existing residents in nearby villages.

Economic Activity	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	+	Development would support minor additional employment opportunities.
		Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	Development would have no effect on vitality or viability of existing centres. The assumption is that any retail proposed will only be of a suitable scale to serve needs of new residents and will not impact on other centres.
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it encourage the rural economy and diversification, and support sustainable tourism?		
		Will it contribute to providing a range of employment opportunities, in accessible locations?	+	27.42 minutes from site to nearest employment area with 2000+ employees. Only 1 employment area with 2000+ employees that can be accessed in less than 30mins - 1.6km walk.
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve the level of investment in key community services and infrastructure, including broadband?	-	Major utilities Infrastructure improvements required, but constraints can be addressed. Electricity is not supportable from existing network. There is insufficient spare mains water capacity within the distribution zone to supply the number of proposed properties which could arise if all the SHLAA sites within the zone were to be developed. Gas would require significant Medium Pressure reinforcement. Significant infrastructure upgrades will be required to the WWTW and sewerage network.
		Will it improve access to education and training, and support provision of skilled employees to the economy?	-	School capacity not sufficient, but significant issues can be adequately addressed through on-site provision.

Transport	Reduce the need to travel and promote more sustainable transport choices.	Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	0	Total score of 14.
		Sub-indicator: Distance to bus stop / rail station	0	New settlement would require new bus stops which would mostly fall within 800m of the site. 1,240m ACF from the centre of the site to the nearest bus stop (Citi 7)
		Sub-indicator: Frequency of Public Transport	+	New settlement would have at least a 20 minute bus service to Cambridge, equivalent to Cambourne Citi 4. Hourly Service
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	+	29 Minutes from Hinxton Bus stop to Cambridge.
		Sub-indicator: Distance for cycling to City Centre or Market Town	0	8.86km ACF from the centre of the site to Saffron Walden Market. 12.98km ACF from the centre of the site to Cambridge Market.
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	+ / 0	No capacity constraints identified that cannot be addressed, would result in minor improvement in highway capacity or improve highway access. The development will only be acceptable to the Highways Agency if development is as self contained as possible to minimise impact on the SRN – a less sustainable proposal could result in substantial impacts on these routes. The local highway authority would expect provision of at least two accesses, possibly three, which should be possible, alongside upgrade to the A1301 / A505 roundabout.
		Will it make the transport network safer for and promote use of non-motorised modes?	+++	Would result in significant improvement to public transport, walking or cycling facilities. The development will only be acceptable to the Highways Agency if development is as self contained as possible to minimise impact on the SRN. The Highway Authority will require new development to provide or contribute to the provision of a significant level of new infrastructure to encourage more sustainable transport links both on and off site. Provision or contribution from this site would result in minor improvement to public transport, walking or cycling facilities.

Site No. Site 249
Address Willow Stables, Whitecroft Road, Meldreth
Location Meldreth
Category of site Group Village
Site area 2.23

Theme	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	0	No previously developed land.
		Will it use land efficiently?		
		Will it protect and enhance the best and most versatile agricultural land?	-	Minor loss of best and most versatile agricultural land (Grades 1 and 2) - Grade 2.
	Minimise waste production and support the reuse and recycling of waste products	Will it avoid the sterilisation of economic mineral reserves? Will it minimise the degradation/loss of soils due to new development?	0	Site not within an area designated in the Minerals and Waste LDF.
Will it encourage reduction in household waste, and increase waste recovery and recycling?				
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	0	Development unlikely to impact on air quality. Site lies in an area where air quality acceptable.
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	0	Development compatible with neighbouring uses.
		Will it minimise, and where possible address, land contamination?	0	Development not on land likely to be contaminated
		Will it protect and where possible enhance the quality of the water environment?	0	Development unlikely to affect water quality. Assumptions for a neutral impact are that appropriate standards and pollution control measures will be achieved through the development process and will mitigate any impact on groundwater.
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiversity?	0	No impact on protected sites and species (or impacts could be mitigated).
	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	0	Assumptions for a neutral impact are that existing features that warrant retention can be retained or appropriate mitigation will be achieved through the development process.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process.

Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	-	Minor Negative Impact (Development conflicts with landscape character, minor negative impacts incapable of mitigation) - Development of this site would have an adverse effect on the landscape setting of Meldreth by the development of part of the enclosed paddocks forming a transition between the village and the open countryside. Whilst the impact of this could be partly mitigated by a low density scheme which sought to retain most of the trees and hedgerows on the site, it would be more exposed to views from the north on Whitecroft Road and so would be detrimental to the very rural character of this part of Meldreth..
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	0	Neutral impact (generally compatible, or capable of being made compatible with local townscape character). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process.
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Archaeological potential will require further information but the assumption for a neutral impact is that it is likely appropriate mitigation can be achieved through the development process.
	Create places, spaces and buildings that work well, wear well and look good	Will it lead to developments built to a high standard of design and good place making that reflects local character?		
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	0	Standard requirements for renewables would apply.
		Will it promote energy efficiency?		
		Will it minimise contributions to climate change through sustainable construction practices?		
	Reduce vulnerability to future climate change effects	Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	0	Approximately four-fifths of site in Flood Zone 1 with no drainage issues that cannot be appropriately addressed. Remainder of site in zone 3 and should not be developed.
		Will it minimise the likely impacts of climate change on the development through appropriate design?		
	Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?			
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?		
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?		

Inclusive Communities - Housing	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	0	Neutral impact (existing features retained or appropriate mitigation).
	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?		
		Will it provide for housing for the ageing population?		
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	No effect on pitch or plot provision.
Inclusive Communities - Redressing inequalities and involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	-	Group Village
		Sub-Indicator: Distance to centre	+	503m from the centre of the site to the village hall which is surrounded by a cluster of other services and facilities.
		Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	0	No facilities lost, and no new facilities proposed directly as a result of the development.
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will improve relations between people from different backgrounds or social groups?		
		Will it redress inequalities?		
		Will it increase the ability of people to influence decisions, including 'hard to reach' groups?		
	Encourage and enable the active involvement of local people in community activities	Will it encourage engagement with community activities?	0	No facilities lost, and no new facilities proposed directly as a result of the development.

Economic Activity		Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	0	Development would have no effect on employment land or premises. Riding School on site has ceased operation.
	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	Development would have no effect on vitality or viability of existing centres. The indicator is likely to apply particularly to sites which include retail, offices, or leisure uses.
		Will it encourage the rural economy and diversification, and support sustainable tourism?		
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it contribute to providing a range of employment opportunities, in accessible locations?	+++	10.69 minutes from site to nearest employment area with 2000+ employees. 2 employment areas with 2000+ employees can be accessed in less than 30mins - 1.6km walk.
		Will it improve the level of investment in key community services and infrastructure, including broadband?	-	Minor Utilities Infrastructure improvements required, but constraints can be addressed. There is insufficient spare mains water capacity within the distribution zone to supply the number of proposed properties which could arise if all the SHLAA sites within the zone were to be developed. The WWTW is operating close to capacity and the sewerage network is at capacity and both will require mitigation.
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve access to education and training, and support provision of skilled employees to the economy?	-	School capacity not sufficient, but significant issues can be adequately addressed.

Transport	Reduce the need to travel and promote more sustainable transport choices.	Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	+	Total score of 16.
		Sub-indicator: Distance to bus stop / rail station	+++	372m ACF from the centre of the site to the nearest bus stop. 813m ACF from the centre of the site to the nearest train station.
		Sub-indicator: Frequency of Public Transport	---	Bus - less than hourly service. Train - hourly service.
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	+++	Bus - 15 minutes from Meldreth to Royston. Train - 4 minutes from Meldreth to Royston.
		Sub-indicator: Distance for cycling to City Centre or Market Town	+	5.88km ACF from the centre of the site to Royston Market.
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	0	No capacity constraints identified, safe access can be achieved.
		Will it make the transport network safer for and promote use of non-motorised modes?	0	No impact

Site No. Site 250
Address Driftwood Farm, Swavesey
Location Swavesey
Category of site Group Village
Site area 1.74

Theme	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	0	Mixed use site including residential and commercial - a small part of the site to the south west is previously developed land.
		Will it use land efficiently?		
		Will it protect and enhance the best and most versatile agricultural land?	0	Development would not affect best and most versatile agricultural land (Grades 1 and 2).
		Will it avoid the sterilisation of economic mineral reserves? Will it minimise the degradation/loss of soils due to new development?	0	Majority of site within an area designated in the Minerals and Waste LDF but development would not have a negative impact.
	Minimise waste production and support the reuse and recycling of waste products	Will it encourage reduction in household waste, and increase waste recovery and recycling?		
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	0	Development unlikely to impact on air quality. Site lies in an area where air quality acceptable.
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	0	Development compatible with neighbouring uses. Some potential for traffic noise from A14, but should be possible to mitigate.
		Will it minimise, and where possible address, land contamination?	0	A small part of the site was formerly used for agricultural / commercial use and may have contaminated land. Potential for minor benefits through remediation of minor contamination
		Will it protect and where possible enhance the quality of the water environment?	0	Assumptions for a neutral impact are that appropriate standards and pollution control measures will be achieved through the development process, e.g. as part of Sustainable Drainage Systems (Suds).
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiversity?	0	No impact on protected sites and species (or impacts could be mitigated).
	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	0	Assumptions for a neutral impact are that existing features that warrant retention can be retained or appropriate mitigation will be achieved through the development process.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process. A footpath runs along the northern boundary of the site and a bridleway lies approximately 99m to the north east.

Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	---	Significant Negative Impact (Development conflicts with landscape character, with significant negative impacts incapable of mitigation) - There are some intimate roads within the historic core, including Black Horse Lane and Taylor's Lane. The roads within the village have a predominantly rural feel with grass verges and mature hedgerows. The site is in an area described as enclosed farmland and substantial hedgerows, adjacent to the village core, which provide a transition between employment and housing areas and open farmland.
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	---	Significant Negative Impact (Development conflicts with landscape character, with significant negative impacts incapable of mitigation) - There are some intimate roads within the historic core, including Black Horse Lane and Taylor's Lane. The roads within the village have a predominantly rural feel with grass verges and mature hedgerows. The site is in an area described as enclosed farmland and substantial hedgerows, adjacent to the village core, which provide a transition between employment and housing areas and open farmland. Any required improvements to the road would substantially alter the character and appearance of this very rural part of the village. It is unlikely that access would be able to meet highway standards to provide satisfactory access, without significant harm to the character of the area.
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	---	Significant Negative Impact on historic Assets (incapable of satisfactory mitigation) - Site adjoins the 'Castle Hill', nationally designated earthworks of Swavesey Castle. Part of the site is within the Conservation Area. The site contributes to the setting of the Conservation Area and Scheduled Ancient Monument and development of this site has the potential to have a significant impact on their setting.
	Create places, spaces and buildings that work well, wear well and look good	Will it lead to developments built to a high standard of design and good place making that reflects local character?		
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	0	Standard requirements for renewables would apply.
		Will it promote energy efficiency?		
		Will it minimise contributions to climate change through sustainable construction practices?		
	Reduce vulnerability to future climate change effects	Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	0 / -	Flood Zone 1 and no drainage issues that cannot be appropriately addressed, and a very small part of the north east corner of the site is within Flood Zone 2.
Will it minimise the likely impacts of climate change on the development through appropriate design?				
Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?				

Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?		
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?		
Inclusive Communities - Housing	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	0	Neutral impact (existing features retained or appropriate mitigation). Assumption is standard requirements for open space would apply.
	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?		
		Will it provide for housing for the ageing population?		
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	No effect on pitch or plot provision.
Inclusive Communities - Redressing inequalities and involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	-	Group Village
		Sub-Indicator: Distance to centre	+++	331m ACF to The White Horse pub which is surrounded by a cluster of other services and facilities within the village.
		Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	0	No facilities lost, and no new facilities proposed directly as a result of the development.
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will improve relations between people from different backgrounds or social groups?		
		Will it redress inequalities?		
	Encourage and enable the active involvement of local people in community activities	Will it increase the ability of people to influence decisions, including 'hard to reach' groups?		
		Will it encourage engagement with community activities?	0	No facilities lost, and no new facilities proposed directly as a result of the development.
	Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	0	Development would have no effect on employment land or premises.	

Economic Activity	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	Development would have no effect on vitality or viability of existing centres. The indicator is likely to apply particularly to sites which include retail, offices, or leisure uses.
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it encourage the rural economy and diversification, and support sustainable tourism?		
		Will it contribute to providing a range of employment opportunities, in accessible locations?	+	21.37 minutes from site to nearest employment area with 2000+ employees. 2 employment areas with 2000+ employees that can be accessed in less than 30mins - 1.6km walk.
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve the level of investment in key community services and infrastructure, including broadband?	+++	Development can use existing capacity in utilities infrastructure. However, there is insufficient spare mains water capacity within the distribution zone to supply the number of proposed properties which could arise if all the SHLAA sites within the zone were to be developed. The sewerage network is approaching capacity and will require investigation and possibly mitigation
		Will it improve access to education and training, and support provision of skilled employees to the economy?	--- / -	Insufficient spare school capacity but potential for improvement to meet needs. Insufficient primary and large deficit in secondary school capacity.

Transport	Reduce the need to travel and promote more sustainable transport choices.	Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	+	Total score of 18.
		Sub-indicator: Distance to bus stop / rail station	+++	368m ACF from the centre of the site to the nearest bus stop.
		Sub-indicator: Frequency of Public Transport	-	Hourly service.
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	+	23 Minutes from Swavesey to St. Ives.
		Sub-indicator: Distance for cycling to City Centre or Market Town	+++	4.96km ACF from the centre of the site to St. Ives Market.
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	---	Minor negative effects incapable of mitigation. Access constraints - The Highway Authority has concerns in relationship to the provision of suitable inter vehicle visibility splay for this site. The proposed site does not appear to have a direct link to the adopted public highway. It is unlikely the access could be improved without significant impact rural character and historic environment. The Highways Agency comment that most of the sites identified within this group are small in-fills, closely associated with existing settlements. It is realistic to assume that a substantial proportion of such sites could be accommodated in the short to medium term but it would be difficult to see more than a quarter of the identified capacity being deliverable.
		Will it make the transport network safer for and promote use of non-motorised modes?	0	No impact.

Site No. Site 251
Address Land at Heathfield (north of Duxford Airfield)
Location Heathfield
Category of site New Settlement
Site area 60.11

Theme	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	0	No previously developed land.
		Will it use land efficiently?		
		Will it protect and enhance the best and most versatile agricultural land?	---	Significant loss (20 hectares or more) of best and most versatile agricultural land (Grades 1 and 2) - Whole site is Grade 2.
	Will it avoid the sterilisation of economic mineral reserves? Will it minimise the degradation/loss of soils due to new development?	0	Site within an area designated in the Minerals and Waste LDF but development would not have a negative impact	
Minimise waste production and support the reuse and recycling of waste products	Will it encourage reduction in household waste, and increase waste recovery and recycling?			
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	-	Development could impact on air quality, with minor negative impacts incapable of mitigation. Despite this proposal not being adjacent to an Air Quality Development compatible with some neighbouring uses. Concerns at noise from M11 which forms the eastern boundary of the site and from A505 . Residential only acceptable if high level of mitigation. Also odour from sewage treatment works and safeguarding area within Minerals and Waste LDF would impact on what parts of site could be developed Environmental Health concerned about allocating site - noise and odour constraints must be further investigated Some minor to moderate additional road traffic noise generation impact on existing residential due to development related car movements could be mitigated.
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	---/-	
		Will it minimise, and where possible address, land contamination?	+	Site is adjacent to military land and also sewage works. Would need investigation. Potential for minor benefits through remediation of minor contamination.
		Will it protect and where possible enhance the quality of the water environment?	0	Development unlikely to affect water quality. The site is partly within Groundwater Source Protection Zone 1 but majority in Zone 2 which does not rule out development but may influence land use or require pollution control measures. Assumptions for a neutral impact are that appropriate standards and pollution control measures will achieved through the development process and will mitigate any impact on groundwater,
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiversity?	0	No impact on protected sites and species (or impacts could be mitigated).
	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	0	Assumptions for a neutral impact are that existing features that warrant retention can be retained or appropriate mitigation will be achieved through the development process. Greatest impact likely to result through indirect actions such as human disturbance of woodland and loss of feeding areas for bats through habitat change as grassland is lost or light pollution affects previously dark areas.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process.
	Maintain and enhance the diversity	Will it maintain and enhance the diversity and distinctiveness of landscape character?	0	Neutral impact (generally compatible, or capable of being made compatible with local landscape character). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process.

Landscape, Townscape and Cultural Heritage	and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of townscape character?	-/---	Minor Negative Impact (development conflicts with townscape character, minor negative impacts incapable of mitigation) - the scale of the development would greatly impact on small village of Heathfield.
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	---	Significant Negative Impact on historic Assets (incapable of satisfactory mitigation) - Development of the site would significantly impact on the setting of Duxford Airfield Conservatoin Area with its collection of listed buildings. Archaeological potential will require further information but it is likely appropriate mitigation can be achieved through the development process.
	Create places, spaces and buildings that work well, wear well and look good	Will it lead to developments built to a high standard of design and good place making that reflects local character?		
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	+/+++	Development would create minor additional opportunities for renewable energy. A new settlement of this scale would be expected to include many additional renewable energy options
		Will it promote energy efficiency?		
		Will it minimise contributions to climate change through sustainable construction practices?		
	Reduce vulnerability to future climate change effects	Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	0	Flood Zone 1 and no drainage issues that cannot be appropriately addressed.
		Will it minimise the likely impacts of climate change on the development through appropriate design?		
Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?				
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?		
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?		

Inclusive Communities - Housing	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	+	Development would create minor opportunities for new public open space
	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?		
		Will it provide for housing for the ageing population?		
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	No effect on pitch or plot provision.
Inclusive Communities - Redressing inequalities and involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	-	Relatively small expansion to an infill village.
		Sub-Indicator: Distance to centre	0	Centre point of site beyond 1000m of nearest existing centre Majority of site would be within 800m of any new local centre developed as part of site.
		Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	+	New facilities or improved existing facilities are proposed of minor benefit. Promoter has indicated that the settlement will be a mixed use sustainable community.
		Will improve relations between people from different backgrounds or social groups?		
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will it redress inequalities?		
		Will it increase the ability of people to influence decisions, including 'hard to reach' groups?		
Encourage and enable the active involvement of local people in community activities	Will it encourage engagement with community activities?	+	New local community / village hall or improved existing facility is proposed of minor benefit (and is viable and sustainable). The promoter has indicated that the new settlement will be self sufficient and sustainable.	

Economic Activity		Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	+	Development would support minor additional employment opportunities. It is proposed that the new settlement be a mixed use community therefore this would mitigate the loss of employment as a result of developing the airfield site.
	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	Development would have no effect on vitality or viability of existing centres. The new settlement is proposed as being a self sufficient sustainable community.
		Will it encourage the rural economy and diversification, and support sustainable tourism?		
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it contribute to providing a range of employment opportunities, in accessible locations?	0	47.89 minutes from site to nearest employment area with 2000+ employees. No employment areas with 2000+ employees that can be accessed in less than 30mins - 1.6km walk.
		Will it improve the level of investment in key community services and infrastructure, including broadband?	-	Major utilities Infrastructure improvements required, but constraints can be addressed. There is insufficient spare mains water capacity within the distribution zone to supply the number of proposed properties which could arise if all the SHLAA sites within the zone were to be developed. The sewage network is at capacity.
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve access to education and training, and support provision of skilled employees to the economy?	-	School capacity not sufficient, but significant issues be adequately addressed

Transport	Reduce the need to travel and promote more sustainable transport choices.	Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	0	Total score of 10.
		Sub-indicator: Distance to bus stop / rail station	0	New settlement would require new bus stops which would mostly fall within 800m of the site. 857m ACF from the centre of the site to the nearest bus stop
		Sub-indicator: Frequency of Public Transport	+	New settlement would have at least a 20 minute bus service to Cambridge, equivalent to Cambourne Citi 4. Hourly Service
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	---	55 Minutes from Cambridge.
		Sub-indicator: Distance for cycling to City Centre or Market Town	0	11.48km ACF from the centre of the site to Royston Market. 11.96km ACF from the centre of the site to Cambridge Market.
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	0/-	No capacity constraints identified, safe access can be achieved. The promoter has stated that the development would result in increased bus service.
		Will it make the transport network safer for and promote use of non-motorised modes?	+	The Highway Authority will require new development to provide or contribute to the provision of infrastructure to encourage more sustainable transport links both on and off site. Provision or contribution from this site would result in minor improvement to public transport, walking or cycling facilities.

Site No. Site 252
Address Land north east of Cambridge Road (south east of Sewage Treatment Works and north west of
Location Sawston
Category of site Rural Centre
Site area 8.62

Theme	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	0	No previously developed land.
		Will it use land efficiently?		
		Will it protect and enhance the best and most versatile agricultural land?	-	Minor loss of best and most versatile agricultural land (Grades 1 and 2) - Grade 2.
		Will it avoid the sterilisation of economic mineral reserves? Will it minimise the degradation/loss of soils due to new development?	0	Small part of site within an area designated in the Minerals and Waste LDF but development would not have a negative impact
	Minimise waste production and support the reuse and recycling of waste products	Will it encourage reduction in household waste, and increase waste recovery and recycling?		
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	0	Development unlikely to impact on air quality. Site lies in an area where air quality acceptable.
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	---	All of the site is within a WWTW safeguarding Area of the Cambridgeshire & Peterborough Minerals and Waste LDF. Core Strategy policy CS31 establishes a presumption against allowing development that would be occupied by people because of the impact on amenity caused by offensive odours from the site. Where new development is proposed it must be accompanied by an odour assessment report. Development could expose residents to offensive odours with significant negative impacts incapable of adequate mitigation.
		Will it minimise, and where possible address, land contamination?	+	Potential for minor benefits through remediation of minor contamination, agricultural / farm use in south of site.
		Will it protect and where possible enhance the quality of the water environment?	0	Development unlikely to affect water quality. Assumptions for a neutral impact are that appropriate standards and pollution control measures will be achieved through the development process and will mitigate any impact on groundwater.
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiversity?	0	No impact on protected sites and species (or impacts could be mitigated).
	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	+	Minor positive impact as there are some opportunities for enhancement through for habitat linkage/enhancement/restoration – woodland to west and east, watercourses/ditches.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process.

Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	---	Significant Negative Impact (Development conflicts with landscape character, with significant negative impacts incapable of mitigation) . Development would have an adverse impact on Green Belt purposes and functions and would have a significant adverse impact on the landscape setting of Sawston by introducing built development into open fields to the north west of the village where it would adjoin Cambridge Road. The approach to the village from the north would be dominated by urban development on the site.
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	0	Neutral impact (generally compatible, or capable of being made compatible with local townscape character). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process.
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Archaeological potential will require further information but the assumption for a neutral impact is that it is likely appropriate mitigation can be achieved through the development process.
		Create places, spaces and buildings that work well, wear well and look good		
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	0	Standard requirements for renewables would apply.
		Will it promote energy efficiency?		
		Will it minimise contributions to climate change through sustainable construction practices?		
	Reduce vulnerability to future climate change effects	Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	0	Flood Zone 1 and no drainage issues that cannot be appropriately addressed.
		Will it minimise the likely impacts of climate change on the development through appropriate design?		
	Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?			
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?		
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?		

Inclusive Communities - Housing	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	0	Neutral impact (existing features retained or appropriate mitigation).
	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?		
		Will it provide for housing for the ageing population?		
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	No effect on pitch or plot provision.
Inclusive Communities - Redressing inequalities and involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	+	Rural Centre.
		Sub-Indicator: Distance to centre	---	1000m ACF from the centre of the site Sawston High Street -a cluster of services and facilities within the village.
		Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	+/0	New facilities or improved existing facilities are proposed of minor benefit. Call for Sites questionnaire refers to additional community uses such as village halls, public open space and allotments could be provided alongside the residential development proposed.
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will improve relations between people from different backgrounds or social groups?		
		Will it redress inequalities?		
		Will it increase the ability of people to influence decisions, including 'hard to reach' groups?		
	Encourage and enable the active involvement of local people in community activities	Will it encourage engagement with community activities?	+/0	No facilities lost, and no new facilities proposed directly as a result of the development. Call for Sites Questionnaire refers to potential to provide additional community facilities.

Economic Activity		Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	0	Development would have no effect on employment land or premises.
	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	Development would have no effect on vitality or viability of existing centres. The indicator is likely to apply particularly to sites which include retail, offices, or leisure uses.
		Will it encourage the rural economy and diversification, and support sustainable tourism?		
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it contribute to providing a range of employment opportunities, in accessible locations?	+	27.08 minutes from site to nearest employment area with 2000+ employees. Only 1 employment area with 2000+ employees that can be accessed in less than 30mins - 1.6km walk.
		Will it improve the level of investment in key community services and infrastructure, including broadband?	-	Minor Utilities Infrastructure improvements required, but constraints can be addressed. There is insufficient spare mains water capacity within the distribution zone to supply the number of proposed properties which could arise if all the SHLAA sites within the zone were to be developed. The sewerage network is at capacity and will require mitigation. Electricity supply is likely to require local and upstream reinforcement.
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve access to education and training, and support provision of skilled employees to the economy?	-	School capacity not sufficient, but significant issues can be adequately addressed.

Transport	Reduce the need to travel and promote more sustainable transport choices.	Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	+	Total score of 15.
		Sub-indicator: Distance to bus stop / rail station	+	481m ACF from the centre of the site to the nearest bus stop.
		Sub-indicator: Frequency of Public Transport	+	20 minute service to Cambridge. Hourly service to Saffron Walden.
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	0	39 Minutes from Sawston to Cambridge. 29 Minutes from Sawston to Saffron Walden.
		Sub-indicator: Distance for cycling to City Centre or Market Town	+	8.83km ACF from the centre of the site to Cambridge Market.
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	0	No capacity constraints identified, safe access can be achieved.
		Will it make the transport network safer for and promote use of non-motorised modes?	0	No impact

Site No. Site 253
Address Land at Gog Magog Way / Haverhill Road, Stapleford
Location Great Shelford & Stapleford
Category of site Rural Centre
Site area 0.38

Theme	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	0	No previously developed land.
		Will it use land efficiently?		
		Will it protect and enhance the best and most versatile agricultural land?	-	Minor loss of best and most versatile agricultural land (Grades 1 and 2) - small site is Grade 2.
		Will it avoid the sterilisation of economic mineral reserves? Will it minimise the degradation/loss of soils due to new development?	0	Site not within an area designated in the Minerals and Waste LDF.
	Minimise waste production and support the reuse and recycling of waste products	Will it encourage reduction in household waste, and increase waste recovery and recycling?		
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	0	Development unlikely to impact on air quality. Site lies in an area where air quality acceptable.
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	0	Development compatible with neighbouring uses.
		Will it minimise, and where possible address, land contamination?	0	Development not on land likely to be contaminated
		Will it protect and where possible enhance the quality of the water environment?	0	Development unlikely to affect water quality. Assumptions for a neutral impact are that appropriate standards and pollution control measures will be achieved through the development process. e.g. as part of Sustainable Drainage Systems (Suds).
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiversity?	0	No impact on protected sites and species (or impacts could be mitigated).
	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	0	Assumptions for a neutral impact are that existing features that warrant retention can be retained or appropriate mitigation will be achieved through the development process.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process.

Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	-	Minor Negative Impact (Development conflicts with landscape character, minor negative impacts incapable of mitigation) - The site is a part of a large arable field that is part of the open countryside on the edge of Stapleford.
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	0	Neutral impact (generally compatible, or capable of being made compatible with local townscape character). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process.
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Some loss of rural setting. Archaeological potential will require further information but the assumption for a neutral impact is that it is likely appropriate mitigation can be achieved through the development process.
	Create places, spaces and buildings that work well, wear well and look good	Will it lead to developments built to a high standard of design and good place making that reflects local character?		
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	0	Standard requirements for renewables would apply.
		Will it promote energy efficiency?		
		Will it minimise contributions to climate change through sustainable construction practices?		
	Reduce vulnerability to future climate change effects	Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	0	Flood Zone 1 and no drainage issues that cannot be appropriately addressed
		Will it minimise the likely impacts of climate change on the development through appropriate design?		
Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?				
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?		
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?		

Inclusive Communities - Housing	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	0	Neutral impact (existing features retained or appropriate mitigation).
	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?		
		Will it provide for housing for the ageing population?		
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	No effect on pitch or plot provision.
Inclusive Communities - Redressing inequalities and involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	+	Rural Centre
		Sub-Indicator: Distance to centre	---	1,690m ACF to Woollards Lane, Stapleford which is surrounded by a large number of services and facilities.
		Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	0	No facilities lost, and no new facilities proposed directly as a result of the development.
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will improve relations between people from different backgrounds or social groups?		
		Will it redress inequalities?		
		Will it increase the ability of people to influence decisions, including 'hard to reach' groups?		
	Encourage and enable the active involvement of local people in community activities	Will it encourage engagement with community activities?	0	No facilities lost, and no new facilities proposed directly as a result of the development.

Economic Activity		Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	0	Development would have no effect on employment land or premises.
	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	Development would have no effect on vitality or viability of existing centres. The indicator is likely to apply particularly to sites which include retail, offices, or leisure uses.
		Will it encourage the rural economy and diversification, and support sustainable tourism?		
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it contribute to providing a range of employment opportunities, in accessible locations?	+	16.91 minutes from site to nearest employment area with 2000+ employees. 5 employment areas with 2000+ employees that can be accessed in less than 30mins - 1.6km walk.
		Will it improve the level of investment in key community services and infrastructure, including broadband?	+	Minor Utilities Infrastructure improvements required, but constraints can be addressed. There is insufficient spare mains water capacity within the distribution zone to supply the number of proposed properties which could arise if all the SHLAA sites within the zone were to be developed. The sewage network is approaching capacity.
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve access to education and training, and support provision of skilled employees to the economy?	-	School capacity not sufficient, but significant issues can be adequately addressed

Transport	Reduce the need to travel and promote more sustainable transport choices.	Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	0	Total score of 13
		Sub-indicator: Distance to bus stop / rail station	-	78m ACF from the centre of the site to nearest bus stop (31 service). 887m ACF from the centre of the site to nearest bus stop (Citi 7 service).
		Sub-indicator: Frequency of Public Transport	+	31 service - 4 buses a day. Citi 7 - 20 minute service.
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	0	31 bus service takes 19 minutes from Shelford to Cambridge. Citi 7 bus service takes 36 minutes from Shelford to Cambridge.
		Sub-indicator: Distance for cycling to City Centre or Market Town	+	6.98km ACF from the centre of the site to Cambridge Market.
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	0	No capacity constraints identified, safe access can be achieved.
		Will it make the transport network safer for and promote use of non-motorised modes?	0	The Highway Authority will require new development to provide or contribute to the provision of infrastructure to encourage more sustainable transport links both on and off site. Provision or contribution from this site would result in minor improvement to public transport, walking or cycling facilities.

Site No. Site 255
Address Land to the East of Bush Close, Comberton
Location Comberton
Category of site Group Village
Site area 4.83

Theme	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	-	No previously developed land.
		Will it use land efficiently?		
		Will it protect and enhance the best and most versatile agricultural land?	-	Minor loss of best and most versatile agricultural land (Grades 1 and 2) - small site but all Grade 2.
	Minimise waste production and support the reuse and recycling of waste products	Will it avoid the sterilisation of economic mineral reserves? Will it minimise the degradation/loss of soils due to new development?	0	Site not within an area designated in the Minerals and Waste LDF.
		Will it encourage reduction in household waste, and increase waste recovery and recycling?		
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	0	Development unlikely to impact on air quality. Site lies in an area where air quality acceptable.
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	0	Development compatible with neighbouring uses.
	Will it minimise, and where possible address, land contamination?	0	Development not on land likely to be contaminated	
	Will it protect and where possible enhance the quality of the water environment?	0	Development unlikely to affect water quality. Assumptions for a neutral impact are that appropriate standards and pollution control measures will be achieved through the development process and will mitigate any impact on groundwater. Almost all of site included within a protection zone.	
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiversity?	0	No impact on protected sites and species (or impacts could be mitigated).
	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	0	Assumptions for a neutral impact are that existing features that warrant retention can be retained or appropriate mitigation will be achieved through the development process.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process.

Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	0	Neutral impact (generally compatible, or capable of being made compatible with local landscape character). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process. Development would have an adverse impact on Green Belt purposes regarding the setting, scale and character of Comberton by increasing the footprint of the village, and by the development of land important to the setting and character of the village. This site is screened from view by the robust hedges and tree belt adjacent to the byway which runs down the eastern edge of the site. Development would have a neutral effect on the landscape setting of Comberton. The impact of development on the Byway which extends to the south should be mitigated.
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	0	Neutral impact (generally compatible, or capable of being made compatible with local townscape character). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process.
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Archaeological potential will require further information but the assumption for a neutral impact is that it is likely appropriate mitigation can be achieved through the development process. Adverse effect on Comberton St Marys Conservation Area and setting of Church group including Church (Listed Grade I) due to the prominence of the site in the foreground in views from the footpath and land to southeast of the site. Impact could be mitigated by restricting development to the northern part of the site.
	Create places, spaces and buildings that work well, wear well and look good	Will it lead to developments built to a high standard of design and good place making that reflects local character?		
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	0	Standard requirements for renewables would apply.
		Will it promote energy efficiency?		
	Reduce vulnerability to future climate change effects	Will it minimise contributions to climate change through sustainable construction practices?		
		Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	0	Site in Flood Zone 1 and no drainage issues that cannot be appropriately addressed.
		Will it minimise the likely impacts of climate change on the development through appropriate design?		
	Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?			
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?		
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?		

Inclusive Communities - Housing	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	0	Neutral impact (existing features retained or appropriate mitigation).
	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?		
		Will it provide for housing for the ageing population?		
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	No effect on pitch or plot provision.
Inclusive Communities - Redressing inequalities and involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	-	Group Village
		Sub-Indicator: Distance to centre	0	645m from the centre of the site to the main cross roads, a central point in the village surrounded by services and facilities.
		Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	0	No facilities lost, and no new facilities proposed directly as a result of the development.
		Will improve relations between people from different backgrounds or social groups?		
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will it redress inequalities?		
		Will it increase the ability of people to influence decisions, including 'hard to reach' groups?		
	Encourage and enable the active involvement of local people in community activities	Will it encourage engagement with community activities?	0	No facilities lost, and no new facilities proposed directly as a result of the development.

Economic Activity		Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	0	Development would have no effect on employment land or premises.
	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	Development would have no effect on vitality or viability of existing centres. The indicator is likely to apply particularly to sites which include retail, offices, or leisure uses
		Will it encourage the rural economy and diversification, and support sustainable tourism?		
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it contribute to providing a range of employment opportunities, in accessible locations?	+	28.78 minutes from site to nearest employment area with 2000+ employees. Only 1 employment area with 2000+ employees that can be accessed in less than 30mins - 1.6km walk.
		Will it improve the level of investment in key community services and infrastructure, including broadband?	+	Minor Utilities Infrastructure improvements required, but constraints can be addressed. There is insufficient spare mains water capacity within the distribution zone to supply the number of proposed properties which could arise if all the SHLAA sites within the zone were to be developed. The sewerage network is at capacity and will require mitigation.
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve access to education and training, and support provision of skilled employees to the economy?	+	Insufficient spare school capacity but potential for improvement to meet needs. Current spare capacity at the local primary School. Secondary places deficit is being addressed by the construction of a new school at Cambourne to relieve Comberton VC.

Transport	Reduce the need to travel and promote more sustainable transport choices.	Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	+	Total score of 16.
		Sub-indicator: Distance to bus stop / rail station	+++	326m ACF from the centre of the site to the nearest bus stop.
		Sub-indicator: Frequency of Public Transport	-	Hourly service.
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	+	23 Minutes from Comberton to Cambridge.
		Sub-indicator: Distance for cycling to City Centre or Market Town	+	6.60km ACF from the centre of the site to Cambridge Market.
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	---	Insufficient capacity or access constraints that cannot be adequately mitigated. It is not possible to provide safe highway access to the site and it is not linked to the adopted public highway.
		Will it make the transport network safer for and promote use of non-motorised modes?	0	No impact.

Site No. Site 256
Address Land at Station Road, Over
Location Over
Category of site Group Village
Site area 1.36

Theme	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	0	No previously developed land.
		Will it use land efficiently?		
		Will it protect and enhance the best and most versatile agricultural land?	-	Minor loss of best and most versatile agricultural land (Grades 1 and 2) - small site but all Grade 2 (1.36 ha.)
		Will it avoid the sterilisation of economic mineral reserves? Will it minimise the degradation/loss of soils due to new development?	0	Part of the site within an area designated in the Minerals and Waste LDF but development would not have a negative impact.
	Minimise waste production and support the reuse and recycling of waste products	Will it encourage reduction in household waste, and increase waste recovery and recycling?		
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	0	Development unlikely to impact on air quality. Site lies in an area where air quality acceptable.
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	--- / -	Will create significant negative impacts to, or as a result of, the development, incapable of adequate mitigation. Site in close proximity to an existing skateboard park, play equipment and general recreation ground / MUGA at Over Community Centre / Recreation Ground - would require relocation of skate park. May be negative impact of flood lighting.
		Will it minimise, and where possible address, land contamination?	0	Development not on land likely to be contaminated.
		Will it protect and where possible enhance the quality of the water environment?	0	Assumptions for a neutral impact are that appropriate standards and pollution control measures will be achieved through the development process, e.g. as part of Sustainable Drainage Systems (Suds)
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiversity?	0	No impact on protected sites and species (or impacts could be mitigated). There are several groups of protected trees to the east and north east of the site
	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	0	Assumptions for a neutral impact are that existing features that warrant retention can be retained or appropriate mitigation will be achieved through the development process.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process. A byway runs along The Doles to the north east and a footpath lies to the north west and to the south west

Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	-	Minor Negative Impact (Development conflicts with landscape character, minor negative impacts incapable of mitigation) - The recreation ground and the surrounding pastureland do not form part of this urban scene relating more to the open countryside to the south and west of the site. The area is part of this rural landscape. Development of the site would have a detrimental impact on the rural character of this part of the village.
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	---	Significant Negative Impact (Development conflicts with townscape character, with significant negative impacts incapable of mitigation) - The recreation ground and the surrounding pastureland do not form part of this urban scene relating more to the open countryside to the south and west of the site. The area is part of this rural landscape. Development of the site would have a detrimental impact on the rural character of this part of the village.
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Archaeological potential will require further information but the assumption for a neutral impact is that it is likely appropriate mitigation can be achieved through the development process.
	Create places, spaces and buildings that work well, wear well and look good	Will it lead to developments built to a high standard of design and good place making that reflects local character?		
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	0	Standard requirements for renewables would apply.
		Will it promote energy efficiency?		
		Will it minimise contributions to climate change through sustainable construction practices?		
	Reduce vulnerability to future climate change effects	Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	0	Flood Zone 1 and no drainage issues that cannot be appropriately addressed.
		Will it minimise the likely impacts of climate change on the development through appropriate design?		
	Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?			
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?		
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?		

Inclusive Communities - Housing	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	0 / -	Neutral impact (existing features retained or appropriate mitigation). Assumption is standard requirements for open space would apply. Relocation of skate park away from other recreation uses.
	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?		
		Will it provide for housing for the ageing population?		
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	No effect on pitch or plot provision.
Inclusive Communities - Redressing inequalities and involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	-	Group Village
		Sub-Indicator: Distance to centre	+	417m from the centre of the site to a point along The Lanes, a central point in the village surrounded by services and facilities.
		Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	0	No facilities lost, and no new facilities proposed directly as a result of the development.
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will improve relations between people from different backgrounds or social groups?		
		Will it redress inequalities?		
		Will it increase the ability of people to influence decisions, including 'hard to reach' groups?		
	Encourage and enable the active involvement of local people in community activities	Will it encourage engagement with community activities?	0 / -	Neutral impact (existing features retained or appropriate mitigation). Assumption is standard requirements for open space would apply. Relocation of skate park away from other recreation uses.

Economic Activity		Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	0	Development would have no effect on employment land or premises.
	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	Development would have no effect on vitality or viability of existing centres. The assumption is that the local centre proposed will only be of a suitable scale to serve needs of new residents and will not impact on other centres.
		Will it encourage the rural economy and diversification, and support sustainable tourism?		
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it contribute to providing a range of employment opportunities, in accessible locations?	+	16.03 minutes from site to nearest employment area with 2000+ employees. 3 employment areas with 2000+ employees that can be accessed in less than 30mins - 1.6km walk.
		Will it improve the level of investment in key community services and infrastructure, including broadband?	+	Minor Utilities Infrastructure improvements required, but constraints can be addressed. There is insufficient spare mains water capacity within the distribution zone to supply the number of proposed properties which could arise if all the SHLAA sites within the zone were to be developed. The sewerage network is approaching capacity and will require mitigation.
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve access to education and training, and support provision of skilled employees to the economy?	-	School capacity not sufficient, but significant issues can be adequately addressed. Insufficient primary and secondary school places.

Transport	Reduce the need to travel and promote more sustainable transport choices.	Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	+	Total score of 16.
		Sub-indicator: Distance to bus stop / rail station	+++	188m ACF from the centre of the site to the nearest bus stop.
		Sub-indicator: Frequency of Public Transport	-	Hourly Service
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	+	51 minutes from Over to Cambridge; 28 minutes from Over to St. Ives
		Sub-indicator: Distance for cycling to City Centre or Market Town	+	5.69km ACF from the centre of the site to St. Ives Market.
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	0	No capacity constraints identified, safe access can be achieved. A14 capacity issues.
		Will it make the transport network safer for and promote use of non-motorised modes?	0	No impact.

Site No. Site 257
Address Land off Clive Hall Drive, Longstanton
Location Longstanton
Category of site Group Village
Site area 0.26

Theme	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	0	No previously developed land.
		Will it use land efficiently?		
		Will it protect and enhance the best and most versatile agricultural land?	0	Development would not affect best and most versatile agricultural land (Grades 1 and 2).
		Will it avoid the sterilisation of economic mineral reserves? Will it minimise the degradation/loss of soils due to new development?	0	Site within an area designated in the Minerals and Waste LDF but development would not have a negative impact.
	Minimise waste production and support the reuse and recycling of waste products	Will it encourage reduction in household waste, and increase waste recovery and recycling?		
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	0	Development unlikely to impact on air quality. Site lies in an area where air quality acceptable.
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	0	Development compatible with neighbouring uses.
		Will it minimise, and where possible address, land contamination?	0	Development not on land likely to be contaminated
		Will it protect and where possible enhance the quality of the water environment?	0	Assumptions for a neutral impact are that appropriate standards and pollution control measures will be achieved through the development process, e.g. as part of Sustainable Drainage Systems (Suds)
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiversity?	0	No impact on protected sites and species (or impacts could be mitigated).
	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	0	Assumptions for a neutral impact are that existing features that warrant retention can be retained or appropriate mitigation will be achieved through the development process.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process. A byway lies approximately 220m to the north west of the site.

Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	---	Significant Negative Impact (Development conflicts with landscape character, with significant negative impacts incapable of mitigation) - There is a clear edge to the village in this location, with Mills Lane becoming increasingly rural in character beyond Clive Hall Drive to the east. The importance of keeping this land open has been emphasised both by the Inspector considering the appeal of recent planning applications, and also by the Inspectors considering the Northstowe AAP and Site Specific Policies DPD.
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	---	Significant Negative Impact (Development conflicts with townscape character, with significant negative impacts incapable of mitigation) - There is a clear edge to the village in this location, with Mills Lane becoming increasingly rural in character beyond Clive Hall Drive to the east. The importance of keeping this land open has been emphasised both by the Inspector considering the appeal of recent planning applications, and also by the Inspectors considering the Northstowe AAP and Site Specific Policies DPD.
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	0 / -	Neutral impact (existing features retained, or appropriate mitigation possible). Within the Longstanton Conservation Area. Archaeological potential will require further information but the assumption for a neutral impact is that it is likely appropriate mitigation can be achieved through the development process.
	Create places, spaces and buildings that work well, wear well and look good	Will it lead to developments built to a high standard of design and good place making that reflects local character?		
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	0	Standard requirements for renewables would apply.
		Will it promote energy efficiency?		
		Will it minimise contributions to climate change through sustainable construction practices?		
	Reduce vulnerability to future climate change effects	Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	0	Flood Zone 1 and no drainage issues that cannot be appropriately addressed.
		Will it minimise the likely impacts of climate change on the development through appropriate design?		
	Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?			
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?		
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?		
	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	0	Neutral impact (existing features retained or appropriate mitigation). Assumption is standard requirements for open space would apply.

Inclusive Communities - Housing	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?		
		Will it provide for housing for the ageing population?		
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	No effect on pitch or plot provision.
Inclusive Communities - Redressing Inequalities and Involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	-	Group Village
		Sub-Indicator: Distance to centre	-	856m from the centre of the site to a point along Hattons Park, a central point in the village surrounded by services and facilities.
		Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	0	No facilities lost, and no new facilities proposed directly as a result of the development.
		Will improve relations between people from different backgrounds or social groups?		
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will it redress inequalities?		
		Will it increase the ability of people to influence decisions, including 'hard to reach' groups?		
Encourage and enable the active involvement of local people in community activities	Will it encourage engagement with community activities?	0	No facilities lost, and no new facilities proposed directly as a result of the development.	

Economic Activity		Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	0	Development would have no effect on employment land or premises.
	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	Development would have no effect on vitality or viability of existing centres. The assumption is that the local centre proposed will only be of a suitable scale to serve needs of new residents and will not impact on other centres.
		Will it encourage the rural economy and diversification, and support sustainable tourism?		
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it contribute to providing a range of employment opportunities, in accessible locations?	+	15.83 minutes from site to nearest employment area with 2000+ employees. 3 employment areas with 2000+ employees that can be accessed in less than 30mins - 1.6km walk.
		Will it improve the level of investment in key community services and infrastructure, including broadband?	+	Minor Utilities Infrastructure improvements required, but constraints can be addressed. There is insufficient spare mains water capacity within the distribution zone to supply the number of proposed properties which could arise if all the SHLAA sites within the zone were to be developed. The WWTW is operating close to capacity and the sewerage network is at capacity and both will require mitigation.
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve access to education and training, and support provision of skilled employees to the economy?	-	School capacity not sufficient, but significant issues can be adequately addressed. Insufficient primary and secondary school capacity.

Transport	Reduce the need to travel and promote more sustainable transport choices.	Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	0	Total score of 13.
		Sub-indicator: Distance to bus stop / rail station	+	517m ACF from the centre of the site to the nearest bus stop.
		Sub-indicator: Frequency of Public Transport	-	Hourly Service
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	0	33 minutes from Longstanton to Cambridge
		Sub-indicator: Distance for cycling to City Centre or Market Town	+	8.88km ACF from the centre of the site to Cambridge Market.
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	0	No capacity constraints identified, safe access can be achieved. A14 capacity issues.
		Will it make the transport network safer for and promote use of non-motorised modes?	0	No impact.

Site No. Site 258
Address Land south of Babraham Road, Sawston
Location Sawston
Category of site Rural Centre
Site area 4.63

Theme	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	0	No previously developed land.
		Will it use land efficiently?		
		Will it protect and enhance the best and most versatile agricultural land?	-	Minor loss of best and most versatile agricultural land (Grades 1 and 2) - Grade 2.
		Will it avoid the sterilisation of economic mineral reserves? Will it minimise the degradation/loss of soils due to new development?	0	Site not within an area designated in the Minerals and Waste LDF.
	Minimise waste production and support the reuse and recycling of waste products	Will it encourage reduction in household waste, and increase waste recovery and recycling?		
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	0	Development unlikely to impact on air quality. Site lies in an area where air quality acceptable.
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	0	Development compatible with neighbouring uses.
		Will it minimise, and where possible address, land contamination?	0	Development not on land likely to be contaminated.
		Will it protect and where possible enhance the quality of the water environment?	0	Development unlikely to affect water quality. The site within Groundwater Source Protection Zone 3 which does not rule out development but may influence land use or require pollution control measures. Assumptions for a neutral impact are that appropriate standards and pollution control measures will be achieved through the development process and will mitigate any impact on groundwater.
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiversity?	0	No impact on protected sites and species (or impacts could be mitigated).
	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	+	Minor positive impact as there are some opportunities for enhancement through the provision of hedgerows.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process.

Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	0/+	Neutral impact (generally compatible, or capable of being made compatible with local landscape character). Loss of land in Green Belt would have an adverse impact on Green Belt purposes. Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process. Development of this site has the potential to have a positive impact upon the landscape setting of Sawston provided the design makes a generous provision of land to ensure a soft green edge to the east.
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	0	Neutral impact (generally compatible, or capable of being made compatible with local townscape character). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process. Adjoins estate housing to the west.
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Archaeological potential will require further information but the assumption for a neutral impact is that it is likely appropriate mitigation can be achieved through the development process.
	Create places, spaces and buildings that work well, wear well and look good	Will it lead to developments built to a high standard of design and good place making that reflects local character?		
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	0	Standard requirements for renewables would apply.
		Will it promote energy efficiency?		
		Will it minimise contributions to climate change through sustainable construction practices?		
	Reduce vulnerability to future climate change effects	Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	0	Flood Zone 1 and no drainage issues that cannot be appropriately addressed.
		Will it minimise the likely impacts of climate change on the development through appropriate design?		
	Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?			
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?		
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?		

Inclusive Communities - Housing	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	0	Neutral impact (existing features retained or appropriate mitigation).
	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?		
		Will it provide for housing for the ageing population?		
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	No effect on pitch or plot provision.
Inclusive Communities - Redressing inequalities and involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	+	Rural Centre.
		Sub-Indicator: Distance to centre	---	1,138m ACF from the centre of the site Sawston High Street -a cluster of services and facilities within the village.
		Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	+	New facilities or improved existing facilities are proposed of minor benefit. Call for Sites questionnaire states that part of the site could be used to provide for small scale community facilities such as a Doctors Surgery and shops.
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will improve relations between people from different backgrounds or social groups?		
		Will it redress inequalities?		
		Will it increase the ability of people to influence decisions, including 'hard to reach' groups?		
	Encourage and enable the active involvement of local people in community activities	Will it encourage engagement with community activities?	+/0	No facilities lost, and no new facilities proposed directly as a result of the development. Call for Sites Questionnaire refers to potential to provide additional community facilities.

Economic Activity		Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	0	Development would have no effect on employment land or premises.
	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	Development would have no effect on vitality or viability of existing centres. The indicator is likely to apply particularly to sites which include retail, offices, or leisure uses.
		Will it encourage the rural economy and diversification, and support sustainable tourism?		
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it contribute to providing a range of employment opportunities, in accessible locations?	+	27.07 minutes from site to nearest employment area with 2000+ employees. Only 1 employment area with 2000+ employees that can be accessed in less than 30mins - 1.6km walk.
		Will it improve the level of investment in key community services and infrastructure, including broadband?	-	Minor Utilities Infrastructure improvements required, but constraints can be addressed. There is insufficient spare mains water capacity within the distribution zone to supply the number of proposed properties which could arise if all the SHLAA sites within the zone were to be developed. The sewerage network is at capacity and will require mitigation. Electricity supply is likely to require local and upstream reinforcement.
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve access to education and training, and support provision of skilled employees to the economy?	-	School capacity not sufficient, but significant issues can be adequately addressed.

Transport	Reduce the need to travel and promote more sustainable transport choices.	Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	0	Total score of 13.
		Sub-indicator: Distance to bus stop / rail station	-	857m ACF from the centre of the site to the nearest bus stop.
		Sub-indicator: Frequency of Public Transport	+	20 minute service to Cambridge. Hourly service to Saffron Walden.
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	0	39 Minutes from Sawston to Cambridge. 29 Minutes from Sawston to Saffron Walden.
		Sub-indicator: Distance for cycling to City Centre or Market Town	+	9.74km ACF from the centre of the site to Cambridge Market.
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	0	No capacity constraints identified, safe access can be achieved.
		Will it make the transport network safer for and promote use of non-motorised modes?	0	No impact

Site No. Site 259
Address Land Adjacent to 15 Priest Lane, Willingham
Location Willingham
Category of site Minor Rural Centre
Site area 0.52

Theme	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	0	No previously developed land.
		Will it use land efficiently?		
		Will it protect and enhance the best and most versatile agricultural land?	-	Minor loss of best and most versatile agricultural land (Grades 1 and 2) - small site but all Grade 2.
		Will it avoid the sterilisation of economic mineral reserves? Will it minimise the degradation/loss of soils due to new development?	0	Site not within an area designated in the Minerals and Waste LDF.
	Minimise waste production and support the reuse and recycling of waste products	Will it encourage reduction in household waste, and increase waste recovery and recycling?		
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	0	Development unlikely to impact on air quality. Site lies in an area where air quality acceptable.
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	-	Development compatible with neighbouring uses. Some minor to moderate additional road traffic noise generation impact on existing residential due to development related car movements but dependent on location of site entrance
		Will it minimise, and where possible address, land contamination?	0	Development not on land likely to be contaminated.
		Will it protect and where possible enhance the quality of the water environment?	0	Assumptions for a neutral impact are that appropriate standards and pollution control measures will be achieved through the development process, e.g. as part of Sustainable Drainage Systems (Suds).
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiversity?	0	No impact on protected sites and species (or impacts could be mitigated).
	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	0	Assumptions for a neutral impact are that existing features that warrant retention can be retained or appropriate mitigation will be achieved through the development process.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process.

Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	---	Significant Negative Impact (Development conflicts with landscape character, with significant negative impacts incapable of mitigation) - Nearer to Willingham, the setting is more enclosed with smaller fields, paddocks, horticulture, orchards, glasshouses and a caravan park. These transition areas between the village and more open Fen Edge landscape beyond form an intricate patchwork setting and also contain numerous trees along hedgelines and in groups. The site forms part of the 'transition' area between the village and the open countryside, on ground slightly higher than the adjacent property, which would therefore make any development of this site very visible from the north and to some extent from the east. The site is rural in character.
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	---	Significant Negative Impact (Development conflicts with townscape character, with significant negative impacts incapable of mitigation) - The village has a very skeleton road framework formed from the historic background of horticulture which has led to considerable linear development within the village. Development of this site is incompatible with the linear street pattern characteristic of approach roads into Willingham, creating an area of backland development in an area characterised by ribbon development, having a detrimental impact on the character of this part of the village.
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	-	Minor Negative Impact on historic Assets (incapable of satisfactory mitigation) – Potential adverse effect on the setting of the Conservation Area due to intensification of lane at entrance to Conservation Area. Several Grade II Listed Buildings within the Conservation Area. Archaeological potential will require further information but the assumption for a neutral impact is that it is likely appropriate mitigation can be achieved through the development process.
	Create places, spaces and buildings that work well, wear well and look good	Will it lead to developments built to a high standard of design and good place making that reflects local character?		
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	0	Standard requirements for renewables would apply.
		Will it promote energy efficiency?		
		Will it minimise contributions to climate change through sustainable construction practices?		
	Reduce vulnerability to future climate change effects	Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	0	Flood Zone 1 and no drainage issues that cannot be appropriately addressed.
		Will it minimise the likely impacts of climate change on the development through appropriate design?		
Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?				

Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?		
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?		
Inclusive Communities - Housing	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	0	Neutral impact (existing features retained or appropriate mitigation).
	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?		
		Will it provide for housing for the ageing population?		
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	No effect on pitch or plot provision.
Inclusive Communities - Redressing inequalities and involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	0	Minor Rural Centre
		Sub-Indicator: Distance to centre	0	740m ACF to the High Street - location chosen as representation of central point of these services and facilities.
		Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	0	No facilities lost, and no new facilities proposed directly as a result of the development.
		Will improve relations between people from different backgrounds or social groups?		
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will it redress inequalities?		
		Will it increase the ability of people to influence decisions, including 'hard to reach' groups?		
	Encourage and enable the active involvement of local people in community activities	Will it encourage engagement with community activities?	0	No facilities lost, and no new facilities proposed directly as a result of the development.
	Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	0	Development would have no effect on employment land or premises	

Economic Activity	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	Development would have no effect on vitality or viability of existing centres. The indicator is likely to apply particularly to sites which include retail, offices, or leisure uses.
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it encourage the rural economy and diversification, and support sustainable tourism?		
		Will it contribute to providing a range of employment opportunities, in accessible locations?	+	21.75 minutes from site to nearest employment area with 2000+ employees. 3 employment areas with 2000+ employees can be accessed in less than 30mins - 1.6km walk.
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve the level of investment in key community services and infrastructure, including broadband?	+++	Development can use existing capacity in utilities infrastructure. However, the sewerage network is approaching capacity and will require investigation and possibly mitigation.
		Will it improve access to education and training, and support provision of skilled employees to the economy?	-	Insufficient spare school capacity but potential for improvement to meet needs. Insufficient secondary school capacity.

Transport		Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	0	Total score of 13
	Reduce the need to travel and promote more sustainable transport choices.	Sub-indicator: Distance to bus stop / rail station	+	525m ACF from the centre of the site to nearest bus stop (Citi 5).
		Sub-indicator: Frequency of Public Transport	-	Citi 5 has an hourly service.
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	0	Citi 5 Bus service takes 41 minutes from Willingham to Cambridge. Citi 5 Bus service takes 38 minutes from Willingham to St. Ives.
		Sub-indicator: Distance for cycling to City Centre or Market Town	+	9.60km ACF from the centre of the site to St. Ives Market.
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	--- / -	Insufficient capacity or access constraints that cannot be adequately mitigated. The Highways Agency comment that this site is in an area heavily reliant on the A14 for strategic access. It is difficult to see more than a small proportion of these sites being deliverable prior to major improvements to the A14, and even this could require substantial mitigation measures.
		Will it make the transport network safer for and promote use of non-motorised modes?	0	No impact.

Site No. Site 260
Address Land at Oakington Road, Cottenham
Location Cottenham
Category of site Minor Rural Centre
Site area 4.9

Theme	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	0	No previously developed land.
		Will it use land efficiently?		
		Will it protect and enhance the best and most versatile agricultural land?	-	Minor loss of best and most versatile agricultural land (Grades 1 and 2) - small site but all Grade 1.
		Will it avoid the sterilisation of economic mineral reserves? Will it minimise the degradation/loss of soils due to new development?	0	Site not within an area designated in the Minerals and Waste LDF.
	Minimise waste production and support the reuse and recycling of waste products	Will it encourage reduction in household waste, and increase waste recovery and recycling?		
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	0	Development unlikely to impact on air quality. Site lies in an area where air quality acceptable.
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	-	Development compatible with neighbouring uses. Some minor to moderate additional road traffic noise generation impact on existing residential due to development related car movements but dependent on location of site entrance.
		Will it minimise, and where possible address, land contamination?	0	Development not on land likely to be contaminated
		Will it protect and where possible enhance the quality of the water environment?	0	Assumptions for a neutral impact are that appropriate standards and pollution control measures will be achieved through the development process, e.g. as part of Sustainable Drainage Systems (Suds).
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiversity?	0	No impact on protected sites and species (or impacts could be mitigated).
	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	0	Assumptions for a neutral impact are that existing features that warrant retention can be retained or appropriate mitigation will be achieved through the development process.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process.

Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	-	Minor Negative Impact (Development conflicts with landscape character, minor negative impacts incapable of mitigation) - The site is very exposed to views across the flat, arable land of the Green Belt to the south, which is open to the Oakington Road frontage. The site has a rural character, and creates a soft edge at this entrance to the village. Development of this site, with its long plot depth would result in a cul-de-sac that is out of character with the rest of Cottenham and thus have a detrimental impact on the character of this linear approach to the village.
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	-	Minor Negative Impact (development conflicts with townscape character, minor negative impacts incapable of mitigation) - incompatible with linear street pattern characteristic of approach roads into Cottenham.
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Archaeological potential will require further information but the assumption for a neutral impact is that it is likely appropriate mitigation can be achieved through the development process.
		Create places, spaces and buildings that work well, wear well and look good		
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	0	Standard requirements for renewables would apply.
		Will it promote energy efficiency?		
		Will it minimise contributions to climate change through sustainable construction practices?		
	Reduce vulnerability to future climate change effects	Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	0	Flood Zone 1 and no drainage issues that cannot be appropriately addressed.
		Will it minimise the likely impacts of climate change on the development through appropriate design?		
	Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?			
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?		
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?		

Inclusive Communities - Housing	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	0	Neutral impact (existing features retained or appropriate mitigation).
	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?		
		Will it provide for housing for the ageing population?		
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	No effect on pitch or plot provision.
Inclusive Communities - Redressing inequalities and involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	0	Minor Rural Centre
		Sub-Indicator: Distance to centre	---	1,001m from the centre of the site to a point along the High Street / B1049. Services and facilities run a long way along Cottenham High Street
		Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	0	No facilities lost, and no new facilities proposed directly as a result of the development.
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will improve relations between people from different backgrounds or social groups?		
		Will it redress inequalities?		
		Will it increase the ability of people to influence decisions, including 'hard to reach' groups?		
	Encourage and enable the active involvement of local people in community activities	Will it encourage engagement with community activities?	0	No facilities lost, and no new facilities proposed directly as a result of the development.

Economic Activity		Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	0	Development would have no effect on employment land or premises.
	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	Development would have no effect on vitality or viability of existing centres. The indicator is likely to apply particularly to sites which include retail, offices, or leisure uses.
		Will it encourage the rural economy and diversification, and support sustainable tourism?		
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it contribute to providing a range of employment opportunities, in accessible locations?	+	24.90 minutes from site to nearest employment area with 2000+ employees. Only 1 employment area with 2000+ employees that can be accessed in less than 30mins - 1.6km walk.
		Will it improve the level of investment in key community services and infrastructure, including broadband?	+++ / +	Development can use existing capacity in utilities infrastructure. However, there is insufficient spare mains water capacity within the distribution zone to supply the number of proposed properties which could arise if all the SHLAA sites within the zone were to be developed. The sewerage network is approaching capacity and will require investigation and possibly mitigation.
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve access to education and training, and support provision of skilled employees to the economy?	+	Insufficient spare school capacity but potential for improvement to meet needs. Insufficient secondary school capacity.

Transport	Reduce the need to travel and promote more sustainable transport choices.	Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	+	Total score of 17.
		Sub-indicator: Distance to bus stop / rail station	+++	364m ACF from the centre of the site to the nearest bus stop.
		Sub-indicator: Frequency of Public Transport	+	20 Minute Service.
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	0	37 Minutes from Cottenham to Cambridge.
		Sub-indicator: Distance for cycling to City Centre or Market Town	+	8.64km ACF from the centre of the site to Cambridge Market.
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	0	No capacity constraints identified, safe access can be achieved. Assumption is that a fairly large proportion of trips might reasonably be accommodated by the A14, but limitations on the county's network could result in localised diversionary trips on the A14 and M11 and this in turn may limit the capacity of these routes to accommodate new development. Conversely, these settlements are reasonably likely to be able to be served by public transport or non-motorised modes.
		Will it make the transport network safer for and promote use of non-motorised modes?	+	The Highway Authority will require new development to provide or contribute to the provision of infrastructure to encourage more sustainable transport links both on and off site. Provision or contribution from this site would result in minor improvement to public transport, walking or cycling facilities.

Site No. Site 261
Address Land at Barrington Quarry
Location Barrington
Category of site New Settlement
Site area 402.83

Theme	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	+	Approximately a third of the site is a former quarry and cement works - this is previously developed land / the rest is farmland
		Will it use land efficiently?		
		Will it protect and enhance the best and most versatile agricultural land?	---	Significant loss (20 hectares or more) of best and most versatile agricultural land (Grades 1 and 2) - Majority of very large site is Grade 2 but a belt of Grade 3 runs through the middle of the site where the chalk is underlying.
	Minimise waste production and support the reuse and recycling of waste products	Will it avoid the sterilisation of economic mineral reserves? Will it minimise the degradation/loss of soils due to new development?	-	Site falls within a designated area in the Minerals and Waste LDF, development would have minor negative impacts on identified Minerals Reserves. Site allocation for chalk adjacent to existing quarry area. Around existing quarry and allocation is a waste consultation area. A quarter of the site is a safeguarding area for chalk in the Minerals and Waste LDF.
Will it encourage reduction in household waste, and increase waste recovery and recycling?				
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	-	Development could impact on air quality, with minor negative impacts incapable of mitigation. Despite this proposal not being adjacent to an Air Quality
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	-	Development compatible with some neighbouring uses. Concerns at noise from adjoining Barrington Hall that has entertainment events - could mitigate since very large site by having buffer to protect residential uses on site from noise. Also concerns at noise and malodour from nearby farms - bringing this closer to residential areas - need for buffer zones. Some minor to moderate additional road traffic noise generation impact on existing residential due to development related car movements could be mitigated.
		Will it minimise, and where possible address, land contamination?	+	Eastern part of site is a former quarry and also has a number of areas of filled land. The whole site would therefore require investigation. This could be dealt with by condition.. Potential for minor benefits through remediation of minor contamination.
		Will it protect and where possible enhance the quality of the water environment?	0	Assumptions for a neutral impact are that appropriate standards and pollution control measures will be achieved through the development process, e.g. as part of Sustainable Drainage Systems (Suds).
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiversity?	- / ---	Minor negative impact on protected sites and species incapable of mitigation. A quarter of the site is an SSSI for geological importance. Could be significant but given overall size of site could design to mitigate damage to SSSI. Promoters indicate that they would work with Natural England and University of Cambridge and Natural History Museum to protect future of SSSI.
	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	-/0	Minor Negative Impact (Existing features unlikely to be retained in their entirety, impacts cannot be fully mitigated) Some mitigation will be achieved through the development process. Greatest impact likely to be upon woodland habitats through disturbance and general change of use from unmanaged to amenity. Many groups of trees and mature hedgerows would need to be retained within design. Extensive loss of arable farmland.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	+	Development would create minor opportunities for new Green Infrastructure. Promoters have mentioned that a new country park would be included in the development of the site.

Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	---	Significant Negative Impact (Development conflicts with landscape character, with significant negative impacts incapable of mitigation) - the site is prominently located on edge of Barrington. Development of this site would be very intrusive. Huge views are available to the north, east and south of the site. It is a dramatic landscape, and deeply rural in character.
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	-	Minor Negative Impact (development conflicts with townscape character, minor negative impacts incapable of mitigation). All local villages would be totally dominated by the scale of the development. Barrington and Orwell could become physically linked.
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	---/--	Significant Negative Impact on historic Assets (incapable of satisfactory mitigation) - Setting of four conservation areas would be affected by development of this site. Southern boundary of site adjoins Barrington Conservation Area. Archaeological potential will require further information but the assumption for a neutral impact is that it is likely appropriate mitigation can be achieved through the development process.
	Create places, spaces and buildings that work well, wear well and look good	Will it lead to developments built to a high standard of design and good place making that reflects local character?		
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	+ /+++	Development would create minor additional opportunities for renewable energy. A new settlement of this scale would be expected to include many additional renewable energy options
		Will it promote energy efficiency?		
		Will it minimise contributions to climate change through sustainable construction practices?		
	Reduce vulnerability to future climate change effects	Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	0	Flood Zone 1 and no drainage issues that cannot be appropriately addressed. Very small part of site is within flood zone 2.
Will it minimise the likely impacts of climate change on the development through appropriate design?				
Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?				
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?		
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?		

Inclusive Communities - Housing	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	++++	Development would deliver significant new public open space. Promoter has indicated that a country park would be delivered with formal and informal recreation facilities to serve the southern and western part of the district.
	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?		
		Will it provide for housing for the ageing population?		
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	No effect on pitch or plot provision.
Inclusive Communities - Redressing inequalities and involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	+	New settlement - Promoter describes as being sustainable new development.
		Sub-Indicator: Distance to centre	0	Centre point of site beyond 1000m of nearest existing centre Majority of site would be within 800m of any new local centre developed as part of site.
		Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	+	New facilities or improved existing facilities are proposed of minor benefit. Promoter has indicated that the settlement will be a sustainable new development and also that it will be providing facilities for those that live in close proximity to the new community.
		Will improve relations between people from different backgrounds or social groups?		
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will it redress inequalities?		
		Will it increase the ability of people to influence decisions, including 'hard to reach' groups?		
Encourage and enable the active involvement of local people in community activities	Will it encourage engagement with community activities?	+	New local community / village hall or improved existing facility is proposed of minor benefit (and is viable and sustainable). The promoter has indicated that the new settlement will be sustainable community providing for the day to day needs of the residents.	

Economic Activity		Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	-/0	Development would have a minor negative effect on employment opportunities, as a result of the loss of existing employment land. The existing quarry and cement works are no longer in commercial use however the Minerals and Waste LDF has retained an allocation for chalk within the site and therefore the quarry could at a future date become operational again. Development of the site would prevent this.
	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	Development would have no effect on vitality or viability of existing centres. The new settlement is proposed as being a self sufficient sustainable community.
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it encourage the rural economy and diversification, and support sustainable tourism?		
		Will it contribute to providing a range of employment opportunities, in accessible locations?	0	44.22 minutes from site to nearest employment area with 2000+ employees. No employment areas with 2000+ employees that can be accessed in less than 30mins - 1.6km walk.
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve the level of investment in key community services and infrastructure, including broadband?	-	Major utilities Infrastructure improvements required, but constraints can be addressed. There is insufficient spare mains water capacity within the distribution zone to supply the number of proposed properties which could arise if all the SHLAA sites within the zone were to be developed. The sewage network is limited capacity. The electricity supply to be development could not be supported from existing network.
		Will it improve access to education and training, and support provision of skilled employees to the economy?	-	School capacity not sufficient, but significant issues be adequately addressed

Transport	Reduce the need to travel and promote more sustainable transport choices.	Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	0	Total score of 14.
		Sub-indicator: Distance to bus stop / rail station	0	New settlement would require new bus stops which would mostly fall within 800m of the site. 1,277m ACF from the centre of the site to the nearest bus stop (75 service)
		Sub-indicator: Frequency of Public Transport	+	New settlement would have at least a 20 minute bus service to Cambridge, equivalent to Cambourne Citi 4. Less than hourly service.
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	+	30 minutes from bus stop to the centre of Cambridge.
		Sub-indicator: Distance for cycling to City Centre or Market Town	0	10.03km ACF from the centre of the site to Cambridge Market.
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	0/-	No capacity constraints identified, safe access can be achieved however local traffic management measures would be required to mitigate the impact of development traffic upon local communities.
		Will it make the transport network safer for and promote use of non-motorised modes?	+	The Highway Authority will require new development to provide or contribute to the provision of infrastructure to encourage more sustainable transport links both on and off site. Provision or contribution from this site would result in minor improvement to public transport, walking or cycling facilities. The promoter has stated that the transport strategy will include a fast, frequent and direct public transport connection to Cambridge. Currently limited bus service and highway Authority has stated that it would be difficult to incorporate into existing networks.

Site No. Site 262
Address Land at Hinton Way, Stapleford
Location Great Shelford & Stapleford
Category of site Rural Centre
Site area 1.21

Theme	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	0	No previously developed land.
		Will it use land efficiently?		
		Will it protect and enhance the best and most versatile agricultural land?	0	Development would not affect the best and most versatile agricultural land (Grades 1 and 2).
		Will it avoid the sterilisation of economic mineral reserves? Will it minimise the degradation/loss of soils due to new development?	0	Site not within an area designated in the Minerals and Waste LDF.
	Minimise waste production and support the reuse and recycling of waste products	Will it encourage reduction in household waste, and increase waste recovery and recycling?		
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	0	Development unlikely to impact on air quality. Site lies in an area where air quality acceptable.
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	0	Development compatible with neighbouring uses.
		Will it minimise, and where possible address, land contamination?	0	Development not on land likely to be contaminated.
		Will it protect and where possible enhance the quality of the water environment?	0	Development unlikely to effect water quality. Assumptions for a neutral impact are that appropriate standards and pollution control measures will be achieved through the development process, e.g. as part of Sustainable Drainage Systems (SuDS).
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiversity?	0	No impact on protected sites and species (or impacts could be mitigated).
	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	0/-	Assumptions for a neutral impact are that existing features that warrant retention can be retained or appropriate mitigation will be achieved through the development process.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process.

Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	---	Significant Negative Impact (development conflicts with landscape character, significant negative impacts incapable of mitigation) - development of this site would result in further encroachment of the built area into the strongly rolling chalk hills rising from the village edge.
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	-	Minor Negative Impact (development conflicts with townscape character, minor negative impacts incapable of mitigation) - development of this site would change the agricultural character of this area of village.
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	0/-	Neutral impact (existing features retained, or appropriate mitigation possible). Archaeological potential will require further information but the assumption for a neutral impact is that it is likely appropriate mitigation can be achieved through the development process.
	Create places, spaces and buildings that work well, wear well and look good	Will it lead to developments built to a high standard of design and good place making that reflects local character?		
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	0	Standard requirements for renewables would apply.
		Will it promote energy efficiency?		
		Will it minimise contributions to climate change through sustainable construction practices?		
	Reduce vulnerability to future climate change effects	Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	0	Flood Zone 1 and no drainage issues that cannot be appropriately addressed.
		Will it minimise the likely impacts of climate change on the development through appropriate design?		
		Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?		
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?		
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?		

Inclusive Communities - Housing	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	0	Neutral impact (existing features retained or appropriate mitigation).
	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?		
		Will it provide for housing for the ageing population?		
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	No effect on pitch or plot provision.
Inclusive Communities - Redressing inequalities and involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	+	Rural Centre.
		Sub-Indicator: Distance to centre	---	1,662m ACF to Woollards Lane, Stapleford which is surrounded by a large number of services and facilities.
		Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	0	No facilities lost, and no new facilities proposed directly as a result of the development.
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will improve relations between people from different backgrounds or social groups?		
		Will it redress inequalities?		
		Will it increase the ability of people to influence decisions, including 'hard to reach' groups?		
	Encourage and enable the active involvement of local people in community activities	Will it encourage engagement with community activities?	0	No facilities lost, and no new facilities proposed directly as a result of the development.

Economic Activity		Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	0	Development would have no effect on employment land or premises.
	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	Development would have no effect on vitality or viability of existing centres. The indicator is likely to apply particularly to sites which include retail, offices, or leisure uses.
		Will it encourage the rural economy and diversification, and support sustainable tourism?		
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it contribute to providing a range of employment opportunities, in accessible locations?	+	17.15 minutes from site to nearest employment area with 2000+ employees. 5 employment areas with 2000+ employees that can be accessed in less than 30mins - 1.6km walk.
		Will it improve the level of investment in key community services and infrastructure, including broadband?	+	Minor utilities infrastructure improvements required, but constraints can be addressed. There is insufficient spare mains water capacity within the distribution zone to supply the number of proposed properties which could arise if all the SHLAA sites within the zone were to be developed. The sewerage network is approaching capacity.
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve access to education and training, and support provision of skilled employees to the economy?	-	School capacity not sufficient, but significant issues can be adequately addressed.

Transport	Reduce the need to travel and promote more sustainable transport choices.	Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	+	Total score of 16.
		Sub-indicator: Distance to bus stop / rail station	+++	148m ACF from the centre of the site to nearest bus stop (31 service). 1,277m ACF from the centre of the site to nearest bus stop (Citi 7). 1,175m ACF from the centre of the site to train station.
		Sub-indicator: Frequency of Public Transport	---	31 bus has a less than hourly service. Citi 7 bus has a 20 minute service. Train has an 30 minute to hourly service.
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	+++	31 bus service takes 19 minutes from Shelford to Cambridge. Citi 7 bus service takes 33 minutes from Great Shelford to Cambridge. Train service takes 5-11 minutes from Great Shelford to Cambridge.
		Sub-indicator: Distance for cycling to City Centre or Market Town	+	5.94km ACF from the centre of the site to Cambridge Market.
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	0	No capacity constraints identified, safe access can be achieved.
		Will it make the transport network safer for and promote use of non-motorised modes?	+	The Highway Authority will require new development to provide or contribute to the provision of infrastructure to encourage more sustainable transport links both on and off site. Provision or contribution from this site would result in minor improvement to public transport, walking or cycling facilities.

Site No. Site 263
Address Land to the rear of 34 - 46 Histon Road, Cottenham
Location Cottenham
Category of site Minor Rural Centre
Site area 1.04

Theme	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	0	No previously developed land.
		Will it use land efficiently?		
		Will it protect and enhance the best and most versatile agricultural land?	-	Minor loss of best and most versatile agricultural land (Grades 1 and 2) - small site but all Grade 1.
		Will it avoid the sterilisation of economic mineral reserves? Will it minimise the degradation/loss of soils due to new development?	0	Site not within an area designated in the Minerals and Waste LDF.
	Minimise waste production and support the reuse and recycling of waste products	Will it encourage reduction in household waste, and increase waste recovery and recycling?		
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	0	Development unlikely to impact on air quality. Site lies in an area where air quality acceptable.
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	-	Development compatible with neighbouring uses. Some minor to moderate additional road traffic noise generation impact on existing residential due to development related car movements but dependent on location of site entrance.
		Will it minimise, and where possible address, land contamination?	0	Development not on land likely to be contaminated.
		Will it protect and where possible enhance the quality of the water environment?	0	Assumptions for a neutral impact are that appropriate standards and pollution control measures will be achieved through the development process, e.g. as part of Sustainable Drainage Systems (Suds).
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiversity?	0	No impact on protected sites and species (or impacts could be mitigated).
	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	0	Assumptions for a neutral impact are that existing features that warrant retention can be retained or appropriate mitigation will be achieved through the development process.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process.

Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	-	Minor Negative Impact (Development conflicts with landscape character, minor negative impacts incapable of mitigation) - The character of this part of the village is linear, with long rear gardens. Development of this site would create a large area of residential development in a cul-de-sac, in a prominent location, which would alter the current rural character and setting of the village and impact on the purposes and function of the Green Belt in this location.
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	-	Minor Negative Impact (development conflicts with townscape character, minor negative impacts incapable of mitigation) - The character of this part of the village is linear, with long rear gardens. Development of this site would create a large area of residential development in a cul-de-sac, in a prominent location, which would alter the character of this largely ribbon part of the settlement.
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Archaeological potential will require further information but the assumption for a neutral impact is that it is likely appropriate mitigation can be achieved through the development process.
	Create places, spaces and buildings that work well, wear well and look good	Will it lead to developments built to a high standard of design and good place making that reflects local character?		
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	0	Standard requirements for renewables would apply.
		Will it promote energy efficiency?		
		Will it minimise contributions to climate change through sustainable construction practices?		
	Reduce vulnerability to future climate change effects	Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	0	Flood Zone 1 and no drainage issues that cannot be appropriately addressed.
		Will it minimise the likely impacts of climate change on the development through appropriate design?		
	Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?			
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?		
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?		

Inclusive Communities - Housing	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	0	Neutral impact (existing features retained or appropriate mitigation).
	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?		
		Will it provide for housing for the ageing population?		
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	No effect on pitch or plot provision.
Inclusive Communities - Redressing inequalities and involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	0	Minor Rural Centre
		Sub-Indicator: Distance to centre	-	861m from the centre of the site to a point along the High Street / B1049. Services and facilities run a long way along Cottenham High Street
		Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	0	No facilities lost, and no new facilities proposed directly as a result of the development.
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will improve relations between people from different backgrounds or social groups?		
		Will it redress inequalities?		
		Will it increase the ability of people to influence decisions, including 'hard to reach' groups?		
Encourage and enable the active involvement of local people in community activities	Will it encourage engagement with community activities?	0	No facilities lost, and no new facilities proposed directly as a result of the development.	

Economic Activity		Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	0	Development would have no effect on employment land or premises.
	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	Development would have no effect on vitality or viability of existing centres. The indicator is likely to apply particularly to sites which include retail, offices, or leisure uses.
		Will it encourage the rural economy and diversification, and support sustainable tourism?		
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it contribute to providing a range of employment opportunities, in accessible locations?	+	18.82 minutes from site to nearest employment area with 2000+ employees. Only 1 employment area with 2000+ employees that can be accessed in less than 30mins - 1.6km walk.
		Will it improve the level of investment in key community services and infrastructure, including broadband?	+++ / +	Development can use existing capacity in utilities infrastructure. However, there is insufficient spare mains water capacity within the distribution zone to supply the number of proposed properties which could arise if all the SHLAA sites within the zone were to be developed. The sewerage network is approaching capacity and will require investigation and possibly mitigation.
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve access to education and training, and support provision of skilled employees to the economy?	+	Insufficient spare school capacity but potential for improvement to meet needs. Insufficient secondary school capacity.

Transport	Reduce the need to travel and promote more sustainable transport choices.	Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	+	Total score of 17.
		Sub-indicator: Distance to bus stop / rail station	+++	269m ACF from the centre of the site to the nearest bus stop.
		Sub-indicator: Frequency of Public Transport	+	20 Minute Service.
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	0	37 Minutes from Cottenham to Cambridge.
		Sub-indicator: Distance for cycling to City Centre or Market Town	+	8.64km ACF from the centre of the site to Cambridge Market.
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	0	No capacity constraints identified, safe access can be achieved. Assumption is that a fairly large proportion of trips might reasonably be accommodated by the A14, but limitations on the county's network could result in localised diversionary trips on the A14 and M11 and this in turn may limit the capacity of these routes to accommodate new development. Conversely, these settlements are reasonably likely to be able to be served by public transport or non-motorised modes.
		Will it make the transport network safer for and promote use of non-motorised modes?	0	No impact.

Site No. Site 264
Address 80a High Street, Meldreth
Location Meldreth
Category of site Group Village
Site area 0.3

Theme	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	0	No previously developed land.
		Will it use land efficiently?		
		Will it protect and enhance the best and most versatile agricultural land?	-	Minor loss of best and most versatile agricultural land (Grades 1 and 2) - Grade 2.
		Will it avoid the sterilisation of economic mineral reserves? Will it minimise the degradation/loss of soils due to new development?	0	Site not within an area designated in the Minerals and Waste LDF.
	Minimise waste production and support the reuse and recycling of waste products	Will it encourage reduction in household waste, and increase waste recovery and recycling?		
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	0	Development unlikely to impact on air quality. Site lies in an area where air quality acceptable.
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	---	All of the site is within a WWTW safeguarding Area of the Cambridgeshire & Peterborough Minerals and Waste LDF. Core Strategy policy CS31 establishes a presumption against allowing development that would be occupied by people because of the impact on amenity caused by offensive odours from the site. Where new development is proposed it must be accompanied by an odour assessment report. Development could expose residents to offensive odours with significant negative impacts incapable of adequate mitigation.
		Will it minimise, and where possible address, land contamination?	+	Potential for minor benefits through remediation of minor contamination. Record of commercial/industrial use, can be conditioned
		Will it protect and where possible enhance the quality of the water environment?	0	Development unlikely to affect water quality. Assumptions for a neutral impact are that appropriate standards and pollution control measures will be achieved through the development process and will mitigate any impact on groundwater.
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiversity?	0	No impact on protected sites and species (or impacts could be mitigated).
	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	0	Assumptions for a neutral impact are that existing features that warrant retention can be retained or appropriate mitigation will be achieved through the development process.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process.

Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	-	Minor Negative Impact (Development conflicts with landscape character, minor negative impacts incapable of mitigation. Development of this site would have an adverse effect on the landscape character of the village by eroding the contrast between the linear development along the High Street frontage and the undeveloped land to the rear along the river Mel.
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	-	Minor Negative Impact (development conflicts with townscape character, minor negative impacts incapable of mitigation) - Development of this site would have an adverse effect on the townscape character of the village by eroding the contrast between the linear development along the High Street frontage and the undeveloped land to the rear along the river Mel.
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Archaeological potential will require further information but the assumption for a neutral impact is that it is likely appropriate mitigation can be achieved through the development process.
	Create places, spaces and buildings that work well, wear well and look good	Will it lead to developments built to a high standard of design and good place making that reflects local character?		
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	0	Standard requirements for renewables would apply.
		Will it promote energy efficiency?		
		Will it minimise contributions to climate change through sustainable construction practices?		
	Reduce vulnerability to future climate change effects	Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	0	Flood Zone 1 and no drainage issues that cannot be appropriately addressed. Very small part of site in zone 3.
		Will it minimise the likely impacts of climate change on the development through appropriate design?		
Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?				
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?		
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?		

Inclusive Communities - Housing	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	0	Neutral impact (existing features retained or appropriate mitigation).
	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?		
		Will it provide for housing for the ageing population?		
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	No effect on pitch or plot provision.
Inclusive Communities - Redressing inequalities and involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	-	Group Village
		Sub-Indicator: Distance to centre	+++	218m from the centre of the site to the village hall which is surrounded by a cluster of other services and facilities.
		Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	0	No facilities lost, and no new facilities proposed directly as a result of the development.
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will improve relations between people from different backgrounds or social groups?		
		Will it redress inequalities?		
		Will it increase the ability of people to influence decisions, including 'hard to reach' groups?		
	Encourage and enable the active involvement of local people in community activities	Will it encourage engagement with community activities?	0	No facilities lost, and no new facilities proposed directly as a result of the development.

Economic Activity		Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	0	Development would have no effect on employment land or premises.
	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	Development would have no effect on vitality or viability of existing centres. The indicator is likely to apply particularly to sites which include retail, offices, or leisure uses.
		Will it encourage the rural economy and diversification, and support sustainable tourism?		
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it contribute to providing a range of employment opportunities, in accessible locations?	+++	6.66 minutes from site to nearest employment area with 2000+ employees. 2 employment areas with 2000+ employees can be accessed in less than 30mins - 1.6km walk.
		Will it improve the level of investment in key community services and infrastructure, including broadband?	-	Minor Utilities Infrastructure improvements required, but constraints can be addressed. There is insufficient spare mains water capacity within the distribution zone to supply the number of proposed properties which could arise if all the SHLAA sites within the zone were to be developed. The WWTW is operating close to capacity and the sewerage network is at capacity and both will require mitigation.
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve access to education and training, and support provision of skilled employees to the economy?	-	School capacity not sufficient, but significant issues can be adequately addressed.

Transport	Reduce the need to travel and promote more sustainable transport choices.	Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	+	Total score of 16.
		Sub-indicator: Distance to bus stop / rail station	+++	109m ACF from the centre of the site to the nearest bus stop. 555m ACF from the centre of the site to the nearest train station.
		Sub-indicator: Frequency of Public Transport	---	Bus - less than hourly service. Train - hourly service.
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	+++	Bus - 15 minutes from Meldreth to Royston. Train - 4 minutes from Meldreth to Royston.
		Sub-indicator: Distance for cycling to City Centre or Market Town	+	5.91km ACF from the centre of the site to Royston Market.
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	0	No capacity constraints identified, it should be possible to gain safe access.
		Will it make the transport network safer for and promote use of non-motorised modes?	0	No impact

Site No. Site 265
Address Land to the north of the A428, Cambourne
Location countryside
Category of site New Settlement
Site area 271.65

Theme	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	0	The site includes 2 farm complexes creating a very small area of previously developed land.
		Will it use land efficiently?		
		Will it protect and enhance the best and most versatile agricultural land?	---	Significant loss (20 hectares or more) of best and most versatile agricultural land (Grades 1 and 2) - the whole site is Grade 2 (over 270 ha).
		Will it avoid the sterilisation of economic mineral reserves? Will it minimise the degradation/loss of soils due to new development?	0	Site not within an area designated in the Minerals and Waste LDF.
	Minimise waste production and support the reuse and recycling of waste products	Will it encourage reduction in household waste, and increase waste recovery and recycling?		
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	0/-	Development could impact on air quality, with minor negative impacts incapable of mitigation. The site is of a significant size and there is the potential for an increase in traffic and static emissions that could affect local air quality.
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	---/-	Significant negative impacts to or as a result of the development that are incapable of mitigation. The site is close to commercial and industrial units and the Motocross site, and offsite mitigation is likely to be required. Some possible noise and vibration from A428 which should be possible to mitigate.
		Will it minimise, and where possible address, land contamination?	0	Development not on land likely to be contaminated.
		Will it protect and where possible enhance the quality of the water environment?	0	Development unlikely to effect water quality. Assumptions for a neutral impact are that appropriate standards and pollution control measures will be achieved through the development process, e.g. as part of Sustainable Drainage Systems (SuDS).
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiversity?	0/-	Minor negative impact on protected sites and species. The site is adjacent to Knapwell Roadside Verge CWS and Knapwell Wood CWS. Brockley End Meadow CWS lies 540m to the west of the site. Elsworth Wood SSSI lies approximately 530m to the west of the site.
	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	0/-	Minor negative impact as loss of farmland and severance of hedgerows. Some opportunities for habitat enhancement.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	+ /+++	Development would create minor opportunities for new Green Infrastructure. New landscaping associated with development of this site will create access to areas of open space within and on the edge of the development.

Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	---	Significant negative impact (development conflicts with landscape character, with significant negative impacts incapable of mitigation) - due to its elevation and open character, development on this site would form a new built skyline when viewed from local villages and roads. The scale of the development and types of buildings proposed would be very difficult to integrate into the local landscape. The deeply rural approach to Knapwell would be urbanised and the village itself completely dominated by the development, and the detailed and layered landscape to the north of the site would become obscured by the development.
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	0	Neutral impact (generally compatible, or capable of being made compatible with local townscape character). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process.
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	0/-	Neutral impact (existing features retained, or appropriate mitigation possible). The site will have an impact on the setting of the listed buildings at New Inn Farm. Archaeological potential will require further information but the assumption for a neutral impact is that it is likely appropriate mitigation can be achieved through the development process.
	Create places, spaces and buildings that work well, wear well and look good	Will it lead to developments built to a high standard of design and good place making that reflects local character?		
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	0/+	Development could create minor additional opportunities for renewable energy.
		Will it promote energy efficiency?		
		Will it minimise contributions to climate change through sustainable construction practices?		
	Reduce vulnerability to future climate change effects	Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	0	Flood Zone 1 and no drainage issues that cannot be appropriately addressed.
		Will it minimise the likely impacts of climate change on the development through appropriate design?		
Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?				
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?		
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?		

Inclusive Communities - Housing	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	+	Development would create minor opportunities for new public open space.
	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?		
		Will it provide for housing for the ageing population?		
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	No effect on pitch or plot provision.
Inclusive Communities - Redressing inequalities and involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	+	New settlement.
		Sub-Indicator: Distance to centre	0	Centre point of site beyond 1000m of nearest existing centre Majority of site would be within 800m of any new local centre developed as part of site.
		Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	+ /+++	New local facilities or improved existing facilities are proposed of significant benefit. The development proposes employment, retail and leisure uses.
		Will improve relations between people from different backgrounds or social groups?		
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will it redress inequalities?		
		Will it increase the ability of people to influence decisions, including 'hard to reach' groups?		
Encourage and enable the active involvement of local people in community activities	Will it encourage engagement with community activities?	+ /+++	New local community facilities or improved existing facility is proposed of minor benefit (and is viable and sustainable).	

Economic Activity		Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	+ /+++	Development would support minor additional employment opportunities.
	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	The assumption is that any additional retail proposed will only be of a suitable scale to serve the needs of new residents and will not impact on other centres.
		Will it encourage the rural economy and diversification, and support sustainable tourism?		
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it contribute to providing a range of employment opportunities, in accessible locations?	+	39.71 minutes from site to nearest employment area with 2000+ employees. No employment areas with 2000+ employees that can be accessed in less than 30mins - 1.6km walk. Proposed - Site would develop business / employment as part of development. Therefore it is assumed that employments areas of 2000+ will
		Will it improve the level of investment in key community services and infrastructure, including broadband?	- /---	Major utilities infrastructure improvements required, but constraints can be addressed. Development of this site is not supportable from the existing electricity network, therefore significant reinforcement and new network required. There is insufficient spare capacity within the distribution zone to supply the total number of proposed properties which could arise if all the SHLAA sites with the zone were to be developed. The WwTW is operating close to capacity and therefore has limited capacity to accommodate this site. The sewerage network is approaching capacity.
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve access to education and training, and support provision of skilled employees to the economy?	-	School capacity not sufficient, but significant issues can be adequately addressed.

Transport	Reduce the need to travel and promote more sustainable transport choices.	Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	0	Total score of 13.
		Sub-indicator: Distance to bus stop / rail station	0	New settlement would require new bus stops which would mostly fall within 800m of the site. 1,205m ACF from the centre of the site to the nearest bus stop (Citi 4 service).
		Sub-indicator: Frequency of Public Transport	+	New settlement would have at least a 20 minute bus service to Cambridge, equivalent to Cambourne Citi 4. 20 minute service.
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	0	35 minutes from bus stop to the centre of Cambridge.
		Sub-indicator: Distance for cycling to City Centre or Market Town	0	10.21km ACF from the centre of the site to St. Ives Market. 12.68km ACF from the centre of the site to Cambridge Market.
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	-/---	Insufficient capacity or access constraints that cannot be adequately be mitigated. Development would have a direct impact on A428 with potential capacity issues at the Cambourne Junction and on the corridor between Cambridge and St. Neots / Bedford, particularly junctions at either end of this section.
		Will it make the transport network safer for and promote use of non-motorised modes?	+	There are opportunities to encourage more sustainable transport links both on and off site. Provision or contribution from this site would result in minor improvement to public transport, walking or cycling facilities.

Site No. Site 266
Address Cave Industrial Estate, Chesterton Fen Road, Milton
Location Cambridge
Category of site Edge of Cambridge
Site area 1.67

Theme	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	+++	The whole site is previously developed land comprising a variety of industrial and commercial buildings and hardstanding.
		Will it use land efficiently?		
		Will it protect and enhance the best and most versatile agricultural land?	0	Development would not affect best and most versatile agricultural land (Grades 1 and 2).
		Will it avoid the sterilisation of economic mineral reserves? Will it minimise the degradation/loss of soils due to new development?	0	Site not within an area designated in the Minerals and Waste LDF.
	Minimise waste production and support the reuse and recycling of waste products	Will it encourage reduction in household waste, and increase waste recovery and recycling?		
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	0	Development unlikely to impact on air quality. Site lies in an area where air quality acceptable.
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	- / ---	Potential to create significant negative impacts to, or as a result of, the development, incapable of adequate mitigation - New Chesterton railway station / railway noise & industrial noise - proposals by the County Council for a new railway station and Guided Bus interchange at Chesterton Sidings have recently been approved with the possible intensification in use of existing railway land for the stabling of trains. Noise and vibration from any future station, CGB interchange, sidings and any new track alignments are constraints. Until the noise assessment is completed it is not possible to say with any certainty that the site is suitable for residential.
		Will it minimise, and where possible address, land contamination?	+	The site has been used for various industrial and commercial uses and may have contaminated land. Potential for minor benefits through remediation of minor contamination
		Will it protect and where possible enhance the quality of the water environment?	0	Assumptions for a neutral impact are that appropriate standards and pollution control measures will be achieved through the development process, e.g. as part of Sustainable Drainage Systems (Suds).
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiversity?	0	No impact on protected sites and species (or impacts could be mitigated). The River Cam, approximately 250m to the east, is a County Wildlife Site. There is potential for Great Crested Newts and reptiles in the pond in the south western corner of the site. However, it may be possible to mitigate any impact.
	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	0	Assumptions for a neutral impact are that existing features that warrant retention can be retained or appropriate mitigation will be achieved through the development process.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process.
	Maintain and	Will it maintain and enhance the diversity and distinctiveness of landscape character?	0	Neutral impact (generally compatible, or capable of being made compatible with local landscape character). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process. The site is within the built up area and largely surrounded by further built development.

Landscape, Townscape and Cultural Heritage	enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of townscape character?	0 / -	Neutral impact (generally compatible, or capable of being made compatible with local townscape character). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process. There may be a slight positive impact from clearing the commercial and industrial buildings from the site, however, given the adjoining uses are also commercial and industrial, development for residential in this location would be out of character with its surroundings.
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Archaeological potential will require further information but the assumption for a neutral impact is that it is likely appropriate mitigation can be achieved through the development process. Fen Ditton Conservation Area and a cluster of Grade II* Listed buildings lie to the east, but development is unlikely to impact on their setting.
	Create places, spaces and buildings that work well, wear well and look good	Will it lead to developments built to a high standard of design and good place making that reflects local character?		
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	0	Standard requirements for renewables would apply.
		Will it promote energy efficiency?		
		Will it minimise contributions to climate change through sustainable construction practices?		
	Reduce vulnerability to future climate change effects	Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	0	Flood Zone 1 and no drainage issues that cannot be appropriately addressed.
		Will it minimise the likely impacts of climate change on the development through appropriate design?		
Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?				
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?		
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?		

Inclusive Communities - Housing	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	0	Neutral impact (existing features retained or appropriate mitigation).
	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?		
		Will it provide for housing for the ageing population?		
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0 / -	The site is part of a much larger area identified in 'saved' Local Plan 2004 Policy CNF/6 for the development of Gypsy and Traveller pitches. Development for housing would therefore result in the loss of an allocated site for future delivery of Gypsy and Traveller pitches.
Inclusive Communities - Redressing inequalities and involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	+++	Edge of Cambridge
		Sub-Indicator: Distance to centre	---	1,040m from the centre of the site to Green End Road, Cambridge.
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	0	No facilities lost, and no new facilities proposed directly as a result of the development.
		Will improve relations between people from different backgrounds or social groups?		
		Will it redress inequalities?		
	Encourage and enable the active involvement of local people in community activities	Will it increase the ability of people to influence decisions, including 'hard to reach' groups?		
		Will it encourage engagement with community activities?	0	No facilities lost, and no new facilities proposed directly as a result of the development.

Economic Activity		Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	---	Development would have significant negative effect on employment opportunities, as a result of the loss of existing employment land. The site is used for light industry and there are few sites close to Cambridge.
	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	Development would have no effect on vitality or viability of existing centres. The indicator is likely to apply particularly to sites which include retail, offices, or leisure uses.
		Will it encourage the rural economy and diversification, and support sustainable tourism?		
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it contribute to providing a range of employment opportunities, in accessible locations?	+++	11.00 minutes from site to nearest employment area with 2000+ employees. 7 employment areas with 2000+ employees that can be accessed in less than 30mins - 1.6km walk.
		Will it improve the level of investment in key community services and infrastructure, including broadband?	- / ---	Major utilities Infrastructure improvements required, but constraints can be addressed. Electricity would require reinforcement. There is insufficient spare mains water capacity within the distribution zone to supply the number of proposed properties which could arise if all the SHLAA sites within the zone were to be developed. The site is not served by gas and a complex connection and pipe lay would be required. The sewerage network is approaching capacity and will require investigation and possibly mitigation. This is a small site and it is not clear that the upgardes required would be viable.
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve access to education and training, and support provision of skilled employees to the economy?	-	Insufficient spare school capacity but potential for improvement to meet needs. Insufficient primary and secondary school capacity.

Transport	Reduce the need to travel and promote more sustainable transport choices.	Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	+	Total score of 19.
		Sub-indicator: Distance to bus stop / rail station	-	811m ACF from the centre of the site to the nearest bus stop.
		Sub-indicator: Frequency of Public Transport	+	20 Minute Service
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	+++	15 Minutes from Shelbourne Close to Cambridge.
		Sub-indicator: Distance for cycling to City Centre or Market Town	+++	3.50km ACF from the centre of the site to Cambridge Market.
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	0	No capacity constraints identified, safe access can be achieved. The Highway Authority is concerned about increasing vehicle movements to this area, as the only access is through a busy urban neighbourhood, therefore vehicular movements from any proposed change of use should not exceed those generated by the existing lawful use.
		Will it make the transport network safer for and promote use of non-motorised modes?	0	No impact.

Site No. Site 268
Address Toft Road, Hardwick
Location Hardwick
Category of site Group Village
Site area 3.61

Theme	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	0	No previously developed land.
		Will it use land efficiently?		
		Will it protect and enhance the best and most versatile agricultural land?	-	Minor loss of best and most versatile agricultural land (Grades 1 and 2) - small site but all Grade 2.
		Will it avoid the sterilisation of economic mineral reserves? Will it minimise the degradation/loss of soils due to new development?	0	Site not within an area designated in the Minerals and Waste LDF.
	Minimise waste production and support the reuse and recycling of waste products	Will it encourage reduction in household waste, and increase waste recovery and recycling?		
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	0	Development unlikely to impact on air quality. Site lies in an area where air quality acceptable.
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	0/-	Development compatible with neighbouring uses. Some minor to moderate additional road traffic noise generation impact on existing residential due to development related car movements but dependent on location of site entrance.
		Will it minimise, and where possible address, land contamination?	0	Development not on land likely to be contaminated.
		Will it protect and enhance the quality of the water environment?	0	Development unlikely to affect water quality. Assumptions for a neutral impact are that appropriate standards and pollution control measures will be achieved through the development process, e.g. as part of Sustainable Drainage Systems (SuDS).
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiversity?	0	No impact on protected sites and species (or impacts could be mitigated).
	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	0	Assumptions for a neutral impact are that existing features that warrant retention can be retained or appropriate mitigation will be achieved through the development process.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process.

Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	---	Significant negative impact (development conflicts with landscape character, with significant negative impacts incapable of mitigation) - Development of the site would result in the encroachment of the built area into the open countryside.
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	---	Significant negative impact (development conflicts with townscape character, with significant negative impacts incapable of mitigation) - Development of this site would be contrary to the linear character of this part of the village.
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	---	Significant negative impact on historic assets (incapable of satisfactory mitigation) - development of the site is likely to have a significant adverse impact on the settings of the conservation area.
	Create places, spaces and buildings that work well, wear well and look good	Will it lead to developments built to a high standard of design and good place making that reflects local character?		
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	0	Standard requirements for renewables would apply.
		Will it promote energy efficiency?		
		Will it minimise contributions to climate change through sustainable construction practices?		
	Reduce vulnerability to future climate change effects	Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	0	Flood Zone 1 and no drainage issues that cannot be appropriately addressed.
		Will it minimise the likely impacts of climate change on the development through appropriate design?		
Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?				
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?		
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?		

Inclusive Communities - Housing	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	0	Neutral impact (existing features retained or appropriate mitigation). Assumption is standard requirements for open space would apply.
	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?		
		Will it provide for housing for the ageing population?		
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	No effect on pitch or plot provision.
Inclusive Communities - Redressing Inequalities and involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	-	Group Village
		Sub-Indicator: Distance to centre	---	1,345m from the centre of the site to Limes Road, north of the school, a central point in the village surrounded by services and facilities
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	0	No facilities lost, and no new facilities proposed directly as a result of the development.
		Will improve relations between people from different backgrounds or social groups?		
	Encourage and enable the active involvement of local people in community activities	Will it redress inequalities?		
		Will it increase the ability of people to influence decisions, including 'hard to reach' groups?		
	Will it encourage engagement with community activities?	0	No facilities lost, and no new facilities proposed directly as a result of the development.	

Economic Activity		Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	0	Development would have no effect on employment land or premises.
	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	Development would have no effect on vitality or viability of existing centres. The indicator is likely to apply particularly to sites which include retail, offices, or leisure uses.
		Will it encourage the rural economy and diversification, and support sustainable tourism?		
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it contribute to providing a range of employment opportunities, in accessible locations?	+	24 minutes from site to nearest employment area with 2000+ employees. 2 employment areas with 2000+ employees that can be accessed in less than 30mins - 1.6km walk.
		Will it improve the level of investment in key community services and infrastructure, including broadband?	+/-	Major utilities infrastructure improvements required, but constraints can be addressed. There is no spare mains water capacity within the distribution zone. The WwTW is operating at capacity and will require new consent limits and major capital expenditure to accommodate development of this site. The sewerage network is at capacity and a developer impact assessment will be required to ascertain the required upgrades necessary.
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve access to education and training, and support provision of skilled employees to the economy?	-	School capacity not sufficient, but significant issues can be adequately addressed.

Transport	Reduce the need to travel and promote more sustainable transport choices.	Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	0	Total score of 12.
		Sub-indicator: Distance to bus stop / rail station	---	252m ACF from the centre of the site to the nearest bus stop (14 Service). 1,590m ACF from the centre of the site to the nearest bus stop (14 Service).
		Sub-indicator: Frequency of Public Transport	+	Less than hourly service (14 Service). 20 Minute Service (Citi 4)
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	+	54 minutes from Hardwick to Cambridge (14 Service); 26 minutes from Hardwick to Cambridge (Citi 4)
		Sub-indicator: Distance for cycling to City Centre or Market Town	+	7.99km ACF from the centre of the site to Cambridge Market.
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	-	Minor negative effects incapable of mitigation. Safe access to the highway can be achieved, however development could have an impact on A428 with potential capacity issues at the Cambourne Junction and on the corridor between Cambridge and St. Neots / Bedford, particularly junctions at either end of this section.
		Will it make the transport network safer for and promote use of non-motorised modes?	0	No impact.

Site No. Site 269
Address Land adjacent to The Woodyard, Cottenham
Location Cottenham
Category of site Minor Rural Centre
Site area 1.42

Theme	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	0	No previously developed land.
		Will it use land efficiently?		
		Will it protect and enhance the best and most versatile agricultural land?	-	Minor loss of best and most versatile agricultural land (Grades 1 and 2) - small site but all Grade 2.
		Will it avoid the sterilisation of economic mineral reserves? Will it minimise the degradation/loss of soils due to new development?	0	Site not within an area designated in the Minerals and Waste LDF
	Minimise waste production and support the reuse and recycling of waste products	Will it encourage reduction in household waste, and increase waste recovery and recycling?		
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	0	Development unlikely to impact on air quality. Site lies in an area where air quality acceptable.
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	-	Development compatible with neighbouring uses. Some minor to moderate additional road traffic noise generation impact on existing residential due to development related car movements but dependent on location of site entrance. A depot located immediately to the south but use unknown and may require further assessment.
		Will it minimise, and where possible address, land contamination?	0	Development not on land likely to be contaminated.
		Will it protect and where possible enhance the quality of the water environment?	0	Assumptions for a neutral impact are that appropriate standards and pollution control measures will be achieved through the development process, e.g. as part of Sustainable Drainage Systems (Suds).
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiversity?	0	No impact on protected sites and species (or impacts could be mitigated).
	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	0	Assumptions for a neutral impact are that existing features that warrant retention can be retained or appropriate mitigation will be achieved through the development process.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process.

Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	---	Significant Negative Impact (Development conflicts with landscape character, with significant negative impacts incapable of mitigation) - The land forms an important part of the setting of this part of historically sensitive part of Cottenham. Previous planning applications have been refused as development in this location would constitute a sporadic form of development, detached from the village, and would represent an intrusion into open countryside.
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	---	Significant Negative Impact (Development conflicts with townscape character, with significant negative impacts incapable of mitigation) - The land forms an important part of the setting of this part of historically sensitive part of Cottenham. The VDS recognises the importance of this area on the wider setting of Cottenham, with important views to All Saints Church. Also an area identified as a vista that contributes to the character and attractiveness of Cottenham and should be protected.
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	---	Significant Negative Impact on historic Assets (incapable of satisfactory mitigation) - The land forms an important part of the setting of this part of historically sensitive part of Cottenham, including the Grade I Listed Church of All Saints and other Grade II Listed Buildings along High Street . The VDS recognises the importance of this area on the wider setting of Cottenham, with important views to the Church. Also an area identified as a vista that contributes to the character and attractiveness of Cottenham and should be protected. Archaeological potential will require further information but the assumption for a neutral impact is that it is likely appropriate mitigation can be achieved through the development process.
	Create places, spaces and buildings that work well, wear well and look good	Will it lead to developments built to a high standard of design and good place making that reflects local character?		
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	0	Standard requirements for renewables would apply.
		Will it promote energy efficiency?		
		Will it minimise contributions to climate change through sustainable construction practices?		
	Reduce vulnerability to future climate change effects	Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	0	Flood Zone 1 and no drainage issues that cannot be appropriately addressed.
		Will it minimise the likely impacts of climate change on the development through appropriate design?		
Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?				
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?		
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?		

Inclusive Communities - Housing	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	0	Neutral impact (existing features retained or appropriate mitigation).
	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?		
		Will it provide for housing for the ageing population?		
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	No effect on pitch or plot provision.
Inclusive Communities - Redressing inequalities and involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	0	Minor Rural Centre
		Sub-Indicator: Distance to centre	---	1,146m from the centre of the site to a point along the High Street / B1049. Services and facilities run a long way along Cottenham High Street
		Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	0	No facilities lost, and no new facilities proposed directly as a result of the development.
		Will improve relations between people from different backgrounds or social groups?		
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will it redress inequalities?		
		Will it increase the ability of people to influence decisions, including 'hard to reach' groups?		
	Encourage and enable the active involvement of local people in community activities	Will it encourage engagement with community activities?	0	No facilities lost, and no new facilities proposed directly as a result of the development.

Economic Activity		Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	0	Development would have no effect on employment land or premises.
	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	Development would have no effect on vitality or viability of existing centres. The indicator is likely to apply particularly to sites which include retail, offices, or leisure uses.
		Will it encourage the rural economy and diversification, and support sustainable tourism?		
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it contribute to providing a range of employment opportunities, in accessible locations?	+	23.16 minutes from site to nearest employment area with 2000+ employees. Only 1 employment area with 2000+ employees that can be accessed in less than 30mins - 1.6km walk.
		Will it improve the level of investment in key community services and infrastructure, including broadband?	+++ / +	Development can use existing capacity in utilities infrastructure. However, there is insufficient spare mains water capacity within the distribution zone to supply the number of proposed properties which could arise if all the SHLAA sites within the zone were to be developed. The sewerage network is approaching capacity and will require investigation and possibly mitigation.
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve access to education and training, and support provision of skilled employees to the economy?	+	Insufficient spare school capacity but potential for improvement to meet needs. Insufficient secondary school capacity.

Transport	Reduce the need to travel and promote more sustainable transport choices.	Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	0	Total score of 10.
		Sub-indicator: Distance to bus stop / rail station	---	231m ACF from the centre of the site to the nearest bus stop (X8). 1,108m ACF from the centre of the site to the nearest bus stop (Citi 8).
		Sub-indicator: Frequency of Public Transport	+	X8 - less than hourly service. Citi 8 - 20 Minute Service.
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	0	X8 - 34 Minutes from Cottenham to Cambridge. Citi 8 - 37 Minutes from Cottenham to Cambridge.
		Sub-indicator: Distance for cycling to City Centre or Market Town	0	10.15km ACF from the centre of the site to Cambridge Market.
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	0	No capacity constraints identified, safe access can be achieved. Assumption is that a fairly large proportion of trips might reasonably be accommodated by the A14, but limitations on the county's network could result in localised diversionary trips on the A14 and M11 and this in turn may limit the capacity of these routes to accommodate new development. Conversely, these settlements are reasonably likely to be able to be served by public transport or non-motorised modes.
		Will it make the transport network safer for and promote use of non-motorised modes?	0	No impact.

Site No. Site 270
Address Land off Gibson Close, Waterbeach
Location Waterbeach
Category of site Minor Rural Centre
Site area 0.69

Theme	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	0	No previously developed land.
		Will it use land efficiently?		
		Will it protect and enhance the best and most versatile agricultural land?	-	Minor loss of best and most versatile agricultural land (Grades 1 and 2) - small site but all Grade 2.
	Minimise waste production and support the reuse and recycling of waste products	Will it avoid the sterilisation of economic mineral reserves? Will it minimise the degradation/loss of soils due to new development?	0	Whole site within an area designated in the Minerals and Waste LDF but development would not have a negative impact.
Will it encourage reduction in household waste, and increase waste recovery and recycling?				
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	0	Development unlikely to impact on air quality. Site lies in an area where air quality acceptable.
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	0	Development compatible with neighbouring uses.
		Will it minimise, and where possible address, land contamination?	0	Development not on land likely to be contaminated
		Will it protect and where possible enhance the quality of the water environment?	0	Assumptions for a neutral impact are that appropriate standards and pollution control measures will be achieved through the development process, e.g. as part of Sustainable Drainage Systems (Suds). A majority of the development sites falls within the Waterbeach Level Internal Drainage District, which does not have any capacity to accept any direct discharge into its system above the green field run off rate. All surface water from the site would have to be balanced before it is released into the Boards system. We also have main drains adjacent to the site, therefore any works involving these drains would require the consent of the Board.
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiversity?	0	No impact on protected sites and species (or impacts could be mitigated). There is a protected Ash tree situated in rear garden of 43 Vicarage Close, approximately 22m to the north east.
	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	0	Assumptions for a neutral impact are that existing features that warrant retention can be retained or appropriate mitigation will be achieved through the development process.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process. Footpaths run along the northern and western boundaries of the site and it should be possible to provide a link to these.

Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	-	Minor Negative Impact (Development conflicts with landscape character, minor negative impacts incapable of mitigation) - To the west and north, enclosed fields again provide an important landscape setting for the village. Public footpaths lead out from The Green into the countryside along the boundaries of the site. As an undeveloped green wedge coming in almost to the heart of the village, the site therefore provides an important amenity area. It forms a semi-rural transition area between the village and the countryside beyond, and retains the rural character of the local footpaths. The appeal inspector (see planning history) felt the introduction of development would be harmful to the rural attributes.
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	-	Minor Negative Impact (development conflicts with townscape character, minor negative impacts incapable of mitigation) - To the west and north, enclosed fields again provide an important landscape setting for the village. Public footpaths lead out from The Green into the countryside along the boundaries of the site. As an undeveloped green wedge coming in almost to the heart of the village, the site therefore provides an important amenity area. It forms a semi-rural transition area between the village and the countryside beyond, and retains the rural character of the local footpaths. The appeal inspector (see planning history) felt the introduction of development would be harmful to the rural attributes.
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	---	Significant Negative Impact on historic Assets (incapable of satisfactory mitigation) - The site forms part of the setting of the Conservation Area and there are three Grade II Listed Buildings close to the site. There would be an adverse impact on the setting of 5 Greenside due to loss of significant green setting. Archaeological potential will require further information but the assumption for a neutral impact is that it is likely appropriate mitigation can be achieved through the development process.
	Create places, spaces and buildings that work well, wear well and look good	Will it lead to developments built to a high standard of design and good place making that reflects local character?		
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	0	Standard requirements for renewables would apply.
		Will it promote energy efficiency?		
		Will it minimise contributions to climate change through sustainable construction practices?		
	Reduce vulnerability to future climate change effects	Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	0	Flood Zone 1 and no drainage issues that cannot be appropriately addressed.
		Will it minimise the likely impacts of climate change on the development through appropriate design?		
Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?				

Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?		
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?		
Inclusive Communities - Housing	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	0	Neutral impact (existing features retained or appropriate mitigation). Assumption is standard requirements for open space would apply.
	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?		
		Will it provide for housing for the ageing population?		
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	No effect on pitch or plot provision.
Inclusive Communities - Redressing inequalities and involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	0	Minor Rural Centre
		Sub-Indicator: Distance to centre	+++	171m from the centre of the site to a point along Chapel Street. Services and facilities clustered around surrounding area.
		Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	0	No facilities lost, and no new facilities proposed directly as a result of the development.
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will improve relations between people from different backgrounds or social groups?		
		Will it redress inequalities?		
	Encourage and enable the active involvement of local people in community activities	Will it increase the ability of people to influence decisions, including 'hard to reach' groups?		
		Will it encourage engagement with community activities?	0	No facilities lost, and no new facilities proposed directly as a result of the development.
		Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	0	Development would have no effect on employment land or premises.

Economic Activity	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	Development would have no effect on vitality or viability of existing centres. The indicator is likely to apply particularly to sites which include retail, offices, or leisure uses.
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it encourage the rural economy and diversification, and support sustainable tourism?		
		Will it contribute to providing a range of employment opportunities, in accessible locations?	+	20.41 minutes from site to nearest employment area with 2000+ employees. 10 employment areas with 2000+ employees that can be accessed in less than 30mins - 1.6km walk.
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve the level of investment in key community services and infrastructure, including broadband?	+++ / +	Development can use existing capacity in utilities infrastructure. However, there is insufficient spare mains water capacity within the distribution zone to supply the number of proposed properties which could arise if all the SHLAA sites within the zone were to be developed. The sewerage network is approaching capacity and will require investigation and possibly mitigation.
		Will it improve access to education and training, and support provision of skilled employees to the economy?	- / ---	Insufficient spare school capacity but potential for improvement to meet needs. Insufficient primary and secondary school capacity.

Transport	Reduce the need to travel and promote more sustainable transport choices.	Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	+	Total score of 16.
		Sub-indicator: Distance to bus stop / rail station	+++	122m ACF from the centre of the site to the nearest bus stop.
		Sub-indicator: Frequency of Public Transport	-	9 service - Hourly service.
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	+	9 service - 25 Minutes from Waterbeach to Cambridge.
		Sub-indicator: Distance for cycling to City Centre or Market Town	+	8.24km ACF from the centre of the site to Cambridge Market.
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	---	Minor negative effects incapable of mitigation. Access constraints - the access link to the public highway is unsuitable to serve the number of units that are being proposed. On the whole, the in-fill sites are less likely to present an unacceptable pressure on the A14 given the majority of travel demand will be focused on Cambridge and credible alternatives to car travel could be available.
		Will it make the transport network safer for and promote use of non-motorised modes?	0	No impact.

Site No. Site 271
Address Land adj to Station Road and Duxford Road, Whittlesford Bridge
Location Whittlesford Bridge
Category of site Group Village
Site area 8.07

Theme	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	0	No previously developed land.
		Will it use land efficiently?		
		Will it protect and enhance the best and most versatile agricultural land?	-	Minor loss of best and most versatile agricultural land (Grades 1 and 2) - small site but all Grade 2 (8.07 ha.)
		Will it avoid the sterilisation of economic mineral reserves? Will it minimise the degradation/loss of soils due to new development?	0	Site within an area designated in the Minerals and Waste LDF but development would not have a negative impact
	Minimise waste production and support the reuse and recycling of waste products	Will it encourage reduction in household waste, and increase waste recovery and recycling?		
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	0	Development unlikely to impact on air quality. Site lies in an area where air quality acceptable.
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	-	Development compatible with neighbouring uses. Commercial to south east. Railway to east. However existing residential already in close proximity so minor to medium risk
		Will it minimise, and where possible address, land contamination?	+	Site adjacent to filled land. Potential for minor benefits through remediation of minor contamination
		Will it protect and where possible enhance the quality of the water environment?	0	Development unlikely to affect water quality. The site within Groundwater Source Protection Zone 3 which does not rule out development but may influence land use or require pollution control measures. Assumptions for a neutral impact are that appropriate standards and pollution control measures will be achieved through the development process and will mitigate any impact on groundwater,
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiversity?	0	No impact on protected sites and species (or impacts could be mitigated). Within the grounds of No 19 Station Road is a protected sycamore, which is to the south west of the site.
	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	0	Assumptions for a neutral impact are that existing features that warrant retention can be retained or appropriate mitigation will be achieved through the development process.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process.

Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	---	Significant Negative Impact (Development conflicts with landscape character, with significant negative impacts incapable of mitigation) - Development of this large site is out of scale with the existing village and would create a large backland development in an exposed location, in an area with a strong linear character.
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	---	Significant Negative Impact (Development conflicts with townscape character, with significant negative impacts incapable of mitigation) - Development of this large site is out of scale with the existing village and would create a large backland development in an exposed location, in an area with a strong linear character.
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	---	Significant Negative Impact on historic Assets (incapable of satisfactory mitigation) - The site forms an important part of the setting a Grade II* and II Listed Building. Archaeological potential will require further information but it is likely appropriate mitigation can be achieved through the development process.
	Create places, spaces and buildings that work well, wear well and look good	Will it lead to developments built to a high standard of design and good place making that reflects local character?		
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	0	Standard requirements for renewables would apply.
		Will it promote energy efficiency?		
		Will it minimise contributions to climate change through sustainable construction practices?		
	Reduce vulnerability to future climate change effects	Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	0	Flood Zone 1 and no drainage issues that cannot be appropriately addressed.
		Will it minimise the likely impacts of climate change on the development through appropriate design?		
		Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?		
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?		
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?		

Inclusive Communities - Housing	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	0	Neutral impact (existing features retained or appropriate mitigation). Assumption is standard requirements for open space would apply.
	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?		
		Will it provide for housing for the ageing population?		
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	No effect on pitch or plot provision.
Inclusive Communities - Redressing inequalities and involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	-	Group village
		Sub-Indicator: Distance to centre	---	Beyond 1000m from the centre of the to the nearest centre - Whittlesford
		Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	0	No facilities lost, and no new facilities proposed directly as a result of the development.
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will improve relations between people from different backgrounds or social groups?		
		Will it redress inequalities?		
	Encourage and enable the active involvement of local people in community activities	Will it increase the ability of people to influence decisions, including 'hard to reach' groups?		
Will it encourage engagement with community activities?		0	No facilities lost, and no new facilities proposed directly as a result of the development.	

Economic Activity		Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	0	Development would have no effect on employment land or premises.
	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	Development would have no effect on vitality or viability of existing centres. The indicator is likely to apply particularly to sites which include retail, offices, or leisure uses.
		Will it encourage the rural economy and diversification, and support sustainable tourism?		
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it contribute to providing a range of employment opportunities, in accessible locations?	+	23.56 minutes from site to nearest employment area with 2000+ employees. 4 employment areas with 2000+ employees that can be accessed in less than 30mins - 1.6km walk.
		Will it improve the level of investment in key community services and infrastructure, including broadband?	-	Major utilities Infrastructure improvements required, but constraints can be addressed. The electricity, mains water, gas and sewerage systems will need reinforcement to increase capacity.
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve access to education and training, and support provision of skilled employees to the economy?	+	Insufficient spare school capacity but potential for improvement to meet needs

Transport	Reduce the need to travel and promote more sustainable transport choices.	Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	+	Total score of 18.
		Sub-indicator: Distance to bus stop / rail station	+++	256m ACF from the centre of the site to the nearest bus stop. 356m to train station.
		Sub-indicator: Frequency of Public Transport	0	Bus - Hourly Service Train - 30 minute service
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	+++	Bus - 51 minutes to Cambridge. Train - 11 minutes to Cambridge
		Sub-indicator: Distance for cycling to City Centre or Market Town	0	10.62km ACF from the centre of the site to Saffron Walden Market.
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	---	Insufficient capacity or access constraints that cannot be adequately mitigated. The proposed site does not appear to have a direct link to the adopted public highway.
		Will it make the transport network safer for and promote use of non-motorised modes?	0	No impact.

Site No. Site 272
Address Hillside Farm Buildings, Orwell Road, Barrington
Location Barrington
Category of site Group Village
Site area 0.49

Theme	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	0	No previously developed land.
		Will it use land efficiently?		
		Will it protect and enhance the best and most versatile agricultural land?	0	Minor loss of best and most versatile agricultural land (Grades 1 and 2) - small site but all Grade 2 (0.49 ha.).
		Will it avoid the sterilisation of economic mineral reserves? Will it minimise the degradation/loss of soils due to new development?	0	Site not within an area designated in the Minerals and Waste LDF.
	Minimise waste production and support the reuse and recycling of waste products	Will it encourage reduction in household waste, and increase waste recovery and recycling?		
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	0	Development unlikely to impact on air quality. Site lies in an area where air quality acceptable.
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	+	Development would remove Hillside Farms that creates nuisance, resulting in minor benefits in the local noise climate.
		Will it minimise, and where possible address, land contamination?	+	Current agricultural/commercial use may have contaminated land. Potential for minor benefits through remediation of minor contamination
		Will it protect and where possible enhance the quality of the water environment?	0	Assumptions for a neutral impact are that appropriate standards and pollution control measures will be achieved through the development process, e.g. as part of Sustainable Drainage Systems (Suds).
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiversity?	0	No impact on protected sites and species (or impacts could be mitigated).
	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	0	Assumptions for a neutral impact are that existing features that warrant retention can be retained or appropriate mitigation will be achieved through the development process.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process. Footpaths to the north west, and to the east.

Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	---	Significant Negative Impact (Development conflicts with landscape character, with significant negative impacts incapable of mitigation) - The site is very prominent and exposed to the surrounding countryside, making it very visible from the approach from the north. The existing farm buildings are rural in character and located in an area where there is a soft edge to the village, with plenty of trees and hedgerow. Residential development on this site will create a harsh gateway to the village and have a detrimental impact on the open and rural character of this approach to the village.
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	---	Significant Negative Impact (Development conflicts with townscape character, with significant negative impacts incapable of mitigation) - The site is very prominent and exposed to the surrounding countryside, making it very visible from the approach from the north. The existing farm buildings are rural in character and located in an area where there is a soft edge to the village, with plenty of trees and hedgerow. Residential development on this site will create a harsh gateway to the village and have a detrimental impact on the open and rural character of this approach to the village.
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	-	Minor Negative Impact on historic Assets (incapable of satisfactory mitigation) – site forms part of the setting of several Grade II Listed Buildings and the Conservation Area. Archaeological potential will require further information but the assumption for a neutral impact is that it is likely appropriate mitigation can be achieved through the development process.
	Create places, spaces and buildings that work well, wear well and look good	Will it lead to developments built to a high standard of design and good place making that reflects local character?		
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	0	Standard requirements for renewables would apply.
		Will it promote energy efficiency?		
		Will it minimise contributions to climate change through sustainable construction practices?		
	Reduce vulnerability to future climate change effects	Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	0	Flood Zone 1 and no drainage issues that cannot be appropriately addressed.
		Will it minimise the likely impacts of climate change on the development through appropriate design?		
Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?				
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?		
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?		
	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	0	Neutral impact (existing features retained or appropriate mitigation). Assumption is standard requirements for open space would apply.

Inclusive Communities - Housing	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?		
		Will it provide for housing for the ageing population?		
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	No effect on pitch or plot provision.
Inclusive Communities - Redressing Inequalities and Involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	-	Group Village
		Sub-Indicator: Distance to centre	0	693m ACF to the Village Hall, central to the village and other services and facilities within the village.
		Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	0	No facilities lost, and no new facilities proposed directly as a result of the development.
		Will improve relations between people from different backgrounds or social groups?		
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will it redress inequalities?		
		Will it increase the ability of people to influence decisions, including 'hard to reach' groups?		
Encourage and enable the active involvement of local people in community activities	Will it encourage engagement with community activities?	0	No facilities lost, and no new facilities proposed directly as a result of the development.	

Economic Activity		Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	0	Development would have no effect on employment land or premises.
	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	Development would have no effect on vitality or viability of existing centres. The indicator is likely to apply particularly to sites which include retail, offices, or leisure uses.
		Will it encourage the rural economy and diversification, and support sustainable tourism?		
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it contribute to providing a range of employment opportunities, in accessible locations?	0	35.42 minutes from site to nearest employment area with 2000+ employees. No employment areas with 2000+ employees that can be accessed in less than 30mins - 1.6km walk.
		Will it improve the level of investment in key community services and infrastructure, including broadband?	+	Minor Utilities Infrastructure improvements required, but constraints can be addressed. There is insufficient spare mains water capacity within the distribution zone to supply the number of proposed properties which could arise if all the SHLAA sites within the zone were to be developed. The sewerage network is at capacity and both will require mitigation.
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve access to education and training, and support provision of skilled employees to the economy?	+	Insufficient spare school capacity but potential for improvement to meet needs. Insufficient secondary school capacity,

Transport		Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	0	Total score of 14.
	Reduce the need to travel and promote more sustainable transport choices.	Sub-indicator: Distance to bus stop / rail station	+++	285m ACF from the centre of the site to the nearest bus stop.
		Sub-indicator: Frequency of Public Transport	---	Less than hourly service.
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	+	30 Minutes from Barrington to Cambridge.
		Sub-indicator: Distance for cycling to City Centre or Market Town	+	9.62km ACF from the centre of the site to Cambridge Market.
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	0	No capacity constraints identified, safe access can be achieved.
		Will it make the transport network safer for and promote use of non-motorised modes?	0	No impact.

Site No. Site 273
Address Southwell Farm, Station Road, Longstanton (part of Northstowe Reserve)
Location Northstowe
Category of site Northstowe
Site area 1.84

Theme	Sustainability Objective	Decision Making Criteria	Score	Notes	
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	0	No previously developed land.	
		Will it use land efficiently?			
		Will it protect and enhance the best and most versatile agricultural land?	-	Minor loss of best and most versatile agricultural land (Grades 1 and 2)	
		Will it avoid the sterilisation of economic mineral reserves? Will it minimise the degradation/loss of soils due to new development?	0	Site within an area designated in the Minerals and Waste LDF but development would not have a negative impact.	
Air Quality and Environmental Pollution	Minimise waste production and support the reuse and recycling of waste products	Will it encourage reduction in household waste, and increase waste recovery and recycling?			
		Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	0	Development unlikely to impact on air quality. Site lies in an area where air quality acceptable. Close to the Councils' Air Quality Management Area. Extensive and detailed air quality assessments will be required to assess the cumulative impacts of this and other proposed developments within the locality on air quality along with provision of a Low Emissions Strategy
			Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	-	Development largely compatible with neighbouring uses with minor negative impacts incapable of mitigation. Proximity to the B1050 bypass to the south & east and the Guided Bus to the north with prevailing winds from the south west - traffic noise will need assessment South east of the site is close to Hydro Eu Ltd Station Road a medium to large sized industrial type unit / uses - noise from activities / plant and equipment and vehicle movements are material considerations with significant negative impact potential in terms of health and well being and a poor quality living environment and possible noise nuisance. Possible noise and malodour from nearby Southwell Farm, Station Road. Some minor to moderate additional off-site road traffic noise generation on existing residential due to development related car movements but dependent on location of site entrance.
			Will it minimise, and where possible address, land contamination?	0	Development not on land likely to be contaminated.
		Will it protect and where possible enhance the quality of the water environment?	0	Assumptions for a neutral impact are that appropriate standards and pollution control measures will be achieved through the development process, e.g. as part of Sustainable Drainage Systems (Suds).	

Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiversity?	0	No impact on protected sites and species (or impacts could be mitigated). Adjacent to a County Wildlife Site alongside the Cambridgeshire Guided Busway. Greatest impact likely to result from human disturbance of currently inaccessible farmland habitats. Badgers within Fish Ponds Wood may be an issue.
	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	0	Assumptions for a neutral impact are that existing features that warrant retention can be retained or appropriate mitigation will be achieved through the development process.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	+	Development would create minor opportunities for new Green Infrastructure as the promoter of the surrounding site 242 proposes provision of public open space and possible link to bridleway along the Guided Busway.
Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	-	Minor Negative Impact (Development conflicts with landscape character, minor negative impacts incapable of mitigation) - The development is at odds with the local landscape character and would have an adverse effect on the local landscape by adding a substantial urban extension into an open and rural landscape. To successfully set the proposed development into the existing landscape, and to preserve a landscape setting to Longstanton, substantial structural landscape will be required to the north, west and south of the development, giving genuine rural separation between the development and the village, and a soft, integrated edge treatment.
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	- / ---	Minor Negative Impact (development conflicts with townscape character, minor negative impacts incapable of mitigation) - Development of this site in combination with site 242 would be large in relation to the existing village settlements and would adversely affect the landscape setting of Longstanton to the extent that it may be difficult to view Longstanton as separate from Northstowe.
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Archaeological potential will require further information but the assumption for a neutral impact is that it is likely appropriate mitigation can be achieved through the development process.
	Create places, spaces and buildings that work well, wear well and look good	Will it lead to developments built to a high standard of design and good place making that reflects local character?		

Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	+	Development would create minor additional opportunities for renewable energy. The assumption is that as an extension to Northstowe it should be possible to continue the exemplar of sustainability standards
		Will it promote energy efficiency?		
		Will it minimise contributions to climate change through sustainable construction practices?		
	Reduce vulnerability to future climate change effects	Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	0	The majority of the site is within Flood Zone 1 and no drainage issues that cannot be appropriately addressed.
		Will it minimise the likely impacts of climate change on the development through appropriate design?		
		Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?		
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?		
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?		
Inclusive Communities - Housing	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	+	Development would create minor opportunities for new public open space as the promoter of the surrounding site 242 proposes provision of open space as part of the development.
	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?		
		Will it provide for housing for the ageing population?		
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	No effect on pitch or plot provision.

Inclusive Communities - Redressing inequalities and involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	+	Site would form part of a new settlement - an extension to Northstowe. It would not be deliverable on its own.
		Sub-Indicator: Distance to centre	0	Centre point of site beyond 1000m of nearest existing centre Majority of site would be within 800m of any new local centre developed as part of site.
		Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	+	New facilities or improved existing facilities are proposed of minor benefit. The promoter of the surrounding site 242 proposes a mixed use development of 900 dwellings with employment, retail, community uses, commercial uses and public open space.
		Will it improve relations between people from different backgrounds or social groups?		
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will it redress inequalities?		
		Will it increase the ability of people to influence decisions, including 'hard to reach' groups?		
	Encourage and enable the active involvement of local people in community activities	Will it encourage engagement with community activities?	+	New facilities or improved existing facilities are proposed of minor benefit. The promoter of the surrounding site proposes a mixed use development of 900 dwellings with employment, retail, community uses, commercial uses and public open space.

Economic Activity		Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	+	Development of the surrounding site 242 would support minor additional employment opportunities.
	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	Development would have no effect on vitality or viability of existing centres. The assumption is that the local centre proposed will only be of a suitable scale to serve needs of new residents and will not impact on other centres.
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it encourage the rural economy and diversification, and support sustainable tourism?		
		Will it contribute to providing a range of employment opportunities, in accessible locations?	+	21.58 minutes from site to nearest employment area with 2000+ employees. 6 employment areas with 2000+ employees that can be accessed in less than 30mins - 1.6km walk.
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve the level of investment in key community services and infrastructure, including broadband?	-	Major utilities Infrastructure improvements required, but constraints can be addressed. Significant reinforcement and new network is required for electricity provision. There is insufficient spare mains water capacity within the distribution zone to supply the number of proposed properties which could arise if all the SHLAA sites within the zone were to be developed. Gas will require a Pressure Reduction Station to be built to allow a local low pressure infrastructure to be laid around the developments. The sewerage network is approaching capacity and will require investigation and mitigation.
		Will it improve access to education and training, and support provision of skilled employees to the economy?	0	As an extension of Northstowe children within the development would attend one of the seven proposed primary schools and the proposed secondary school that are identified in the Development Framework Document to serve the new town. As the reserve land would be one of the last phases of Northstowe to be developed the capacity of these schools, and their ability to extend would need to be assessed nearer to the time. As the DFD is considering this site the location of schools, and their site size will be taken into account.

Transport	Reduce the need to travel and promote more sustainable transport choices.	Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	+	Total score of 19.
		Sub-indicator: Distance to bus stop / rail station	+++	New settlement would require new bus stops which would mostly fall within 800m of the site. 206m ACF from the centre of the site to the nearest guided busway stop (Longstanton).
		Sub-indicator: Frequency of Public Transport	+++	Guided Busway - 10 Minute Service.
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	+	Guided Busway - 23 Minutes to Cambridge; Guided Busway - 10 Minutes to St. Ives.
		Sub-indicator: Distance for cycling to City Centre or Market Town	0	8.84km ACF from the centre of the site to St. Ives Market. 10.77km ACF from the centre of the site to Cambridge Market.
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	---	Considered together with the surrounding site 242, there is insufficient capacity or access constraints that cannot be adequately mitigated. Site will be heavily reliant on the A14 for strategic access. It is difficult to see more than a small proportion of the sites in this area being deliverable prior to major improvements to the A14, and even this could require substantial mitigation measures. Capacity on the B1050 may become an issue as the core area of Northstowe is developed the Highway Authority is considering access to this site as part of the Phase I of the Northstowe site.
		Will it make the transport network safer for and promote use of non-motorised modes?	+++	Considered together with the surrounding site 242, development would result in significant improvement to public transport, walking or cycling facilities. The Highway Authority will require new development to provide or contribute to the provision of infrastructure to encourage more sustainable transport links both on and off site. This is a large site, so provision or contribution from this site would result in significant improvement to public transport, walking or cycling facilities.

Site No. Site 274
Address Land generally to the north and north east of Northstowe adjoining the Cambridgeshire Guided I
Location Northstowe
Category of site Northstowe
Site area 200.94

Theme	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	0	This large site includes some built development with curtilages adjacent to the B1050 and to the northwest.
		Will it use land efficiently?		
		Will it protect and enhance the best and most versatile agricultural land?	-	Minor loss of best and most versatile agricultural land (Grades 1 and 2) - large site but small part Grade 2. Half of the site is Grade 3a.
		Will it avoid the sterilisation of economic mineral reserves? Will it minimise the degradation/loss of soils due to new development?	0	Approximately 1/3 of the site within an area designated in the Minerals and Waste LDF but development would not have a negative impact.
	Minimise waste production and support the reuse and recycling of waste products	Will it encourage reduction in household waste, and increase waste recovery and recycling?		
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	0	Development unlikely to impact on air quality. Site lies in an area where air quality acceptable. This proposal is located close to the Councils' Air Quality Management Area and is of a significant size. Extensive and detailed air quality assessments will be required to assess the cumulative impacts of this and other proposed developments within the locality on air quality along with provision of a Low Emissions Strategy.
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	-	Development largely compatible with neighbouring uses with minor negative impacts incapable of mitigation. The site in close proximity to the B1050 to the west and the CGB to the south & Longstanton P& R - traffic / transport noise will need assessment. Some minor to moderate additional off-site road traffic noise generation on existing residential due to development related car movements but dependent on location of site entrance. Possible noise and malodour from nearby farms that may coexist as proposals would be closer than existing residential, but no history of complaints. There is a sewage treatment works with open trickle beds in close proximity to the west, offsite near BrookField associated with old barracks and existing housing etc. However, this is no longer operational. Assumption is that most can be mitigated, or the site is large enough to avoid affected areas.
		Will it minimise, and where possible address, land contamination?	+	Site is adjacent to guided busway (old railway line) and may have contaminated land. Potential for minor benefits through remediation of minor contamination
		Will it protect and where possible enhance the quality of the water environment?	0	Assumptions for a neutral impact are that appropriate standards and pollution control measures will be achieved through the development process, e.g. as part of Sustainable Drainage Systems (Suds).

Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiversity?	0	No impact on protected sites and species (or impacts could be mitigated). Adjacent to a County Wildlife Site alongside the Cambridgeshire Guided Busway. Greatest impact likely to result from human disturbance of currently inaccessible farmland habitats. Badgers within Fish Ponds Wood may be an issue.
	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	0	Assumptions for a neutral impact are that existing features that warrant retention can be retained or appropriate mitigation will be achieved through the development process.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	+	Development would create minor opportunities for new Green Infrastructure as the promoter proposes provision of public open space and possible links to the byway and footpath across the southern part of the site that links the villages of Longstanton and Rampton and to bridleway along the Guided Busway.
Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	---	Significant Negative Impact (Development conflicts with landscape character, with significant negative impacts incapable of mitigation) - The development is at odds with the local landscape character. It would have an adverse effect on the local landscape by adding a very substantial urban extension into an open and rural landscape. The proposed development would also have a very significant adverse effect on the carefully considered structural landscape proposals for existing and currently proposed developments in the area. The proposed layout of Northstowe and the existing transport infrastructure will make satisfactory visual connections between the two sites very difficult.
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	- / ---	Minor Negative Impact (development conflicts with townscape character, minor negative impacts incapable of mitigation) - Development would be very large in relation to the existing and proposed settlements and would adversely affect the landscape setting of Longstanton Oakington, Willingham and Rampton. Any benefits from enlarging the separation from Longstanton and Oakington will be countered by greater impact on Willingham and Rampton. The proposed layout of Northstowe and the existing transport infrastructure will make satisfactory visual connections between the two sites very difficult.
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Archaeological potential will require further information but the assumption for a neutral impact is that it is likely appropriate mitigation can be achieved through the development process.
	Create places, spaces and buildings that work well, wear well and look good	Will it lead to developments built to a high standard of design and good place making that reflects local character?		

Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	+++	Development would create significant additional opportunities for renewable energy. The assumption is that as a large extension to Northstowe it should be possible to continue the exemplar of sustainability standards.
		Will it promote energy efficiency?		
		Will it minimise contributions to climate change through sustainable construction practices?		
	Reduce vulnerability to future climate change effects	Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	0	The majority of the site is within Flood Zone 1 and no drainage issues that cannot be appropriately addressed. Only about 10% of the site is in Flood Zone 3a and a previous Masterplan identified these areas for uses such as open space, which are compatible with the flood risk potential.
		Will it minimise the likely impacts of climate change on the development through appropriate design?		
		Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?		
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?		
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?		
Inclusive Communities - Housing	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	+	Development would create minor opportunities for new public open space as the promoter proposes provision of open space as part of the development.
	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?		
		Will it provide for housing for the ageing population?		
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	No effect on pitch or plot provision.

Inclusive Communities - Redressing inequalities and involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	+	New settlement - a major extension to Northstowe.
		Sub-Indicator: Distance to centre	0	Centre point of site beyond 1000m of nearest existing centre Majority of site would be within 800m of any new local centre developed as part of site.
		Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	+	New facilities or improved existing facilities are proposed of minor benefit. The promoter proposes an employment-led development, a local centre and open space, plus necessary infrastructure such as an expanded park and ride site and highway and drainage works. The assumption is these will largely serve new residents.
		Will it improve relations between people from different backgrounds or social groups?		
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will it redress inequalities?		
		Will it increase the ability of people to influence decisions, including 'hard to reach' groups?		
	Encourage and enable the active involvement of local people in community activities	Will it encourage engagement with community activities?	+	New facilities or improved existing facilities are proposed of minor benefit. The promoter proposes an employment-led development, a local centre and open space, plus necessary infrastructure such as an expanded park and ride site and highway and drainage works. The assumption is these will largely serve new residents.

Economic Activity		Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	+++	Development would significantly enhance employment opportunities.
	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	Development would have no effect on vitality or viability of existing centres. The assumption is that the local centre proposed will only be of a suitable scale to serve needs of new residents and will not impact on other centres.
		Will it encourage the rural economy and diversification, and support sustainable tourism?		
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it contribute to providing a range of employment opportunities, in accessible locations?	+	24.74 minutes from site to nearest employment area with 2000+ employees. 5 employment areas with 2000+ employees that can be accessed in less than 30mins - 1.6km walk.
		Will it improve the level of investment in key community services and infrastructure, including broadband?	-	Major utilities Infrastructure improvements required, but constraints can be addressed. Significant reinforcement and new network is required for electricity provision. There is insufficient spare mains water capacity within the distribution zone to supply the number of proposed properties which could arise if all the SHLAA sites within the zone were to be developed. Gas will require a Pressure Reduction Station to be built to allow a local low pressure infrastructure to be laid around the developments. The sewerage network is approaching capacity and will require investigation and mitigation.
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve access to education and training, and support provision of skilled employees to the economy?	0	As an extension of Northstowe children within the development would attend one of the seven proposed primary schools and the proposed secondary school that are identified in the Development Framework Document to serve the new town. As the reserve land would be one of the last phases of Northstowe to be developed the capacity of these schools, and their ability to extend would need to be assessed nearer the time. As the DFD is considering this site the location of schools, and their site size will be taken into account.

Transport	Reduce the need to travel and promote more sustainable transport choices.	Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	+	Total score of 17.
		Sub-indicator: Distance to bus stop / rail station	0	New settlement would require new bus stops which would mostly fall within 800m of the site. 872m ACF from the centre of the site to the nearest guided busway stop (Longstanton).
		Sub-indicator: Frequency of Public Transport	+++	Guided Busway - 10 Minute Service.
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	+	Guided Busway - 23 Minutes to Cambridge; Guided Busway - 10 Minutes to St. Ives.
		Sub-indicator: Distance for cycling to City Centre or Market Town	0	10.14km ACF from the centre of the site to St. Ives Market. 10.27km ACF from the centre of the site to Cambridge Market.
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	--- / -	Insufficient capacity or access constraints that cannot be adequately mitigated. Site will be heavily reliant on the A14 for strategic access. It is difficult to see more than a small proportion of the sites in this area being deliverable prior to major improvements to the A14, and even this could require substantial mitigation measures. Capacity on the B1050 may become an issue as the core area of Northstowe is developed - the Highway Authority is considering access to this site as part of the Phase I of the Northstowe site. The promoter contends that with the extension to Northstowe it has the potential to be self-contained, in terms of meeting the needs of its population locally, and minimising out-commuting and car journeys.
		Will it make the transport network safer for and promote use of non-motorised modes?	+++	Would result in significant improvement to public transport, walking or cycling facilities. The Highway Authority will require new development to provide or contribute to the provision of infrastructure to encourage more sustainable transport links both on and off site. This is a large site, so provision or contribution from this site would result in significant improvement to public transport, walking or cycling facilities.

Site No. Site 275
Address Old East Goods Yard, Station Road, Oakington
Location Northstowe
Category of site Northstowe
Site area 0.59

Theme	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	+	The whole of this small site is previously developed land.
		Will it use land efficiently?		
		Will it protect and enhance the best and most versatile agricultural land?	0	Development would not affect best and most versatile agricultural land (Grades 1 and 2).
		Will it avoid the sterilisation of economic mineral reserves? Will it minimise the degradation/loss of soils due to new development?	0	Site not within an area designated in the Minerals and Waste LDF.
	Minimise waste production and support the reuse and recycling of waste products	Will it encourage reduction in household waste, and increase waste recovery and recycling?		
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	0	Development unlikely to impact on air quality. Site lies in an area where air quality acceptable.
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	---	Will create significant negative impacts to, or as a result of, the development, incapable of adequate mitigation. The site is immediately adjacent to and runs parallel to CGB. Due to the close proximity to the CGB and the physical constraints of the site dimensions 305m long and 16m wide, noise and vibration impacts are paramount considerations.
		Will it minimise, and where possible address, land contamination?	+	Site is adjacent to the guided busway (old railway) & previous military land and was commercial use. Potential for minor benefits through remediation of minor contamination
		Will it protect and where possible enhance the quality of the water environment?	0	Assumptions for a neutral impact are that appropriate standards and pollution control measures will achieved through the development process, e.g. as part of Sustainable Drainage Systems (Suds).
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiversity?	0	No impact on protected sites and species (or impacts could be mitigated). Adjacent to a County Wildlife Site alongside the Cambridgeshire Guided Busway. Greatest impact likely to result from human disturbance of currently inaccessible farmland habitats. Badgers within Fish Ponds Wood may be an issue.
	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	0	Assumptions for a neutral impact are that existing features that warrant retention can be retained or appropriate mitigation will be achieved through the development process.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	+	Development would create minor opportunities for new Green Infrastructure as it is possible to link to bridleway along the Guided Busway.

Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	-	Minor Negative Impact (Development conflicts with landscape character, minor negative impacts incapable of mitigation) - This pattern of development would be totally alien and out of keeping with the existing linear pattern of development, which would introduce dwellings on the edge of the Conservation Area, altering the relationship of the existing settlement pattern to the open countryside between the development and the village, and a soft, integrated edge treatment.
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	---	Significant Negative Impact (Development conflicts with townscape character, with significant negative impacts incapable of mitigation) - This site is unsuitable for backland development given the historically sensitive nature of the area. This pattern of development would be totally alien and out of keeping with the existing linear pattern of development, which would introduce dwellings on the edge of the Conservation Area, altering the relationship of the existing settlement pattern to the open countryside
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	---	Significant Negative Impact on historic Assets (incapable of satisfactory mitigation) - site forms an important part of the setting of the Grade II Listed Westwick Hall and Westwick Hall Farmhouse, Westwick Conservation Area, and the historic core of the village. Archaeological potential will require further information but it is likely appropriate mitigation can be achieved through the development process. Neutral impact (existing features retained, or appropriate mitigation possible).
	Create places, spaces and buildings that work well, wear well and look good	Will it lead to developments built to a high standard of design and good place making that reflects local character?		
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	0	Standard requirements for renewables would apply.
		Will it promote energy efficiency?		
		Will it minimise contributions to climate change through sustainable construction practices?		
	Reduce vulnerability to future climate change effects	Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	-	The whole site is within Flood Zones 2 and 3, drainage issues capable of being appropriately addressed
		Will it minimise the likely impacts of climate change on the development through appropriate design?		
Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?				
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?		
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?		

Inclusive Communities - Housing	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	+	Development would create minor opportunities for new public open space as the promoter includes allotments or recreation ground as part of the development.
	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?		
		Will it provide for housing for the ageing population?		
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	No effect on pitch or plot provision.
Inclusive Communities - Redressing inequalities and involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	---	Site in infill village but would be close to a new settlement of Northstowe, but on the opposite side of the Guided Busway.
		Sub-Indicator: Distance to centre	---	Centre point of site beyond 1000m of nearest existing centre - oakington. Note - site would not generate it's own centre
		Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	0	No facilities lost, and no new facilities proposed directly as a result of the development. Promoter proposes community uses, but this is a small site and close to Northstowe.
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will improve relations between people from different backgrounds or social groups?		
		Will it redress inequalities?		
	Encourage and enable the active involvement of local people in community activities	Will it increase the ability of people to influence decisions, including 'hard to reach' groups?		
Will it encourage engagement with community activities?		0	No facilities lost, and no new facilities proposed directly as a result of the development.	

Economic Activity		Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	0	Development would have no effect on employment land or premises. There will be a loss of some employment (B8 uses), but the promoter proposes new A2 & B1 employment uses.
	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	Development would have no effect on vitality or viability of existing centres. The assumption is that the local centre proposed will only be of a suitable scale to serve needs of new residents and will not impact on other centres.
		Will it encourage the rural economy and diversification, and support sustainable tourism?		
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it contribute to providing a range of employment opportunities, in accessible locations?	+++	13.88 minutes from site to nearest employment area with 2000+ employees. 9 employment areas with 2000+ employees that can be accessed in less than 30mins - 1.6km walk.
		Will it improve the level of investment in key community services and infrastructure, including broadband?	+	There is insufficient spare mains water capacity within the distribution zone to supply the number of proposed properties which could arise if all the SHLAA sites within the zone were to be developed. The WWTW is operating close to capacity and the sewerage network is at capacity and both will require mitigation.
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve access to education and training, and support provision of skilled employees to the economy?	+	Insufficient spare school capacity but potential for improvement to meet needs.

Transport	Reduce the need to travel and promote more sustainable transport choices.	Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	+++	Total score of 20.
		Sub-indicator: Distance to bus stop / rail station	+++	206m ACF from the centre of the site to the nearest guided busway stop.
		Sub-indicator: Frequency of Public Transport	+++	Guided Busway - 10 Minute Service.
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	+	Guided Busway - 23 Minutes to Cambridge; Guided Busway - 10 Minutes to St. Ives.
		Sub-indicator: Distance for cycling to City Centre or Market Town	+	11.91km ACF from the centre of the site to St. Ives Market. 7.49km ACF from the centre of the site to Cambridge Market.
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	--- / -	Insufficient capacity or access constraints that cannot be adequately mitigated. The Highways Agency comment that this site is in an area heavily reliant on the A14 for strategic access. It is difficult to see more than a small proportion of these sites being deliverable prior to major improvements to the A14, and even this could require substantial mitigation measures.
		Will it make the transport network safer for and promote use of non-motorised modes?	0	No impact.

Site No. Site 276
Address Land adjacent to Paynes Meadow, Linton
Location Linton
Category of site Minor Rural Centre
Site area 0.83

Theme	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	0	No previously developed land.
		Will it use land efficiently?		
		Will it protect and enhance the best and most versatile agricultural land?	0	Development would not affect best and most versatile agricultural land (Grades 1 and 2).
		Will it avoid the sterilisation of economic mineral reserves? Will it minimise the degradation/loss of soils due to new development?	0	Site not within an area designated in the Minerals and Waste LDF.
	Minimise waste production and support the reuse and recycling of waste products	Will it encourage reduction in household waste, and increase waste recovery and recycling?		
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	0	Development unlikely to impact on air quality. Site lies in an area where air quality acceptable.
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	0	Development compatible with neighbouring uses.
		Will it minimise, and where possible address, land contamination?	0	Development not on land likely to be contaminated.
		Will it protect and where possible enhance the quality of the water environment?	0	Development unlikely to affect water quality. The site within GroundwaterSource Protection Zone 2 which does not rule out development but may influence land use or require pollution control measures. Assumptions for a neutral impact are that appropriate standards and pollution control measures will achieved through the development process and will mitigate any impact on groundwater, e.g. as part of Sustainable Drainage Systems (Suds).
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiversity?	0	No impact on protected sites and species (or impacts could be mitigated).
	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	0	Assumptions for a neutral impact are that existing features that warrant retention can be retained or appropriate mitigation will be achieved through the development process.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process.

Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	---	Significant Negative Impact (Development conflicts with landscape character, with significant negative impacts incapable of mitigation) - the site is prominently located on the slopes of Rivey Hill that is an important part of the landscape setting of Linton.
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	0	Neutral impact (generally compatible, or capable of being made compatible with local townscape character). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process. Limited development along southern edge of site could result in opportunity to improve existing harsh edge to village.
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	-	Minor Negative Impact on historic Assets (incapable of satisfactory mitigation). Development of site would impact on views from historic centre and ones across the village thereby affecting setting of Conservation Area and numerous listed buildings. Site on prominent slopes of Rivey Hill as backdrop to list buildings. Archaeological potential will require further information but the assumption for a neutral impact is that it is likely appropriate mitigation can be achieved through the development process.
	Create places, spaces and buildings that work well, wear well and look good	Will it lead to developments built to a high standard of design and good place making that reflects local character?		
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	0	Standard requirements for renewables would apply.
		Will it promote energy efficiency?		
	Reduce vulnerability to future climate change effects	Will it minimise contributions to climate change through sustainable construction practices?		
		Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	0	Flood Zone 1 and no drainage issues that cannot be appropriately addressed.
		Will it minimise the likely impacts of climate change on the development through appropriate design?		
	Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?			
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?		
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?		

Inclusive Communities - Housing	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	0	Neutral impact (existing features retained or appropriate mitigation).
	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?		
		Will it provide for housing for the ageing population?		
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	No effect on pitch or plot provision.
Inclusive Communities - Redressing inequalities and involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	0	Minor Rural Centre
		Sub-Indicator: Distance to centre	+	582m ACF to the High Street - location chosen as representation of central point of these services and facilities.
		Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	0	No facilities lost, and no new facilities proposed directly as a result of the development.
		Will improve relations between people from different backgrounds or social groups?		
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will it redress inequalities?		
		Will it increase the ability of people to influence decisions, including 'hard to reach' groups?		
	Encourage and enable the active involvement of local people in community activities	Will it encourage engagement with community activities?	0	No facilities lost, and no new facilities proposed directly as a result of the development.

Economic Activity		Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	0	Development would have no effect on employment land or premises.
	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	Development would have no effect on vitality or viability of existing centres. The indicator is likely to apply particularly to sites which include retail, offices, or leisure uses.
		Will it encourage the rural economy and diversification, and support sustainable tourism?		
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it contribute to providing a range of employment opportunities, in accessible locations?	0	32.16 minutes from site to nearest employment area with 2000+ employees. No employment areas with 2000+ employees that can be accessed in less than 30mins - 1.6km walk.
		Will it improve the level of investment in key community services and infrastructure, including broadband?	-	Major utilities Infrastructure improvements required, but constraints can be addressed. There is insufficient spare mains water capacity within the distribution zone to supply the number of proposed properties which could arise if all the SHLAA sites within the zone were to be developed. The demand for electricity from the development is likely to trigger local 11,000 volt reinforcement. The sewage network is approaching capacity.
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve access to education and training, and support provision of skilled employees to the economy?	-	School capacity not sufficient, but significant issues be adequately addressed

Transport	Reduce the need to travel and promote more sustainable transport choices.	Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	0	Total score of 14.
		Sub-indicator: Distance to bus stop / rail station	+	597m ACF from the centre of the site to nearest bus stop.
		Sub-indicator: Frequency of Public Transport	0	30 Minute Service.
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	0	31 Minutes from Linton to Cambridge.
		Sub-indicator: Distance for cycling to City Centre or Market Town	+	9.24km ACF from the centre of the site to St. Ives Market.
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	---	Insufficient capacity or access constraints that cannot be adequately mitigated. Highway Authority has severe concerns with regards to the accident record of the A1307 and therefore before the proposed scheme comes forward a detailed analysis of access points onto the A1307 will need to be completed.
		Will it make the transport network safer for and promote use of non-motorised modes?	0	No impact

Site No. Site 277
Address Land to the rear of 48 - 56 West Drive, Highfields, Caldecote
Location Caldecote
Category of site Group Village
Site area 2.62

Theme	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	0	A small area of the site is previously developed land as the site includes three dwellings.
		Will it use land efficiently?		
		Will it protect and enhance the best and most versatile agricultural land?	0	Development would not affect the best and most versatile agricultural land (Grades 1 and 2).
		Will it avoid the sterilisation of economic mineral reserves? Will it minimise the degradation/loss of soils due to new development?	0	Site not within an area designated in the Minerals and Waste LDF.
	Minimise waste production and support the reuse and recycling of waste products	Will it encourage reduction in household waste, and increase waste recovery and recycling?		
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	0	Development unlikely to impact on air quality. Site lies in an area where air quality acceptable.
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	---/-	Significant negative impacts to or as a result of the development that are incapable of mitigation. The site is close to industrial units and offsite mitigation is likely to be required.
		Will it minimise, and where possible address, land contamination?	0/+	The site would require investigation due as it is adjacent to military land and is agricultural / commercial land. Potential for benefits through remediation of any contamination.
		Will it protect and where possible enhance the quality of the water environment?	0	Development unlikely to affect water quality. Assumptions for neutral impact are that appropriate standards and pollution control measures will be achieved through the development process, e.g. as part of Sustainable Drainage Systems (SuDS).
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiversity?	0	No impact on protected sites or species (or impacts could be mitigated).
	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	0	Assumptions for a neutral impact are that existing features that warrant retention can be retained or appropriate mitigation will be achieved through the development process.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process.

Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	-	Minor Negative Impact (Development conflicts with landscape character, minor negative impacts incapable of mitigation) - All nearby development has been built over recent years and is of a suburban nature. If the site were to be developed it would impact on the character of the surrounding countryside.
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	0	Neutral impact (generally compatible, or capable of being made compatible with local townscape character). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process.
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Archaeological potential will require further information but the assumption for a neutral impact is that it is likely appropriate mitigation can be achieved through the development process.
	Create places, spaces and buildings that work well, wear well and look good	Will it lead to developments built to a high standard of design and good place making that reflects local character?		
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	0	Standard requirements for renewables would apply.
		Will it promote energy efficiency?		
		Will it minimise contributions to climate change through sustainable construction practices?		
	Reduce vulnerability to future climate change effects	Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	0	Flood Zone 1 and no drainage issues that cannot be appropriately addressed. There are no suitable surface water drainage facilities, however this could be addressed through the provision of a new drain.
		Will it minimise the likely impacts of climate change on the development through appropriate design?		
Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?				
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?		
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?		

Inclusive Communities - Housing	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	0	Neutral impact (existing features retained or appropriate mitigation).
	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?		
		Will it provide for housing for the ageing population?		
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	No effect on pitch or plot provision.
Inclusive Communities - Redressing inequalities and involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	-	Group Village
		Sub-Indicator: Distance to centre	+	498m ACF to Main Street which is surrounded by a cluster of services and facilities within the village.
		Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	0	No facilities lost, and no new facilities proposed directly as a result of the development.
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will improve relations between people from different backgrounds or social groups?		
		Will it redress inequalities?		
		Will it increase the ability of people to influence decisions, including 'hard to reach' groups?		
	Encourage and enable the active involvement of local people in community activities	Will it encourage engagement with community activities?	0	No facilities lost, and no new facilities proposed directly as a result of the development.

Economic Activity		Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	0	Development would have no effect on employment land or premises.
	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	Development would have no effect on vitality or viability of existing centres. The indicator is likely to apply particularly to sites which include retail, offices, or leisure uses.
		Will it encourage the rural economy and diversification, and support sustainable tourism?		
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it contribute to providing a range of employment opportunities, in accessible locations?	+	26.68 minutes from site to nearest employment area with 2000+ employees. Only 1 employment area with 2000+ employees that can be accessed in less than 30mins - 1.6km walk.
		Will it improve the level of investment in key community services and infrastructure, including broadband?	+/-	Major utilities infrastructure improvements required, but constraints can be addressed. There is no spare mains water capacity within the distribution zone. The WwTW is operating at capacity and will require new consent limits and major capital expenditure to accommodate development of this site. The sewerage network is at capacity and a developer impact assessment will be required to ascertain the required upgrades necessary.
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve access to education and training, and support provision of skilled employees to the economy?	-	School capacity not sufficient, but significant issues can be adequately addressed.

Transport	Reduce the need to travel and promote more sustainable transport choices.	Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	+	Total score of 17.
		Sub-indicator: Distance to bus stop / rail station	0	740m ACF from the centre of the site to the nearest bus stop (Citi 4). 324m ACF from the centre of the site to the nearest bus stop (14 Service).
		Sub-indicator: Frequency of Public Transport	+	20 Minute service (Citi 4). Less than hourly service (14 Service).
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	+++	20 Mintues from Caldecote to Cambridge (Citi 4). 54 Minutes from Caldecote to Cambridge (14 Service).
		Sub-indicator: Distance for cycling to City Centre or Market Town	+	9.81km ACF from the centre of the site to Cambridge Market.
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	-	Minor negative effects incapable of mitigation. Safe access to the highway can be achieved, however development could have an impact on A428 with potential capacity issues at the Cambourne Junction and on the corridor between Cambridge and St. Neots / Bedford, particularly junctions at either end of this section.
		Will it make the transport network safer for and promote use of non-motorised modes?	0	No impact.

Site No. Site 278
Address Highways Agency Depot, Station Road East, Whittlesford Bridge
Location Whittlesford Bridge
Category of site Group Village
Site area 2.28

Theme	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	+++	The majority of the site is previously developed land comprising a variety of industrial and commercial buildings and hardstanding.
		Will it use land efficiently?		
		Will it protect and enhance the best and most versatile agricultural land?	-	Minor loss of best and most versatile agricultural land (Grades 1 and 2) - some loss Grade 2.
	Will it avoid the sterilisation of economic mineral reserves? Will it minimise the degradation/loss of soils due to new development?	0	Site within an area designated in the Minerals and Waste LDF but development would not have a negative impact	
Minimise waste production and support the reuse and recycling of waste products	Will it encourage reduction in household waste, and increase waste recovery and recycling?			
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	0	Development unlikely to impact on air quality. Site lies in an area where air quality acceptable.
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	-	Development compatible with neighbouring uses. Commercial to west. A505 to south. However existing residential already in close proximity so minor to medium risk
		Will it minimise, and where possible address, land contamination?	+	Site was formerly used for highway depot and may have contaminated land. Potential for minor benefits through remediation of minor contamination
		Will it protect and where possible enhance the quality of the water environment?	0	Development unlikely to affect water quality. The site within Groundwater Source Protection Zone 3 which does not rule out development but may influence land use or require pollution control measures. Assumptions for a neutral impact are that appropriate standards and pollution control measures will be achieved through the development process and will mitigate any impact on groundwater,
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiversity?	0	No impact on protected sites and species (or impacts could be mitigated).
	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	0	Assumptions for a neutral impact are that existing features that warrant retention can be retained or appropriate mitigation will be achieved through the development process.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process.

Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	0	Neutral impact (generally compatible, or capable of being made compatible with local landscape character). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process. Redevelopment of this depot site would remove commercial buildings and areas of hardstanding, improving the townscape. However, to the east of the railway line there is very little residential development and this is a large site, which would have a negative impact on the character of this part of the village.
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	---	Significant Negative Impact (Development conflicts with townscape character, with significant negative impacts incapable of mitigation) - Redevelopment of this depot site would remove commercial buildings and areas of hardstanding, improving the townscape. However, to the east of the railway line there is very little residential development and this is a large site, which would have a negative impact on the character of this part of the village.
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	---	Significant Negative Impact on historic Assets (incapable of satisfactory mitigation) - The site forms an important part of the setting a Grade II* and II Listed Building. Archaeological potential will require further information but it is likely appropriate mitigation can be achieved through the development process.
	Create places, spaces and buildings that work well, wear well and look good	Will it lead to developments built to a high standard of design and good place making that reflects local character?		
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	0	Standard requirements for renewables would apply.
		Will it promote energy efficiency?		
		Will it minimise contributions to climate change through sustainable construction practices?		
	Reduce vulnerability to future climate change effects	Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	0	Flood Zone 1 and no drainage issues that cannot be appropriately addressed.
		Will it minimise the likely impacts of climate change on the development through appropriate design?		
	Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?			
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?		
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?		
	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	0	Neutral impact (existing features retained or appropriate mitigation). Assumption is standard requirements for open space would apply.

Inclusive Communities - Housing	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?		
		Will it provide for housing for the ageing population?		
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	No effect on pitch or plot provision.
Inclusive Communities - Redressing Inequalities and Involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	-	Group village
		Sub-Indicator: Distance to centre	---	Beyond 1000m from the centre of the to the nearest centre - Duxford.
		Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	0	No facilities lost, and no new facilities proposed directly as a result of the development.
		Will improve relations between people from different backgrounds or social groups?		
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will it redress inequalities?		
		Will it increase the ability of people to influence decisions, including 'hard to reach' groups?		
Encourage and enable the active involvement of local people in community activities	Will it encourage engagement with community activities?	0	No facilities lost, and no new facilities proposed directly as a result of the development.	

Economic Activity		Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?		
	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?		
		Will it encourage the rural economy and diversification, and support sustainable tourism?	0	No facilities lost, and no new facilities proposed directly as a result of the development.
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it contribute to providing a range of employment opportunities, in accessible locations?	+	22.33 minutes from site to nearest employment area with 2000+ employees. 4 employment areas with 2000+ employees can be accessed in less than 30mins - 1.6km walk.
		Will it improve the level of investment in key community services and infrastructure, including broadband?		
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve access to education and training, and support provision of skilled employees to the economy?	-	Development would have a minor negative effect on employment opportunities, as a result of the loss of existing employment land. Loss of highway depot.

Transport		Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	+	Total score of 18.
	Reduce the need to travel and promote more sustainable transport choices.	Sub-indicator: Distance to bus stop / rail station	+++	382m ACF from the centre of the site to train station.
		Sub-indicator: Frequency of Public Transport	0	Train - 30 minute service
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	+++	Train - 11 minutes to Cambridge
		Sub-indicator: Distance for cycling to City Centre or Market Town	0	10.62km ACF from the centre of the site to Saffron Walden Market.
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	0	No capacity constraints identified, safe access can be achieved.
		Will it make the transport network safer for and promote use of non-motorised modes?	0	No impact.

Site No. Site 279
Address Land at Black Pit Drove / Rampton Road, Willingham
Location Willingham
Category of site Minor Rural Centre
Site area 0.85

Theme	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	0	No previously developed land.
		Will it use land efficiently?		
		Will it protect and enhance the best and most versatile agricultural land?	-	Minor loss of best and most versatile agricultural land (Grades 1 and 2) - small site but all Grade 1.
	Minimise waste production and support the reuse and recycling of waste products	Will it avoid the sterilisation of economic mineral reserves? Will it minimise the degradation/loss of soils due to new development?	0	Site within an area designated in the Minerals and Waste LDF but development would not have a negative impact
Will it encourage reduction in household waste, and increase waste recovery and recycling?				
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	0	Development unlikely to impact on air quality. Site lies in an area where air quality acceptable.
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	-	Will create minor negative impacts to, or as a result of, the development, with minor negative impacts incapable of mitigation - west of the site is operational nurseries at 134 Rampton Road & agricultural uses to the south east at Anstee Farm Black Pit Drove. These are medium to large sized industrial type units / uses including light industrial and warehouse type uses. These are unlikely to be considered compatible uses. Noise from activities and vehicle movements are material considerations with significant negative impact potential in terms of health and well being and a poor quality living environment and possible noise nuisance
		Will it minimise, and where possible address, land contamination?	+	Part of the site was formerly used for agricultural / commercial use and may have contaminated land. Potential for minor benefits through remediation of minor contamination
		Will it protect and where possible enhance the quality of the water environment?	0	Assumptions for a neutral impact are that appropriate standards and pollution control measures will be achieved through the development process, e.g. as part of Sustainable Drainage Systems (Suds).
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiversity?	0	No impact on protected sites and species (or impacts could be mitigated).
	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	0	Assumptions for a neutral impact are that existing features that warrant retention can be retained or appropriate mitigation will be achieved through the development process.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process.

Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	-	Minor Negative Impact (Development conflicts with landscape character, minor negative impacts incapable of mitigation) - Nearer to Willingham, the setting is more enclosed with smaller fields, paddocks, horticulture, orchards, glasshouses and a caravan park. These transition areas between the village and more open Fen Edge landscape beyond form an intricate patchwork setting and also contain numerous trees along hedgelines and in groups. The site forms part of the 'transition' area between the village and the open countryside and development would have a detrimental impact on the linear and rural character of this part of the village.
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	-	Minor Negative Impact (development conflicts with townscape character, minor negative impacts incapable of mitigation) - The site is within an area characterised as linear housing framed by long strips of horticulture and fields. There is a rural approach to the village, with scattered houses and farmsteads along Rampton Road. Development of this site would create an area of backland development within existing ribbon development south east of the village. It would have a detrimental impact on the linear and rural character of this part of the village.
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Archaeological potential will require further information but the assumption for a neutral impact is that it is likely appropriate mitigation can be achieved through the development process.
	Create places, spaces and buildings that work well, wear well and look good	Will it lead to developments built to a high standard of design and good place making that reflects local character?		
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	0	Standard requirements for renewables would apply.
		Will it promote energy efficiency?		
		Will it minimise contributions to climate change through sustainable construction practices?		
	Reduce vulnerability to future climate change effects	Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	0	Flood Zone 1 and no drainage issues that cannot be appropriately addressed.
		Will it minimise the likely impacts of climate change on the development through appropriate design?		
Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?				
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?		
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?		

Inclusive Communities - Housing	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	0	Neutral impact (existing features retained or appropriate mitigation).
	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?		
		Will it provide for housing for the ageing population?		
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	No effect on pitch or plot provision.
Inclusive Communities - Redressing inequalities and involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	0	Minor Rural Centre
		Sub-Indicator: Distance to centre	---	1,171m ACF to the High Street - location chosen as representation of central point of these services and facilities.
		Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	0	No facilities lost, and no new facilities proposed directly as a result of the development.
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will improve relations between people from different backgrounds or social groups?		
		Will it redress inequalities?		
		Will it increase the ability of people to influence decisions, including 'hard to reach' groups?		
Encourage and enable the active involvement of local people in community activities	Will it encourage engagement with community activities?	0	No facilities lost, and no new facilities proposed directly as a result of the development.	

Economic Activity		Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	0 / +	Development would have no effect on employment land or premises. Promoter also suggests site has potential for light industry, which may be possible to the rear of the site, away from residential premises.
	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	Development would have no effect on vitality or viability of existing centres. The indicator is likely to apply particularly to sites which include retail, offices, or leisure uses.
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it encourage the rural economy and diversification, and support sustainable tourism?		
		Will it contribute to providing a range of employment opportunities, in accessible locations?	+	28.70 minutes from site to nearest employment area with 2000+ employees. Only 1 employment area with 2000+ employees can be accessed in less than 30mins - 1.6km walk.
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve the level of investment in key community services and infrastructure, including broadband?	+++	Development can use existing capacity in utilities infrastructure. However, the sewerage network is approaching capacity and will require investigation and possibly mitigation.
		Will it improve access to education and training, and support provision of skilled employees to the economy?	-	Insufficient spare school capacity but potential for improvement to meet needs. Insufficient secondary school capacity.

Transport	Reduce the need to travel and promote more sustainable transport choices.	Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	0	Total score of 11.
		Sub-indicator: Distance to bus stop / rail station	-	877m ACF from the centre of the site to nearest bus stop (Citi 5).
		Sub-indicator: Frequency of Public Transport	-	Citi 5 has an hourly service.
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	0	Citi 5 Bus service takes 41 minutes from Willingham to Cambridge. Citi 5 Bus service takes 38 minutes from Willingham to St. Ives.
		Sub-indicator: Distance for cycling to City Centre or Market Town	+	9.59km ACF from the centre of the site to St. Ives Market.
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	--- / -	Insufficient capacity or access constraints that cannot be adequately mitigated. The Highways Agency comment that this site is in an area heavily reliant on the A14 for strategic access. It is difficult to see more than a small proportion of these sites being deliverable prior to major improvements to the A14, and even this could require substantial mitigation measures.
		Will it make the transport network safer for and promote use of non-motorised modes?	0	No impact.

Site No. Site 280
Address Land behind 10-16 Old House Road, Balsham
Location Balsham
Category of site Group Village
Site area 1.16

Theme	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	0	No previously developed land.
		Will it use land efficiently?		
		Will it protect and enhance the best and most versatile agricultural land?	-	Minor loss of best and most versatile agricultural land (Grades 1 and 2) - small site but all Grade 2.
		Will it avoid the sterilisation of economic mineral reserves? Will it minimise the degradation/loss of soils due to new development?	0	Site not within an area designated in the Minerals and Waste LDF.
	Minimise waste production and support the reuse and recycling of waste products	Will it encourage reduction in household waste, and increase waste recovery and recycling?		
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	0	Development unlikely to impact on air quality. Site lies in an area where air quality acceptable.
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	-	Development compatible with neighbouring uses. Some minor to moderate additional road traffic noise generation impact on existing residential due to development related car movements but dependent on location of site entrance
		Will it minimise, and where possible address, land contamination?	0	Development not on land likely to be contaminated.
		Will it protect and where possible enhance the quality of the water environment?	0	Development unlikely to affect water quality. The site within Groundwater Source Protection Zone 3 which does not rule out development but may influence land use or require pollution control measures. Assumptions for a neutral impact are that appropriate standards and pollution control measures will be achieved through the development process and will mitigate any impact on groundwater,
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiversity?	0	No impact on protected sites and species (or impacts could be mitigated).
	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	0	Assumptions for a neutral impact are that existing features that warrant retention can be retained or appropriate mitigation will be achieved through the development process.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process.

Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	---	Significant Negative Impact (Development conflicts with landscape character, with significant negative impacts incapable of mitigation) - site has a rural character and is part of the open countryside to the east of the village.
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	0	Neutral impact (generally compatible, or capable of being made compatible with local townscape character). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process.
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Archaeological potential will require further information but the assumption for a neutral impact is that it is likely appropriate mitigation can be achieved through the development process.
	Create places, spaces and buildings that work well, wear well and look good	Will it lead to developments built to a high standard of design and good place making that reflects local character?		
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	0	Standard requirements for renewables would apply.
		Will it promote energy efficiency?		
		Will it minimise contributions to climate change through sustainable construction practices?		
	Reduce vulnerability to future climate change effects	Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	0	Flood Zone 1 and no drainage issues that cannot be appropriately addressed.
		Will it minimise the likely impacts of climate change on the development through appropriate design?		
		Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?		
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?		
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?		

Inclusive Communities - Housing	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	0	Neutral impact (existing features retained or appropriate mitigation).
	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?		
		Will it provide for housing for the ageing population?		
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	No effect on pitch or plot provision.
Inclusive Communities - Redressing inequalities and involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	-	Group Village
		Sub-Indicator: Distance to centre	0	674m ACF to the Black Bull pub, which is central to the village, surrounded by other services and facilities.
		Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	0	No facilities lost, and no new facilities proposed directly as a result of the development.
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will improve relations between people from different backgrounds or social groups?		
		Will it redress inequalities?		
	Encourage and enable the active involvement of local people in community activities	Will it increase the ability of people to influence decisions, including 'hard to reach' groups?		
Will it encourage engagement with community activities?		0	No facilities lost, and no new facilities proposed directly as a result of the development.	

Economic Activity		Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	0	Development would have no effect on employment land or premises
	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	Development would have no effect on vitality or viability of existing centres. The indicator is likely to apply particularly to sites which include retail, offices, or leisure uses.
		Will it encourage the rural economy and diversification, and support sustainable tourism?		
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it contribute to providing a range of employment opportunities, in accessible locations?	0	40.32 minutes from site to nearest employment area with 2000+ employees. No employment areas with 2000+ employees can be accessed in less than 30mins - 1.6km walk.
		Will it improve the level of investment in key community services and infrastructure, including broadband?	+	Minor Utilities Infrastructure improvements required, but constraints can be addressed. There is insufficient spare mains water capacity within the distribution zone to supply the number of proposed properties which could arise if all the SHLAA sites within the zone were to be developed. The sewerage network is approaching capacity and will require mitigation.
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve access to education and training, and support provision of skilled employees to the economy?	-	School capacity not sufficient, but significant issues can be adequately addressed

Transport	Reduce the need to travel and promote more sustainable transport choices.	Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	0	Total score of 12.
		Sub-indicator: Distance to bus stop / rail station	+	439m ACF from the centre of the site to the nearest bus stop.
		Sub-indicator: Frequency of Public Transport	---	Less than hourly service.
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	+	20 Minutes from Balsham to Haverhill
		Sub-indicator: Distance for cycling to City Centre or Market Town	+	9.26km ACF from the centre of the site to Haverhill Market.
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	---	Insufficient capacity or access constraints that cannot be adequately mitigated. The Highway Authority has concerns in relationship to the provision of suitable inter vehicle visibility splay for this site. There is a ransom strip relating to access of the site.
		Will it make the transport network safer for and promote use of non-motorised modes?	0	No impact.

Site No. Site 281
Address Land off Silverdale Close, Coton
Location Coton
Category of site Group Village
Site area 3.45

Theme	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	0	No previously developed land.
		Will it use land efficiently?		
		Will it protect and enhance the best and most versatile agricultural land?	0	Development would not affect best and most versatile agricultural land (Grades 1 and 2)
		Will it avoid the sterilisation of economic mineral reserves? Will it minimise the degradation/loss of soils due to new development?	0	Site not within an area designated in the Minerals and Waste LDF
	Minimise waste production and support the reuse and recycling of waste products	Will it encourage reduction in household waste, and increase waste recovery and recycling?		
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	0	Development unlikely to impact on air quality. Site lies in an area where air quality acceptable.
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	-	Development compatible with neighbouring uses. Some minor to moderate additional road traffic noise generation impact on existing residential due to development related car movements but dependent on location of site entrance
		Will it minimise, and where possible address, land contamination?	0	Development not on land likely to be contaminated.
		Will it protect and where possible enhance the quality of the water environment?	0	Development unlikely to affect water quality. Assumptions for a neutral impact are that appropriate standards and pollution control measures will be achieved through the development process, e.g. as part of Sustainable Drainage Systems (Suds).
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiversity?	0	No impact on protected sites and species (or impacts could be mitigated).
	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	0	Assumptions for a neutral impact are that existing features that warrant retention can be retained or appropriate mitigation will be achieved through the development process.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process.

Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	---	Significant Negative Impact (Development conflicts with landscape character, with significant negative impacts incapable of mitigation) -The site is pastureland which is rural in character and the site is clearly part of this countryside and part of land creating a rural setting for the village.
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	-	Minor Negative Impact (development conflicts with townscape character, minor negative impacts incapable of mitigation) - Further development in this area is likely to reduce the linear character of the village.
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	-	Minor Negative Impact on historic Assets (incapable of satisfactory mitigation) – adverse impact on setting of Manor Farmhouse due to effect on views across fields and Bin Brook edge. Adverse impact on setting of Conservation Area. Archaeological potential will require further information but it is likely appropriate mitigation can be achieved through the development process.
	Create places, spaces and buildings that work well, wear well and look good	Will it lead to developments built to a high standard of design and good place making that reflects local character?		
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	0	Standard requirements for renewables would apply.
		Will it promote energy efficiency?		
		Will it minimise contributions to climate change through sustainable construction practices?		
	Reduce vulnerability to future climate change effects	Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	0	Flood Zone 1 but edge of site beside Bin Brook is zone 2.
		Will it minimise the likely impacts of climate change on the development through appropriate design?		
Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?				
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?		
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?		

Inclusive Communities - Housing	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	0	Neutral impact (existing features retained or appropriate mitigation).
	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?		
		Will it provide for housing for the ageing population?		
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	No effect on pitch or plot provision.
Inclusive Communities - Redressing inequalities and involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	-	Group Village
		Sub-Indicator: Distance to centre	0	686m ACF to a point on High Street which is central in relation to the services and facilities within the village
		Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	0	No facilities lost, and no new facilities proposed directly as a result of the development.
		Will improve relations between people from different backgrounds or social groups?		
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will it redress inequalities?		
		Will it increase the ability of people to influence decisions, including 'hard to reach' groups?		
	Encourage and enable the active involvement of local people in community activities	Will it encourage engagement with community activities?	0	No facilities lost, and no new facilities proposed directly as a result of the development.

Economic Activity		Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	0	Development would have no effect on employment land or premises.
	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	Development would have no effect on vitality or viability of existing centres. The indicator is likely to apply particularly to sites which include retail, offices, or leisure uses.
		Will it encourage the rural economy and diversification, and support sustainable tourism?		
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it contribute to providing a range of employment opportunities, in accessible locations?	+	18.24 minutes from site to nearest employment area with 2000+ employees. 7 employment areas with 2000+ employees can be accessed in less than 30mins - 1.6km walk.
		Will it improve the level of investment in key community services and infrastructure, including broadband?	+	Minor Utilities Infrastructure improvements required, but constraints can be addressed. There is insufficient spare mains water capacity within the distribution zone to supply the number of proposed properties which could arise if all the SHLAA sites within the zone were to be developed. The WWTW is close to capacity and sewerage network is approaching capacity and both will require mitigation.
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve access to education and training, and support provision of skilled employees to the economy?	-	School capacity not sufficient, but significant issues can be adequately addressed

Transport	Reduce the need to travel and promote more sustainable transport choices.	Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	+	Total score of 18.
		Sub-indicator: Distance to bus stop / rail station	+++	270m ACF from the centre of the site to the nearest bus stop.
		Sub-indicator: Frequency of Public Transport	---	Less than hourly service.
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	+++	15 minutes Coton to Cambridge.
		Sub-indicator: Distance for cycling to City Centre or Market Town	+++	4.36km ACF from the centre of the site to Cambridge Market.
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	---	Insufficient capacity or access constraints that cannot be adequately mitigated. Highway Authority has identified that proposed site does not appear to have a direct link to the adopted public highway.
		Will it make the transport network safer for and promote use of non-motorised modes?	0	No impact

Site No. Site 282
Address Land off Hatton Road (B1050), Longstanton
Location Longstanton
Category of site Group Village
Site area 0.26

Theme	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	0	No previously developed land.
		Will it use land efficiently?		
		Will it protect and enhance the best and most versatile agricultural land?	0	Development would not affect best and most versatile agricultural land (Grades 1 and 2).
		Will it avoid the sterilisation of economic mineral reserves? Will it minimise the degradation/loss of soils due to new development?	0	Site not within an area designated in the Minerals and Waste LDF.
	Minimise waste production and support the reuse and recycling of waste products	Will it encourage reduction in household waste, and increase waste recovery and recycling?		
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	0	Development unlikely to impact on air quality. Site lies in an area where air quality acceptable.
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	-	Development compatible with neighbouring uses. Site close to the B1050 bypass - potential for noise.
		Will it minimise, and where possible address, land contamination?	0	Development not on land likely to be contaminated
		Will it protect and where possible enhance the quality of the water environment?	0	Assumptions for a neutral impact are that appropriate standards and pollution control measures will be achieved through the development process, e.g. as part of Sustainable Drainage Systems (Suds)
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiversity?	0	No impact on protected sites and species (or impacts could be mitigated).
	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	0	Assumptions for a neutral impact are that existing features that warrant retention can be retained or appropriate mitigation will be achieved through the development process. A group of protected trees lie opposite the site on the northern side of Hattons Road.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process. A footpath runs to the south west of the site and continues across Hattons Road to the north

Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	-	Minor Negative Impact (Development conflicts with landscape character, minor negative impacts incapable of mitigation) - The site forms a soft rural edge to the village, as an area of largely enclosed, informal grassland penetrating into the built up area. The approach from Hattons Road is rural in character and development in this location would have a detrimental impact on the rural character
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	-	Minor Negative Impact (development conflicts with townscape character, minor negative impacts incapable of mitigation) - The site forms a soft rural edge to the village, as an area of largely enclosed, informal grassland penetrating into the built up area. The approach from Hattons Road is rural in character and development in this location would have a detrimental impact on the rural character.
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Archaeological potential will require further information but the assumption for a neutral impact is that it is likely appropriate mitigation can be achieved through the development process.
	Create places, spaces and buildings that work well, wear well and look good	Will it lead to developments built to a high standard of design and good place making that reflects local character?		
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	0	Standard requirements for renewables would apply.
		Will it promote energy efficiency?		
		Will it minimise contributions to climate change through sustainable construction practices?		
	Reduce vulnerability to future climate change effects	Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	---	Flood Zone 3 (or other form of flood risk incapable of appropriate mitigation) - the whole site is within Flood Zone 3a.
		Will it minimise the likely impacts of climate change on the development through appropriate design?		
Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?				
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?		
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?		

Inclusive Communities - Housing	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	0	Neutral impact (existing features retained or appropriate mitigation). Assumption is standard requirements for open space would apply.
	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?		
		Will it provide for housing for the ageing population?		
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	No effect on pitch or plot provision.
Inclusive Communities - Redressing inequalities and involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	-	Group Village
		Sub-Indicator: Distance to centre	+++	178m from the centre of the site to a point along Hattons Park, a central point in the village surrounded by services and facilities.
		Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	0	No facilities lost, and no new facilities proposed directly as a result of the development.
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will improve relations between people from different backgrounds or social groups?		
		Will it redress inequalities?		
	Encourage and enable the active involvement of local people in community activities	Will it increase the ability of people to influence decisions, including 'hard to reach' groups?		
Will it encourage engagement with community activities?		0	No facilities lost, and no new facilities proposed directly as a result of the development.	

Economic Activity		Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	0	Development would have no effect on employment land or premises.
	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	Development would have no effect on vitality or viability of existing centres. The assumption is that the local centre proposed will only be of a suitable scale to serve needs of new residents and will not impact on other centres.
		Will it encourage the rural economy and diversification, and support sustainable tourism?		
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it contribute to providing a range of employment opportunities, in accessible locations?	+++	11.18 minutes from site to nearest employment area with 2000+ employees. 6 employment areas with 2000+ employees that can be accessed in less than 30mins - 1.6km walk.
		Will it improve the level of investment in key community services and infrastructure, including broadband?	+	Minor Utilities Infrastructure improvements required, but constraints can be addressed. There is insufficient spare mains water capacity within the distribution zone to supply the number of proposed properties which could arise if all the SHLAA sites within the zone were to be developed. The WWTW is operating close to capacity and the sewerage network is at capacity and both will require mitigation.
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve access to education and training, and support provision of skilled employees to the economy?	-	School capacity not sufficient, but significant issues can be adequately addressed. Insufficient primary and secondary school capacity.

Transport	Reduce the need to travel and promote more sustainable transport choices.	Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	+	Total score of 15.
		Sub-indicator: Distance to bus stop / rail station	+++	141m ACF from the centre of the site to the nearest bus stop.
		Sub-indicator: Frequency of Public Transport	-	Hourly Service
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	0	33 minutes from Longstanton to Cambridge
		Sub-indicator: Distance for cycling to City Centre or Market Town	+	8.65km ACF from the centre of the site to St. Ives Market.
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	---	Insufficient capacity or access constraints that cannot be adequately mitigated. The Highway Authority has concerns due to the possible creation of a cross road with Colesfield. Cross roads have a poor accident history in general.
		Will it make the transport network safer for and promote use of non-motorised modes?	0	No impact.

Site No. Site 285
Address Land adj to 83 Moorfield Road, Whittlesford Bridge
Location Whittlesford Bridge
Category of site Group Village
Site area 0.64

Theme	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	0	No previously developed land.
		Will it use land efficiently?		
		Will it protect and enhance the best and most versatile agricultural land?	-	Minor loss of best and most versatile agricultural land (Grades 1 and 2) - small site but all Grade 2 (0.64 ha.)
		Will it avoid the sterilisation of economic mineral reserves? Will it minimise the degradation/loss of soils due to new development?	0	Site not within an area designated in the Minerals and Waste LDF.
	Minimise waste production and support the reuse and recycling of waste products	Will it encourage reduction in household waste, and increase waste recovery and recycling?		
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	0	Development unlikely to impact on air quality. Site lies in an area where air quality acceptable.
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	-	Development compatible with neighbouring uses. Traffic noise from M11 and A505. Residential could be acceptable with high level of mitigation.
		Will it minimise, and where possible address, land contamination?	0	Development not on land likely to be contaminated.
		Will it protect and where possible enhance the quality of the water environment?	0	Development unlikely to affect water quality. The site within Groundwater Source Protection Zone 3 which does not rule out development but may influence land use or require pollution control measures. Assumptions for a neutral impact are that appropriate standards and pollution control measures will be achieved through the development process and will mitigate any impact on groundwater,
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiversity?	0	No impact on protected sites and species (or impacts could be mitigated).
	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	0	Assumptions for a neutral impact are that existing features that warrant retention can be retained or appropriate mitigation will be achieved through the development process.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process.

Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	---	Significant Negative Impact (Development conflicts with landscape character, with significant negative impacts incapable of mitigation) - Development of this backland site would not relate well to the linear character of this part of the village. This is a very exposed site with long views, particularly over the A505 to the south.
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	---	Significant Negative Impact (Development conflicts with townscape character, with significant negative impacts incapable of mitigation) - Development of this backland site would not relate well to the linear character of this part of the village. This is a very exposed site with long views, particularly over the A505 to the south.
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Archaeological potential will require further information but the assumption for a neutral impact is that it is likely appropriate mitigation can be achieved through the development process.
	Create places, spaces and buildings that work well, wear well and look good	Will it lead to developments built to a high standard of design and good place making that reflects local character?		
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	0	Standard requirements for renewables would apply.
		Will it promote energy efficiency?		
		Will it minimise contributions to climate change through sustainable construction practices?		
	Reduce vulnerability to future climate change effects	Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	0	Flood Zone 1 and no drainage issues that cannot be appropriately addressed.
		Will it minimise the likely impacts of climate change on the development through appropriate design?		
		Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?		
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?		
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?		

Inclusive Communities - Housing	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	0	Neutral impact (existing features retained or appropriate mitigation). Assumption is standard requirements for open space would apply.
	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?		
		Will it provide for housing for the ageing population?		
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	No effect on pitch or plot provision.
Inclusive Communities - Redressing inequalities and involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	-	Group village
		Sub-Indicator: Distance to centre	---	Beyond 1000m from the centre of the to the nearest centre - Duxford.
		Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	0	No facilities lost, and no new facilities proposed directly as a result of the development.
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will improve relations between people from different backgrounds or social groups?		
		Will it redress inequalities?		
	Encourage and enable the active involvement of local people in community activities	Will it increase the ability of people to influence decisions, including 'hard to reach' groups?		
Will it encourage engagement with community activities?		0	No facilities lost, and no new facilities proposed directly as a result of the development.	

Economic Activity		Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	0	Development would have no effect on employment land or premises.
	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	Development would have no effect on vitality or viability of existing centres. The indicator is likely to apply particularly to sites which include retail, offices, or leisure uses.
		Will it encourage the rural economy and diversification, and support sustainable tourism?		
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it contribute to providing a range of employment opportunities, in accessible locations?	+	23.10 minutes from site to nearest employment area with 2000+ employees. 2 employment areas with 2000+ employees that can be accessed in less than 30mins - 1.6km walk.
		Will it improve the level of investment in key community services and infrastructure, including broadband?	-	Minor Utilities Infrastructure improvements required, but constraints can be addressed. There is insufficient spare mains water capacity within the distribution zone to supply the number of proposed properties which could arise if all the SHLAA sites within the zone were to be developed. The sewerage network is close capacity and will require mitigation.
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve access to education and training, and support provision of skilled employees to the economy?	+	Insufficient spare school capacity but potential for improvement to meet needs

Transport	Reduce the need to travel and promote more sustainable transport choices.	Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	+	Total score of 16.
		Sub-indicator: Distance to bus stop / rail station	+	220m ACF from the centre of the site to the nearest bus stop. 490m to train station.
		Sub-indicator: Frequency of Public Transport	0	Bus - Hourly Service Train - 30 minute service
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	+++	Bus - 51 minutes to Cambridge. Train - 11 minutes to Cambridge
		Sub-indicator: Distance for cycling to City Centre or Market Town	0	10.42km ACF from the centre of the site to Saffron Walden Market.
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	---	Insufficient capacity or access constraints that cannot be adequately mitigated. The Highway Authority would resist any access onto the A505 at this location.
		Will it make the transport network safer for and promote use of non-motorised modes?	0	No impact.

Site No. Site 286
Address Land adjoining The Green, Duxford
Location Duxford
Category of site Group Village
Site area 0.81

Theme	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	0	No previously developed land.
		Will it use land efficiently?		
		Will it protect and enhance the best and most versatile agricultural land?	-	Minor loss of best and most versatile agricultural land (Grades 1 and 2)
		Will it avoid the sterilisation of economic mineral reserves? Will it minimise the degradation/loss of soils due to new development?	0	Site not within an area designated in the Minerals and Waste LDF.
	Minimise waste production and support the reuse and recycling of waste products	Will it encourage reduction in household waste, and increase waste recovery and recycling?		
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	0	Development unlikely to impact on air quality. Site lies in an area where air quality acceptable.
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	0	Development compatible with neighbouring uses.
		Will it minimise, and where possible address, land contamination?	0	Development not on land likely to be contaminated
		Will it protect and where possible enhance the quality of the water environment?	0	Assumptions for a neutral impact are that appropriate standards and pollution control measures will be achieved through the development process, e.g. as part of Sustainable Drainage Systems (Suds).
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiversity?	0	No impact on protected sites and species (or impacts could be mitigated).
	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	0	Assumptions for a neutral impact are that existing features that warrant retention can be retained or appropriate mitigation will be achieved through the development process.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process.

Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	-	Minor Negative Impact (Development conflicts with landscape character, minor negative impacts incapable of mitigation) - this part of the village is a sensitive location with a distinctly rural character.
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	---	Significant Negative Impact (Development conflicts with townscape character, with significant negative impacts incapable of mitigation) - site important to the character of the Conservation Area, the historic core of the village and its tranquillity.
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	---	Significant Negative Impact on historic Assets (incapable of satisfactory mitigation) - site forms an important part of the setting of the Grade I Listed church, Conservation Area, and the historic core of the village. Archaeological potential will require further information but it is likely appropriate mitigation can be achieved through the development process.
	Create places, spaces and buildings that work well, wear well and look good	Will it lead to developments built to a high standard of design and good place making that reflects local character?		
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	0	Standard requirements for renewables would apply.
		Will it promote energy efficiency?		
		Will it minimise contributions to climate change through sustainable construction practices?		
	Reduce vulnerability to future climate change effects	Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	0	Flood Zone 1 and no drainage issues that cannot be appropriately addressed.
		Will it minimise the likely impacts of climate change on the development through appropriate design?		
		Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?		
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?		
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?		

Inclusive Communities - Housing	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	0	Neutral impact (existing features retained or appropriate mitigation).
	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?		
		Will it provide for housing for the ageing population?		
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	No effect on pitch or plot provision.
Inclusive Communities - Redressing inequalities and involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	-	Group Village
		Sub-Indicator: Distance to centre	+++	234m to village hall ACF from centre of the site - Duxford has long centre along main road.
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	0	No facilities lost, and no new facilities proposed directly as a result of the development.
		Will improve relations between people from different backgrounds or social groups?		
	Encourage and enable the active involvement of local people in community activities	Will it redress inequalities?		
		Will it increase the ability of people to influence decisions, including 'hard to reach' groups?		
	Will it encourage engagement with community activities?	0	No facilities lost, and no new facilities proposed directly as a result of the development.	

Economic Activity		Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	0	Development would have no effect on employment land or premises.
	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	Development would have no effect on vitality or viability of existing centres. The indicator is likely to apply particularly to sites which include retail, offices, or leisure uses.
		Will it encourage the rural economy and diversification, and support sustainable tourism?		
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it contribute to providing a range of employment opportunities, in accessible locations?	+	25.55 minutes from site to nearest employment area with 2000+ employees. 2 employment areas with 2000+ employees that can be accessed in less than 30mins - 1.6km walk.
		Will it improve the level of investment in key community services and infrastructure, including broadband?	+++ / +	Development can use existing capacity in utilities infrastructure. The sewerage network is approaching capacity and will require investigation and possibly mitigation.
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve access to education and training, and support provision of skilled employees to the economy?	-	School capacity not sufficient, but significant issues can be adequately addressed

Transport		Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	0	Total score of 12.
	Reduce the need to travel and promote more sustainable transport choices.	Sub-indicator: Distance to bus stop / rail station	+++	158m ACF from centre of the site to nearest bus stop to best service (Citi 7).
		Sub-indicator: Frequency of Public Transport	-	Hourly Service.
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	---	54 Minutes from Duxford to Cambridge.
		Sub-indicator: Distance for cycling to City Centre or Market Town	+	9.66km ACF centre of site to Saffron Walden Market.
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	0	No capacity constraints identified, safe access can be achieved.
		Will it make the transport network safer for and promote use of non-motorised modes?	+	The Highway Authority will require new development to provide or contribute to the provision of infrastructure to encourage more sustainable transport links both on and off site. Provision or contribution from this site would result in minor improvement to public transport, walking or cycling facilities.

Site No. Site 287
Address Land adj to Fen Drayton Road, Swavesey
Location Swavesey
Category of site Group Village
Site area 1.3

Theme	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	0	No previously developed land.
		Will it use land efficiently?		
		Will it protect and enhance the best and most versatile agricultural land?	0	Development would not affect best and most versatile agricultural land (Grades 1 and 2).
		Will it avoid the sterilisation of economic mineral reserves? Will it minimise the degradation/loss of soils due to new development?	0	Small part of the site within an area designated in the Minerals and Waste LDF but development would not have a negative impact.
	Minimise waste production and support the reuse and recycling of waste products	Will it encourage reduction in household waste, and increase waste recovery and recycling?		
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	0	Development unlikely to impact on air quality. Site lies in an area where air quality acceptable.
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	-	Development compatible with neighbouring uses. Some minor to moderate additional road traffic noise generation impact on existing residential due to development related car movements but dependent on location of site entrance. Some potential for traffic noise from A14, but should be possible to mitigate.
		Will it minimise, and where possible address, land contamination?	0	Development not on land likely to be contaminated
		Will it protect and where possible enhance the quality of the water environment?	0	Assumptions for a neutral impact are that appropriate standards and pollution control measures will be achieved through the development process, e.g. as part of Sustainable Drainage Systems (Suds).
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiversity?	0	No impact on protected sites and species (or impacts could be mitigated).
	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	0	Assumptions for a neutral impact are that existing features that warrant retention can be retained or appropriate mitigation will be achieved through the development process.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process. A bridleway lies approximately 615m to the west.

Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	---	Significant Negative Impact (Development conflicts with landscape character, with significant negative impacts incapable of mitigation) - The site is very open and rural in character and development on this site would be very large scale and harmful to the character of the village. It would constitute back land development, poorly related to the existing built-up part of the village.
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	---	Significant Negative Impact (Development conflicts with landscape character, with significant negative impacts incapable of mitigation) - The site is very open and rural in character and development on this site would be very large scale and harmful to the character of the village. It would constitute back land development, poorly related to the existing built-up part of the village.
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	-	Minor Negative Impact on historic Assets (incapable of satisfactory mitigation) – site forms part of the wider setting of a Grade II Listed windmill to the west. Archaeological potential will require further information but the assumption for a neutral impact is that it is likely appropriate mitigation can be achieved through the development process.
	Create places, spaces and buildings that work well, wear well and look good	Will it lead to developments built to a high standard of design and good place making that reflects local character?		
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	0	Standard requirements for renewables would apply.
		Will it promote energy efficiency?		
		Will it minimise contributions to climate change through sustainable construction practices?		
	Reduce vulnerability to future climate change effects	Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	0	Flood Zone 1 and no drainage issues that cannot be appropriately addressed.
		Will it minimise the likely impacts of climate change on the development through appropriate design?		
		Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?		
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?		
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?		

Inclusive Communities - Housing	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	0	Neutral impact (existing features retained or appropriate mitigation). Assumption is standard requirements for open space would apply.
	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?		
		Will it provide for housing for the ageing population?		
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	No effect on pitch or plot provision.
Inclusive Communities - Redressing inequalities and involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	-	Group Village
		Sub-Indicator: Distance to centre	0	606m ACF to The White Horse pub which is surrounded by a cluster of other services and facilities within the village.
		Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	0	No facilities lost, and no new facilities proposed directly as a result of the development.
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will improve relations between people from different backgrounds or social groups?		
		Will it redress inequalities?		
		Will it increase the ability of people to influence decisions, including 'hard to reach' groups?		
	Encourage and enable the active involvement of local people in community activities	Will it encourage engagement with community activities?	0	No facilities lost, and no new facilities proposed directly as a result of the development.

Economic Activity		Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	0	Development would have no effect on employment land or premises.
	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	Development would have no effect on vitality or viability of existing centres. The indicator is likely to apply particularly to sites which include retail, offices, or leisure uses.
		Will it encourage the rural economy and diversification, and support sustainable tourism?		
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it contribute to providing a range of employment opportunities, in accessible locations?	+	24.06 minutes from site to nearest employment area with 2000+ employees. 2 employment areas with 2000+ employees that can be accessed in less than 30mins - 1.6km walk.
		Support appropriate investment in people, places, communications and other infrastructure	Will it improve the level of investment in key community services and infrastructure, including broadband?	-
	Will it improve access to education and training, and support provision of skilled employees to the economy?		--- / -	Insufficient spare school capacity but potential for improvement to meet needs. Insufficient primary and large deficit in secondary school capacity.

Transport	Reduce the need to travel and promote more sustainable transport choices.	Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	0	Total score of 14.
		Sub-indicator: Distance to bus stop / rail station	+	455m ACF from the centre of the site to the nearest bus stop.
		Sub-indicator: Frequency of Public Transport	-	Hourly service.
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	+	23 Minutes from Swavesey to St. Ives.
		Sub-indicator: Distance for cycling to City Centre or Market Town	+	5.20km ACF from the centre of the site to St. Ives Market.
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	0 / -	No capacity constraints identified, safe access can be achieved. The Highways Agency comment that most of the sites identified within this group are small in-fills, closely associated with existing settlements. It is realistic to assume that a substantial proportion of such sites could be accommodated in the short to medium term but it would be difficult to see more than a quarter of the identified capacity being deliverable.
		Will it make the transport network safer for and promote use of non-motorised modes?	0	No impact.

Site No. Site 288
Address Land north of 70 High Street, Harston
Location Harston
Category of site Group Village
Site area 0.99

Theme	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	0	No previously developed land.
		Will it use land efficiently?		
		Will it protect and enhance the best and most versatile agricultural land?	-	Minor loss of best and most versatile agricultural land (Grades 1 and 2) - small site but all Grade 2 (0.99 ha.).
		Will it avoid the sterilisation of economic mineral reserves? Will it minimise the degradation/loss of soils due to new development?	0	Site within an area designated in the Minerals and Waste LDF but development would not have a negative impact
	Minimise waste production and support the reuse and recycling of waste products	Will it encourage reduction in household waste, and increase waste recovery and recycling?		
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	0	Development unlikely to impact on air quality. Site lies in an area where air quality acceptable.
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	-	Development compatible with neighbouring uses. Noise from High St but can be mitigated by design and layout, which may influence density. Some minor to moderate additional road traffic noise generation impact on existing residential due to development related car movements but dependent on location of site entrance.
		Will it minimise, and where possible address, land contamination?	0	Development not on land likely to be contaminated
		Will it protect and where possible enhance the quality of the water environment?	0	Development unlikely to affect water quality. Assumptions for a neutral impact are that appropriate standards and pollution control measures will be achieved through the development process, e.g. as part of Sustainable Drainage Systems (Suds).
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiversity?	0	No impact on protected sites and species (or impacts could be mitigated). Within the grounds of Park House near to the road there is a large group of protected trees.
	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	0	Assumptions for a neutral impact are that existing features that warrant retention can be retained or appropriate mitigation will be achieved through the development process.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process.

Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	---	Significant Negative Impact (Development conflicts with landscape character, with significant negative impacts incapable of mitigation) - Development of this site would result in the loss of countryside which forms an important part of the rural character of this part of the village, designated Important Countryside Frontage. The land forms a transition landscape between the built edge of the village and wider agricultural landscape. The site forms part of the setting of Listed Building on the opposite side of the A10 and development would have a detrimental impact on their setting.
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	---	Significant Negative Impact (Development conflicts with townscape character, with significant negative impacts incapable of mitigation) - Development of this site would result in the loss of countryside which forms an important part of the rural character of this part of the village, designated Important Countryside Frontage. The land forms a transition landscape between the built edge of the village and wider agricultural landscape. The site forms part of the setting of Listed Building on the opposite side of the A10 and development would have a detrimental impact on their setting.
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	---	Significant Negative Impact on historic Assets (incapable of satisfactory mitigation) - The site forms an important part of the historic and rural setting of this part of the village where there are several Grade II Listed Buildings. Archaeological potential will require further information but it is likely appropriate mitigation can be achieved through the development process.
	Create places, spaces and buildings that work well, wear well and look good	Will it lead to developments built to a high standard of design and good place making that reflects local character?		
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	0	Standard requirements for renewables would apply.
		Will it promote energy efficiency?		
		Will it minimise contributions to climate change through sustainable construction practices?		
	Reduce vulnerability to future climate change effects	Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	0	Flood Zone 1 and no drainage issues that cannot be appropriately addressed.
		Will it minimise the likely impacts of climate change on the development through appropriate design?		
	Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?			
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?		
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?		
	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	0	Neutral impact (existing features retained or appropriate mitigation). Assumption is standard requirements for open space would apply.

Inclusive Communities - Housing	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?		
		Will it provide for housing for the ageing population?		
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	No effect on pitch or plot provision.
Inclusive Communities - Redressing Inequalities and Involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	-	Group Village
		Sub-Indicator: Distance to centre	+	441m ACF to the Pemberton Arms pub - location chosen as representation of central point of these services and facilities.
		Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	0	No facilities lost, and no new facilities proposed directly as a result of the development.
		Will improve relations between people from different backgrounds or social groups?		
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will it redress inequalities?		
		Will it increase the ability of people to influence decisions, including 'hard to reach' groups?		
	Encourage and enable the active involvement of local people in community activities	Will it encourage engagement with community activities?	0	No facilities lost, and no new facilities proposed directly as a result of the development.

Economic Activity		Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	0	Development would have no effect on employment land or premises.
	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	Development would have no effect on vitality or viability of existing centres. The indicator is likely to apply particularly to sites which include retail, offices, or leisure uses.
		Will it encourage the rural economy and diversification, and support sustainable tourism?		
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it contribute to providing a range of employment opportunities, in accessible locations?	+	22.20 minutes from site to nearest employment area with 2000+ employees. 3 employment areas with 2000+ employees can be accessed in less than 30mins - 1.6km walk.
		Will it improve the level of investment in key community services and infrastructure, including broadband?	+	Minor Utilities Infrastructure improvements required, but constraints can be addressed. There is insufficient spare mains water capacity within the distribution zone to supply the number of proposed properties which could arise if all the SHLAA sites within the zone were to be developed. The sewerage network is close to capacity and will require mitigation.
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve access to education and training, and support provision of skilled employees to the economy?	+	Insufficient spare school capacity but potential for improvement to meet needs.

Transport	Reduce the need to travel and promote more sustainable transport choices.	Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	+	Total score of 16.
		Sub-indicator: Distance to bus stop / rail station	+++	289m ACF from the centre of the site to the nearest bus stop.
		Sub-indicator: Frequency of Public Transport	-	Hourly Service.
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	+	20 Minutes from Harston to Cambridge; 21 Minutes from Harston to Royston.
		Sub-indicator: Distance for cycling to City Centre or Market Town	+	7.66km ACF from the centre of the site to Cambridge Market.
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	0	No capacity constraints identified, safe access can be achieved.
		Will it make the transport network safer for and promote use of non-motorised modes?	0	No impact.

Site No. Site 289
Address Land at and to the rear of 98 - 102 High Street, Harston
Location Harston
Category of site Group Village
Site area 1.38

Theme	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	0	The site includes one residential property.
		Will it use land efficiently?		
		Will it protect and enhance the best and most versatile agricultural land?	-	Minor loss of best and most versatile agricultural land (Grades 1 and 2) - small site but all Grade 2 (1.38 ha.).
		Will it avoid the sterilisation of economic mineral reserves? Will it minimise the degradation/loss of soils due to new development?	0	Site within an area designated in the Minerals and Waste LDF but development would not have a negative impact
	Minimise waste production and support the reuse and recycling of waste products	Will it encourage reduction in household waste, and increase waste recovery and recycling?		
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	0	Development unlikely to impact on air quality. Site lies in an area where air quality acceptable.
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	-	Development compatible with neighbouring uses. Some minor to moderate additional road traffic noise generation impact on existing residential due to development related car movements but dependent on location of site entrance.
		Will it minimise, and where possible address, land contamination?	0	Development not on land likely to be contaminated
		Will it protect and where possible enhance the quality of the water environment?	0	Development unlikely to affect water quality. Assumptions for a neutral impact are that appropriate standards and pollution control measures will be achieved through the development process, e.g. as part of Sustainable Drainage Systems (Suds).
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiversity?	0	No impact on protected sites and species (or impacts could be mitigated). There are protected trees within the grounds of the large property at 94 High Street. Part of this group of trees is adjacent to the south- western boundary of the site.
	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	0	Assumptions for a neutral impact are that existing features that warrant retention can be retained or appropriate mitigation will be achieved through the development process.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process. A footpath from the A10 around the edge of 94 High Street then follows the southern boundary of the site.

Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	---	Significant Negative Impact (Development conflicts with landscape character, with significant negative impacts incapable of mitigation) - Development would result in the loss of a transition landscape between the built edge of the village and wider agricultural landscape. The site forms part of the setting of Listed Building on the opposite side of the A10, and loss of hedgerow to the road frontage to gain access would have a detrimental impact.
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	---	Significant Negative Impact (Development conflicts with townscape character, with significant negative impacts incapable of mitigation) - Development would result in the loss of a transition landscape between the built edge of the village and wider agricultural landscape. The site forms part of the setting of Listed Building on the opposite side of the A10, and loss of hedgerow to the road frontage to gain access would have a detrimental impact.
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	---	Significant Negative Impact on historic Assets (incapable of satisfactory mitigation) - The site forms an important part of the historic and rural setting of this part of the village where there are several Grade II Listed Buildings. Archaeological potential will require further information but it is likely appropriate mitigation can be achieved through the development process.
	Create places, spaces and buildings that work well, wear well and look good	Will it lead to developments built to a high standard of design and good place making that reflects local character?		
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	0	Standard requirements for renewables would apply.
		Will it promote energy efficiency?		
		Will it minimise contributions to climate change through sustainable construction practices?		
	Reduce vulnerability to future climate change effects	Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	0	Flood Zone 1 and no drainage issues that cannot be appropriately addressed.
		Will it minimise the likely impacts of climate change on the development through appropriate design?		
Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?				
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?		
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?		

Inclusive Communities - Housing	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	0	Neutral impact (existing features retained or appropriate mitigation). Assumption is standard requirements for open space would apply.
	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?		
		Will it provide for housing for the ageing population?		
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	No effect on pitch or plot provision.
Inclusive Communities - Redressing inequalities and involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	-	Group Village
		Sub-Indicator: Distance to centre	0	627m ACF to the Pemberton Arms pub - location chosen as representation of central point of these services and facilities.
		Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	0	No facilities lost, and no new facilities proposed directly as a result of the development.
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will improve relations between people from different backgrounds or social groups?		
		Will it redress inequalities?		
		Will it increase the ability of people to influence decisions, including 'hard to reach' groups?		
Encourage and enable the active involvement of local people in community activities	Will it encourage engagement with community activities?	0	No facilities lost, and no new facilities proposed directly as a result of the development.	

Economic Activity		Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	0	Development would have no effect on employment land or premises.
	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	Development would have no effect on vitality or viability of existing centres. The indicator is likely to apply particularly to sites which include retail, offices, or leisure uses.
		Will it encourage the rural economy and diversification, and support sustainable tourism?		
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it contribute to providing a range of employment opportunities, in accessible locations?	+	19.75 minutes from site to nearest employment area with 2000+ employees. 5 employment areas with 2000+ employees can be accessed in less than 30mins - 1.6km walk.
		Will it improve the level of investment in key community services and infrastructure, including broadband?	+	Minor Utilities Infrastructure improvements required, but constraints can be addressed. There is insufficient spare mains water capacity within the distribution zone to supply the number of proposed properties which could arise if all the SHLAA sites within the zone were to be developed. The sewerage network is close to capacity and will require mitigation.
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve access to education and training, and support provision of skilled employees to the economy?	+	Insufficient spare school capacity but potential for improvement to meet needs.

Transport	Reduce the need to travel and promote more sustainable transport choices.	Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	+	Total score of 16.
		Sub-indicator: Distance to bus stop / rail station	+++	178m ACF from the centre of the site to the nearest bus stop.
		Sub-indicator: Frequency of Public Transport	-	Hourly Service.
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	+	20 Minutes from Harston to Cambridge; 21 Minutes from Harston to Royston.
		Sub-indicator: Distance for cycling to City Centre or Market Town	+	7.47km ACF from the centre of the site to Cambridge Market.
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	0	No capacity constraints identified, safe access can be achieved.
		Will it make the transport network safer for and promote use of non-motorised modes?	0	No impact.

Site No. Site 290
Address Land east of Mill Road, Over
Location Over
Category of site Group Village
Site area 2.18

Theme	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	0	No previously developed land.
		Will it use land efficiently?		
		Will it protect and enhance the best and most versatile agricultural land?	-	Minor loss of best and most versatile agricultural land (Grades 1 and 2) - small site but all Grade 2 (2.18 ha.)
		Will it avoid the sterilisation of economic mineral reserves? Will it minimise the degradation/loss of soils due to new development?	0	Site not within an area designated in the Minerals and Waste LDF.
	Minimise waste production and support the reuse and recycling of waste products	Will it encourage reduction in household waste, and increase waste recovery and recycling?		
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	0 / -	Development unlikely to impact on air quality. Site lies in an area where air quality acceptable. A sewage pumping station is adjacent to the north west corner - 1/4 of the site is within Anglian Water's cordon sanitaire and will not be suitable for residential development.
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	-	Development compatible with neighbouring uses. Some minor to moderate additional road traffic noise generation impact on existing residential due to development related car movements but dependent on location of site entrance.
		Will it minimise, and where possible address, land contamination?	0	Development not on land likely to be contaminated.
		Will it protect and where possible enhance the quality of the water environment?	0	Assumptions for a neutral impact are that appropriate standards and pollution control measures will be achieved through the development process, e.g. as part of Sustainable Drainage Systems (Suds)
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiversity?	0	No impact on protected sites and species (or impacts could be mitigated). There are several protected Elms, Ash and Horse Chestnut trees within the site.
	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	0	Assumptions for a neutral impact are that existing features that warrant retention can be retained or appropriate mitigation will be achieved through the development process.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process.

Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	---	Significant Negative Impact (Development conflicts with landscape character, with significant negative impacts incapable of mitigation) - Mill Road provides a clear edge to the village, with housing overlooking the adjoining agricultural land. An Important Countryside Frontage is designated along the road frontage. The site is very exposed and forms part of the wider countryside.
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	---	Significant Negative Impact (Development conflicts with townscape character, with significant negative impacts incapable of mitigation) - Mill Road provides a clear edge to the village, with housing overlooking the adjoining agricultural land. An Important Countryside Frontage is designated along the road frontage. The site is very exposed and forms part of the wider countryside.
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Archaeological potential will require further information but the assumption for a neutral impact is that it is likely appropriate mitigation can be achieved through the development process.
	Create places, spaces and buildings that work well, wear well and look good	Will it lead to developments built to a high standard of design and good place making that reflects local character?		
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	0	Standard requirements for renewables would apply.
		Will it promote energy efficiency?		
		Will it minimise contributions to climate change through sustainable construction practices?		
	Reduce vulnerability to future climate change effects	Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	0	Flood Zone 1 and no drainage issues that cannot be appropriately addressed.
		Will it minimise the likely impacts of climate change on the development through appropriate design?		
	Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?			
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?		
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?		

Inclusive Communities - Housing	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	0	Neutral impact (existing features retained or appropriate mitigation). Assumption is standard requirements for open space would apply.
	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?		
		Will it provide for housing for the ageing population?		
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	No effect on pitch or plot provision.
Inclusive Communities - Redressing inequalities and involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	-	Group Village
		Sub-Indicator: Distance to centre	0	677m from the centre of the site to a point along The Lanes, a central point in the village surrounded by services and facilities.
		Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	0	No facilities lost, and no new facilities proposed directly as a result of the development.
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will improve relations between people from different backgrounds or social groups?		
		Will it redress inequalities?		
	Encourage and enable the active involvement of local people in community activities	Will it increase the ability of people to influence decisions, including 'hard to reach' groups?		
Will it encourage engagement with community activities?		0	Neutral impact (existing features retained or appropriate mitigation). Assumption is standard requirements for open space would apply.	

Economic Activity		Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	0	Development would have no effect on employment land or premises.
	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	Development would have no effect on vitality or viability of existing centres. The assumption is that the local centre proposed will only be of a suitable scale to serve needs of new residents and will not impact on other centres.
		Will it encourage the rural economy and diversification, and support sustainable tourism?		
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it contribute to providing a range of employment opportunities, in accessible locations?	+	19.37 minutes from site to nearest employment area with 2000+ employees. 2 employment areas with 2000+ employees that can be accessed in less than 30mins - 1.6km walk.
		Will it improve the level of investment in key community services and infrastructure, including broadband?	+	Minor Utilities Infrastructure improvements required, but constraints can be addressed. There is insufficient spare mains water capacity within the distribution zone to supply the number of proposed properties which could arise if all the SHLAA sites within the zone were to be developed. The sewerage network is approaching capacity and will require mitigation.
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve access to education and training, and support provision of skilled employees to the economy?	-	School capacity not sufficient, but significant issues can be adequately addressed. Insufficient primary and secondary school places.

Transport	Reduce the need to travel and promote more sustainable transport choices.	Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	+	Total score of 16.
		Sub-indicator: Distance to bus stop / rail station	+++	67m ACF from the centre of the site to the nearest bus stop.
		Sub-indicator: Frequency of Public Transport	-	Hourly Service
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	+	51 minutes from Over to Cambridge; 28 minutes from Over to St. Ives
		Sub-indicator: Distance for cycling to City Centre or Market Town	+	6.74km ACF from the centre of the site to St. Ives Market.
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	0	No capacity constraints identified, safe access can be achieved. A14 capacity issues.
		Will it make the transport network safer for and promote use of non-motorised modes?	0	No impact.

Site No. Site 291
Address Land opposite 68 Spring Lane, Bassingbourn
Location Bassingbourn
Category of site Group Village
Site area 0.61

Theme	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	0	No previously developed land.
		Will it use land efficiently?		
		Will it protect and enhance the best and most versatile agricultural land?	-	Minor loss of best and most versatile agricultural land (Grades 1 and 2) - small site but all Grade 2.
		Will it avoid the sterilisation of economic mineral reserves? Will it minimise the degradation/loss of soils due to new development?	0	Site not within an area designated in the Minerals and Waste LDF.
	Minimise waste production and support the reuse and recycling of waste products	Will it encourage reduction in household waste, and increase waste recovery and recycling?		
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	0	Development unlikely to impact on air quality. Site lies in an area where air quality acceptable.
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	0	Development compatible with neighbouring uses.
		Will it minimise, and where possible address, land contamination?	0	Development not on land likely to be contaminated.
		Will it protect and where possible enhance the quality of the water environment?	0	Development unlikely to effect water quality. Assumptions for a neutral impact are that appropriate standards and pollution control measures will be achieved through the development process, e.g. as part of Sustainable Drainage Systems (SuDS).
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiversity?	0	No impact on protected sites and species (or impacts could be mitigated).
	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	0	Assumptions for a neutral impact are that existing features that warrant retention can be retained or appropriate mitigation will be achieved through the development process.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process.

Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	-	Minor negative impact (development conflicts with landscape character, minor negative impacts incapable of mitigation) - development of the site would result in the encroachment of built development into the enclosed fields that form a soft edge to the village.
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	---	Significant negative impact (development conflicts with townscape character, significant negative impacts incapable of mitigation) - development of this site would introduce development behind the linear development fronting onto Spring Lane and so would change the rural character of this area of the village.
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	0 / -	Neutral impact (existing features retained, or appropriate mitigation possible). The site forms part of the setting of a listed building. Archaeological potential will require further information but the assumption for a neutral impact is that it is likely appropriate mitigation can be achieved through the development process.
	Create places, spaces and buildings that work well, wear well and look good	Will it lead to developments built to a high standard of design and good place making that reflects local character?		
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	0	Standard requirements for renewables would apply.
		Will it promote energy efficiency?		
		Will it minimise contributions to climate change through sustainable construction practices?		
	Reduce vulnerability to future climate change effects	Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	0	Flood Zone 1 and no drainage issues that cannot be appropriately addressed.
		Will it minimise the likely impacts of climate change on the development through appropriate design?		
Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?				
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?		
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?		

Inclusive Communities - Housing	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	0	Neutral impact (existing features retained or appropriate mitigation).
	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?		
		Will it provide for housing for the ageing population?		
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	No effect on pitch or plot provision.
Inclusive Communities - Redressing inequalities and involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	-	Group Village
		Sub-Indicator: Distance to centre	+	524m ACF to the village pharmacy - location chosen as representation of central point of a cluster services and facilities.
		Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	0	No facilities lost, and no new facilities proposed directly as a result of the development.
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will improve relations between people from different backgrounds or social groups?		
		Will it redress inequalities?		
		Will it increase the ability of people to influence decisions, including 'hard to reach' groups?		
Encourage and enable the active involvement of local people in community activities	Will it encourage engagement with community activities?	0	No facilities lost, and no new facilities proposed directly as a result of the development.	

Economic Activity		Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	0	Development would have no effect on employment land or premises.
	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	Development would have no effect on vitality or viability of existing centres. The indicator is likely to apply particularly to sites which include retail, offices, or leisure uses.
		Will it encourage the rural economy and diversification, and support sustainable tourism?		
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it contribute to providing a range of employment opportunities, in accessible locations?	+	25.00 minutes from site to nearest employment area with 2000+ employees. 2 employment areas with 2000+ employees that can be accessed in less than 30mins - 1.6km walk.
		Will it improve the level of investment in key community services and infrastructure, including broadband?	+	Minor utilities infrastructure improvements required, but constraints can be addressed. There is insufficient spare capacity within the distribution zone to supply the total number of proposed properties which could arise if all the SHLAA sites with the zone were to be developed. The sewerage network is approaching capacity.
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve access to education and training, and support provision of skilled employees to the economy?	-	School capacity not sufficient, but significant issues can be adequately addressed.

Transport	Reduce the need to travel and promote more sustainable transport choices.	Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	+	Total score of 16.
		Sub-indicator: Distance to bus stop / rail station	+	454m ACF from the centre of the site to nearest bus stop.
		Sub-indicator: Frequency of Public Transport	---	Less than hourly service.
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	+++	19 minutes from Bassingbourn to Royston.
		Sub-indicator: Distance for cycling to City Centre or Market Town	+++	3.73km ACF from the centre of the site to Royston Market.
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	0	No capacity constraints identified, safe access can be achieved.
		Will it make the transport network safer for and promote use of non-motorised modes?	0	No impact.

Site No. Site 292
Address Land to the rear of 79 High Street, Meldreth
Location Meldreth
Category of site Group Village
Site area 1.08

Theme	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	0	No previously developed land.
		Will it use land efficiently?		
		Will it protect and enhance the best and most versatile agricultural land?	-	Minor loss of best and most versatile agricultural land (Grades 1 and 2) - Grade 2.
		Will it avoid the sterilisation of economic mineral reserves? Will it minimise the degradation/loss of soils due to new development?	0	Site not within an area designated in the Minerals and Waste LDF.
	Minimise waste production and support the reuse and recycling of waste products	Will it encourage reduction in household waste, and increase waste recovery and recycling?		
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	0	Development unlikely to impact on air quality. Site lies in an area where air quality acceptable.
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	0	Development compatible with neighbouring uses.
		Will it minimise, and where possible address, land contamination?	0	Development not on land likely to be contaminated
		Will it protect and where possible enhance the quality of the water environment?	0	Development unlikely to affect water quality. Assumptions for a neutral impact are that appropriate standards and pollution control measures will be achieved through the development process and will mitigate any impact on groundwater.
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiversity?	0	No impact on protected sites and species (or impacts could be mitigated).
	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	0	Assumptions for a neutral impact are that existing features that warrant retention can be retained or appropriate mitigation will be achieved through the development process.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process.

Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	-	Minor Negative Impact (Development conflicts with landscape character, minor negative impacts incapable of mitigation) - The rural character of the High Street in the historic core of the village is a key characteristic. Important building blocks are the detached properties in large gardens with mature trees and hedgerows and the enclosed fields and paddocks to the rear of the High Street properties. Development of this site would have an adverse effect on the landscape of Meldreth by building on one of these enclosed fields and paddocks. The impact of this could be partly mitigated by a low density scheme which sought to retain most of the trees and hedgerows on the site.
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	-	Minor Negative Impact (Development conflicts with townscape character, minor negative impacts incapable of mitigation) - The rural character of the High Street in the historic core of the village is a key characteristic. Important building blocks are the detached properties in large gardens with mature trees and hedgerows and the enclosed fields and paddocks to the rear of the High Street properties. Development of this site would have an adverse effect on the townscape of Meldreth by building on one of these enclosed fields and paddocks. The impact of this could be partly mitigated by a low density scheme which sought to retain most of the trees and hedgerows on the site.
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	---	Significant Negative Impact on historic Assets (incapable of satisfactory mitigation) - Major adverse effect on setting and character of Conservation Area and Listed Buildings due to loss of garden, loss of part curtilage listed historic wall for access, loss of openness and wooded backdrop.
	Create places, spaces and buildings that work well, wear well and look good	Will it lead to developments built to a high standard of design and good place making that reflects local character?		
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	0	Standard requirements for renewables would apply.
		Will it promote energy efficiency?		
		Will it minimise contributions to climate change through sustainable construction practices?		
	Reduce vulnerability to future climate change effects	Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	0	Great majority of site in Flood Zone 1 with no drainage issues that cannot be appropriately addressed. Small part of site in Flood Zone 3.
		Will it minimise the likely impacts of climate change on the development through appropriate design?		
Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?				

Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?		
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?		
Inclusive Communities - Housing	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	0	Neutral impact (existing features retained or appropriate mitigation).
	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?		
		Will it provide for housing for the ageing population?		
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	No effect on pitch or plot provision.
Inclusive Communities - Redressing inequalities and involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	-	Group Village
		Sub-Indicator: Distance to centre	+	442m from the centre of the site to the village hall which is surrounded by a cluster of other services and facilities.
		Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	0	No facilities lost, and no new facilities proposed directly as a result of the development.
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will improve relations between people from different backgrounds or social groups?		
		Will it redress inequalities?		
	Encourage and enable the active involvement of local people in community activities	Will it increase the ability of people to influence decisions, including 'hard to reach' groups?		
		Will it encourage engagement with community activities?	0	No facilities lost, and no new facilities proposed directly as a result of the development.
	Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	0	Development would have no effect on employment land or premises. Riding School on site has ceased operation.	

Economic Activity	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	Development would have no effect on vitality or viability of existing centres. The indicator is likely to apply particularly to sites which include retail, offices, or leisure uses.
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it encourage the rural economy and diversification, and support sustainable tourism?		
		Will it contribute to providing a range of employment opportunities, in accessible locations?	+++	8.70 minutes from site to nearest employment area with 2000+ employees. 2 employment areas with 2000+ employees can be accessed in less than 30mins - 1.6km walk.
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve the level of investment in key community services and infrastructure, including broadband?	-	Minor Utilities Infrastructure improvements required, but constraints can be addressed. There is insufficient spare mains water capacity within the distribution zone to supply the number of proposed properties which could arise if all the SHLAA sites within the zone were to be developed. The WWTW is operating close to capacity and the sewerage network is at capacity and both will require mitigation.
		Will it improve access to education and training, and support provision of skilled employees to the economy?	-	School capacity not sufficient, but significant issues can be adequately addressed.

Transport	Reduce the need to travel and promote more sustainable transport choices.	Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	+	Total score of 16.
		Sub-indicator: Distance to bus stop / rail station	+++	256m ACF from the centre of the site to the nearest bus stop. 791m ACF from the centre of the site to the nearest train station.
		Sub-indicator: Frequency of Public Transport	---	Bus - less than hourly service. Train - hourly service.
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	+++	Bus - 15 minutes from Meldreth to Royston. Train - 4 minutes from Meldreth to Royston.
		Sub-indicator: Distance for cycling to City Centre or Market Town	+	5.99km ACF from the centre of the site to Royston Market.
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	-	Minor negative effects incapable of mitigation. Access constraints - the access link to the public highway is unsuitable to serve the number of units that are being proposed. The Highway Authority has concerns in relationship to the provision of suitable inter vehicle visibility splay for this site.
		Will it make the transport network safer for and promote use of non-motorised modes?	0	No impact

Site No. Site 293
Address 104 High Street, Great Abington
Location Great Abington
Category of site Group Village
Site area 0.7

Theme	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	0	No previously developed land. The site includes two residential property.
		Will it use land efficiently?		
		Will it protect and enhance the best and most versatile agricultural land?	-	Minor loss of best and most versatile agricultural land (Grades 1 and 2) - small site but all Grade 2.
		Will it avoid the sterilisation of economic mineral reserves? Will it minimise the degradation/loss of soils due to new development?	0	Site not within an area designated in the Minerals and Waste LDF
	Minimise waste production and support the reuse and recycling of waste products	Will it encourage reduction in household waste, and increase waste recovery and recycling?		
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	0	Development unlikely to impact on air quality. Site lies in an area where air quality acceptable.
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	0	Development compatible with neighbouring uses.
		Will it minimise, and where possible address, land contamination?	0	Development not on land likely to be contaminated.
		Will it protect and where possible enhance the quality of the water environment?	0	Development unlikely to affect water quality. The site within Groundwater Source Protection Zone 2 which does not rule out development but may influence land use or require pollution control measures. Assumptions for a neutral impact are that appropriate standards and pollution control measures will be achieved through the development process and will mitigate any impact on groundwater,
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiversity?	0	No impact on protected sites and species (or impacts could be mitigated).
	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	0	Assumptions for a neutral impact are that existing features that warrant retention can be retained or appropriate mitigation will be achieved through the development process.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process.

Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	---	Significant Negative Impact (Development conflicts with landscape character, with significant negative impacts incapable of mitigation) - - loss of an area of land on the edge of the village that provides a transition to the open countryside beyond.
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	---	Significant Negative Impact (Development conflicts with townscape character, with significant negative impacts incapable of mitigation) - incompatible with linear street pattern. Setting of Conservation Area - adverse effect due to density and depth of development in contrast to wide spacing and wooded rural backdrops on south west approach to this area.
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	---	Significant Negative Impact on historic Assets (incapable of satisfactory mitigation) Development of the site would have an obvious impact on the setting of the listed buildings on the site if they were to be retained. Archaeological potential will require further information but it is likely appropriate mitigation can be achieved through the development process.
	Create places, spaces and buildings that work well, wear well and look good	Will it lead to developments built to a high standard of design and good place making that reflects local character?		
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	0	Standard requirements for renewables would apply.
		Will it promote energy efficiency?		
		Will it minimise contributions to climate change through sustainable construction practices?		
	Reduce vulnerability to future climate change effects	Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	0	Flood Zone 1 and no drainage issues that cannot be appropriately addressed.
		Will it minimise the likely impacts of climate change on the development through appropriate design?		
		Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?		
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?		
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?		

Inclusive Communities - Housing	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	0	Neutral impact (existing features retained or appropriate mitigation).
	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?		
		Will it provide for housing for the ageing population?		
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	No effect on pitch or plot provision.
Inclusive Communities - Redressing inequalities and involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	-	Group Village
		Sub-Indicator: Distance to centre	+	478m ACF to the village Post Office - location represents of central point in relation to other services and facilities.
		Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	0	No facilities lost, and no new facilities proposed directly as a result of the development.
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will improve relations between people from different backgrounds or social groups?		
		Will it redress inequalities?		
	Encourage and enable the active involvement of local people in community activities	Will it increase the ability of people to influence decisions, including 'hard to reach' groups?		
Will it encourage engagement with community activities?		0	No facilities lost, and no new facilities proposed directly as a result of the development.	

Economic Activity		Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	0	Development would have no effect on employment land or premises.
	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	Development would have no effect on vitality or viability of existing centres. The indicator is likely to apply particularly to sites which include retail, offices, or leisure uses.
		Will it encourage the rural economy and diversification, and support sustainable tourism?		
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it contribute to providing a range of employment opportunities, in accessible locations?	+	18.73 minutes from site to nearest employment area with 2000+ employees. 4 employment areas with 2000+ employees that can be accessed in less than 30mins - 1.6km walk.
		Will it improve the level of investment in key community services and infrastructure, including broadband?	+	Minor Utilities Infrastructure improvements required, but constraints can be addressed. There is insufficient spare mains water capacity within the distribution zone to supply the number of proposed properties which could arise if all the SHLAA sites within the zone were to be developed. The sewerage network is approaching capacity and will require mitigation.
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve access to education and training, and support provision of skilled employees to the economy?	-	School capacity not sufficient, but significant issues can be adequately addressed

Transport	Reduce the need to travel and promote more sustainable transport choices.	Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	+	Total score of 17.
		Sub-indicator: Distance to bus stop / rail station	+++	365m ACF from the centre of the site to the nearest bus stop.
		Sub-indicator: Frequency of Public Transport	0	30 Minute Service.
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	+	26 minutes to Cambridge.
		Sub-indicator: Distance for cycling to City Centre or Market Town	+	9.90km ACF from the centre of the site to Saffron Walden Market.
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	---	Insufficient capacity or access constraints that cannot be adequately mitigated. Highway Authority has stated the proposed site does not appear to have direct link to the adopted public highway unless site number 211 comes forward.
		Will it make the transport network safer for and promote use of non-motorised modes?	0	No impact

Site No. Site 303
Address Cambourne, land at Cambourne
Location Cambourne
Category of site Rural Centre
Site area 8.08

Theme	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	0	No previously developed land.
		Will it use land efficiently?		
		Will it protect and enhance the best and most versatile agricultural land?	-	Minor loss of best and most versatile agricultural land (Grades 1 and 2) - small site but all Grade 2.
		Will it avoid the sterilisation of economic mineral reserves? Will it minimise the degradation/loss of soils due to new development?	0	Site not within an area designated in the Minerals and Waste LDF.
	Minimise waste production and support the reuse and recycling of waste products	Will it encourage reduction in household waste, and increase waste recovery and recycling?		
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	0	Development unlikely to impact on air quality. Site lies in an area where air quality acceptable.
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	0	Development compatible with neighbouring uses. Need to ensure that the commercial and residential uses are compatible; this should be possible through mitigation but may require restrictive operational controls.
		Will it minimise, and where possible address, land contamination?	0	Development not on land likely to be contaminated.
		Will it protect and where possible enhance the quality of the water environment?	0	Development unlikely to affect water quality. Assumptions for a neutral impact are that appropriate standards and pollution control measures will be achieved through the development process, e.g. as part of Sustainable Drainage Systems (Suds).
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiversity?	0	No impact on protected sites and species (or impacts could be mitigated).
	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	0	Assumptions for a neutral impact are that existing features that warrant retention can be retained or appropriate mitigation will be achieved through the development process.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process.

Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	0	Neutral impact (generally compatible, or capable of being made compatible with local landscape character). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process.
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	0	Neutral impact (generally compatible, or capable of being made compatible with local townscape character). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process.
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Archaeological potential will require further information but the assumption for a neutral impact is that it is likely appropriate mitigation can be achieved through the development process.
	Create places, spaces and buildings that work well, wear well and look good	Will it lead to developments built to a high standard of design and good place making that reflects local character?		
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	0	Standard requirements for renewables would apply.
		Will it promote energy efficiency?		
		Will it minimise contributions to climate change through sustainable construction practices?		
	Reduce vulnerability to future climate change effects	Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	0	Flood Zone 1 and no drainage issues that cannot be appropriately addressed.
		Will it minimise the likely impacts of climate change on the development through appropriate design?		
Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?				
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?		
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?		

Inclusive Communities - Housing	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	0	Neutral impact (existing features retained or appropriate mitigation). Assumption is standard requirements for open space would apply.
	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?		
		Will it provide for housing for the ageing population?		
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	No effect on pitch or plot provision.
Inclusive Communities - Redressing inequalities and involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	+	Rural Centre
		Sub-Indicator: Distance to centre	0	635m ACF to Cambourne, High Street
		Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	0	No facilities lost, and no new facilities proposed directly as a result of the development.
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will improve relations between people from different backgrounds or social groups?		
		Will it redress inequalities?		
		Will it increase the ability of people to influence decisions, including 'hard to reach' groups?		
	Encourage and enable the active involvement of local people in community activities	Will it encourage engagement with community activities?	0	No facilities lost, and no new facilities proposed directly as a result of the development.

Economic Activity		Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	-	Development would have a minor negative effect on employment opportunities, as a result of the loss of existing employment land.
	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	Development would have no effect on vitality or viability of existing centres. The indicator is likely to apply particularly to sites which include retail, offices, or leisure uses.
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it encourage the rural economy and diversification, and support sustainable tourism?		
		Will it contribute to providing a range of employment opportunities, in accessible locations?	+	28.48 minutes from site to nearest employment area with 2000+ employees. 2 employment areas with 2000+ employees can be accessed in less than 30mins - 1.6km walk.
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve the level of investment in key community services and infrastructure, including broadband?	-	Major utilities infrastructure improvements required, but constraints can be addressed. The mains water and sewerage systems will need reinforcement to increase capacity.
		Will it improve access to education and training, and support provision of skilled employees to the economy?	+	Insufficient spare school capacity but potential for improvement to meet needs.

Transport	Reduce the need to travel and promote more sustainable transport choices.	Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	+	Total Score of 17
		Sub-indicator: Distance to bus stop / rail station	+++	174m to nearest bus stop ACF (Cambourne Business Park)
		Sub-indicator: Frequency of Public Transport	+	20 minute service (Citi 4)
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	+	27 Minutes (Cambourne Business Park to Cambridge, Emmanuel Street)
		Sub-indicator: Distance for cycling to City Centre or Market Town	0	11.36km ACF to St. Ives
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	-	Minor negative effects incapable of mitigation. Capacity constraints - the A428 corridor is seriously limited in capacity between the A1 and A1198. At present there is no realistic prospect of resolving this.
		Will it make the transport network safer for and promote use of non-motorised modes?	0	No impact.

Site No. Site 305
Address Great Shelford, Land east of The Hectare, Walden Way & Hobson Acre
Location Great Shelford
Category of site Rural Centre
Site area 2.81

Theme	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	0	No previously developed land.
		Will it use land efficiently?		
		Will it protect and enhance the best and most versatile agricultural land?	-	Minor loss of best and most versatile agricultural land (Grades 1 and 2) - small site but all Grade 2.
		Will it avoid the sterilisation of economic mineral reserves? Will it minimise the degradation/loss of soils due to new development?	0	Site not within an area designated in the Minerals and Waste LDF.
	Minimise waste production and support the reuse and recycling of waste products	Will it encourage reduction in household waste, and increase waste recovery and recycling?		
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	0	Development unlikely to impact on air quality. Site lies in an area where air quality acceptable.
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	0	Development compatible with neighbouring uses. It is likely that railway noise and vibration transport sources can be abated to an acceptable level with careful noise mitigation.
		Will it minimise, and where possible address, land contamination?	0	Development not on land likely to be contaminated.
		Will it protect and where possible enhance the quality of the water environment?	0	Development unlikely to affect water quality. Assumptions for a neutral impact are that appropriate standards and pollution control measures will be achieved through the development process, e.g. as part of Sustainable Drainage Systems (Suds).
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiversity?	0	No impact on protected sites and species (or impacts could be mitigated).
	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	0	Assumptions for a neutral impact are that existing features that warrant retention can be retained or appropriate mitigation will be achieved through the development process.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process.

Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	---	Significant negative impact (development conflicts with landscape character, with significant negative impacts incapable of mitigation) - development of the site would result in further encroachment of development into the transitional area of enclosed fields that provide a softer edge to the village.
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	---	Significant negative impact (development conflicts with townscape character, with significant negative impacts incapable of mitigation) - development of the site would create development contrary to the ribbon development character of this area of village.
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Archaeological potential will require further information but the assumption for a neutral impact is that it is likely appropriate mitigation can be achieved through the development process.
	Create places, spaces and buildings that work well, wear well and look good	Will it lead to developments built to a high standard of design and good place making that reflects local character?		
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	0	Standard requirements for renewables would apply.
		Will it promote energy efficiency?		
		Will it minimise contributions to climate change through sustainable construction practices?		
	Reduce vulnerability to future climate change effects	Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	-	The majority of the site is Flood Zone 1. A small area is in Flood Zones 2 and 3.
		Will it minimise the likely impacts of climate change on the development through appropriate design?		
		Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?		
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?		
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?		

Inclusive Communities - Housing	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	0	Neutral impact (existing features retained or appropriate mitigation).
	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?		
		Will it provide for housing for the ageing population?		
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	No effect on pitch or plot provision.
Inclusive Communities - Redressing inequalities and involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	+	Rural Centre.
		Sub-Indicator: Distance to centre	---	Beyond 1000m from nearest centre ACF (1,128m to Great Shelford, Woollards Lane)
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	0	No facilities lost, and no new facilities proposed directly as a result of the development.
		Will improve relations between people from different backgrounds or social groups?		
	Encourage and enable the active involvement of local people in community activities	Will it redress inequalities?		
		Will it increase the ability of people to influence decisions, including 'hard to reach' groups?		
	Will it encourage engagement with community activities?	0	No facilities lost, and no new facilities proposed directly as a result of the development.	

Economic Activity		Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	0	Development would have no effect on employment land or premises.
	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	Development would have no effect on vitality or viability of existing centres. The indicator is likely to apply particularly to sites which include retail, offices, or leisure uses.
		Will it encourage the rural economy and diversification, and support sustainable tourism?		
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it contribute to providing a range of employment opportunities, in accessible locations?	+	20.24 minutes from site to nearest employment area with 2000+ employees. 5 employment areas with 2000+ employees can be accessed in less than 30mins - 1.6km walk.
		Will it improve the level of investment in key community services and infrastructure, including broadband?	+	Minor utilities infrastructure improvements required, but constraints can be addressed. There is insufficient spare mains water capacity within the distribution zone to supply the number of proposed properties which could arise if all the SHLAA sites within the zone were to be developed. The sewerage network is approaching capacity.
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve access to education and training, and support provision of skilled employees to the economy?	-	School capacity not sufficient, but significant issues can be adequately addressed.

Transport	Reduce the need to travel and promote more sustainable transport choices.	Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	+	Total Score of 17
		Sub-indicator: Distance to bus stop / rail station	+++	240m to nearest bus stop ACF (Great Shelford, Bridge Close)
		Sub-indicator: Frequency of Public Transport	+	20 minute service (Citi 7)
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	0	32 Minutes (Great Shelford, Bridge Close to Cambridge, Emmanuel Street)
		Sub-indicator: Distance for cycling to City Centre or Market Town	+	5.49km ACF to Cambridge City Centre
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	0	No capacity constraints identified, safe access can be achieved. The site has access to More's Meadow and The Hectare.
		Will it make the transport network safer for and promote use of non-motorised modes?	0	No impact.

Site No. Site 306
Address Histon, Land west of 113 Cottenham Road
Location Histon
Category of site Rural Centre
Site area 2.16

Theme	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	0	No previously developed land.
		Will it use land efficiently?		
		Will it protect and enhance the best and most versatile agricultural land?	-	Minor loss of best and most versatile agricultural land (Grades 1 and 2) - small site but all Grade 2.
		Will it avoid the sterilisation of economic mineral reserves? Will it minimise the degradation/loss of soils due to new development?	0	Site within an area designated in the Minerals and Waste LDF but development would not have a negative impact.
	Minimise waste production and support the reuse and recycling of waste products	Will it encourage reduction in household waste, and increase waste recovery and recycling?		
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	0	Development unlikely to impact on air quality. Site lies in an area where air quality acceptable.
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	-	Will create minor negative impacts to, or as a result of, the development, with minor negative impacts incapable of mitigation - further investigation and possible mitigation of noise and odour from Unwins Industrial Estate required.
		Will it minimise, and where possible address, land contamination?	0	Development not on land likely to be contaminated
		Will it protect and where possible enhance the quality of the water environment?	0	Development unlikely to affect water quality. Assumptions for a neutral impact are that appropriate standards and pollution control measures will be achieved through the development process, e.g. as part of Sustainable Drainage Systems (Suds).
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiversity?	0	No impact on protected sites and species (or impacts could be mitigated).
	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	0	Assumptions for a neutral impact are that existing features that warrant retention can be retained or appropriate mitigation will be achieved through the development process.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process.

Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	-	Minor Negative Impact (Development conflicts with landscape character, minor negative impacts incapable of mitigation) - Whilst the site is screened from adjoining residential properties, and the Unwins industrial estate, it is open to views across to the north west, where the landscape becomes more exposed. The landscape is clearly rural in character, and development in this location would be harmful to the character of the area.
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	-	Minor Negative Impact (Development conflicts with townscape character, minor negative impacts incapable of mitigation) - Whilst the site is screened from adjoining residential properties, and the Unwins industrial estate, it is open to views across to the north west, where the landscape becomes more exposed. The landscape is clearly rural in character, and development in this location would be harmful to the character of the area.
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	0	Neutral impact (generally compatible, or capable of being made compatible with local townscape character). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process.
	Create places, spaces and buildings that work well, wear well and look good	Will it lead to developments built to a high standard of design and good place making that reflects local character?		
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	0	Standard requirements for renewables would apply.
		Will it promote energy efficiency?		
		Will it minimise contributions to climate change through sustainable construction practices?		
	Reduce vulnerability to future climate change effects	Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	0	Flood Zone 1 and no drainage issues that cannot be appropriately addressed.
		Will it minimise the likely impacts of climate change on the development through appropriate design?		
		Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?		
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?		
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?		

Inclusive Communities - Housing	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	0	Neutral impact (existing features retained or appropriate mitigation). Assumption is standard requirements for open space would apply.
	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?		
		Will it provide for housing for the ageing population?		
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	No effect on pitch or plot provision.
Inclusive Communities - Redressing inequalities and involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	+	Rural Centre
		Sub-Indicator: Distance to centre	---	Beyond 1000m from nearest centre ACF (1,038m to Histon, High Street)
		Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	0	No facilities lost, and no new facilities proposed directly as a result of the development.
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will improve relations between people from different backgrounds or social groups?		
		Will it redress inequalities?		
		Will it increase the ability of people to influence decisions, including 'hard to reach' groups?		
	Encourage and enable the active involvement of local people in community activities	Will it encourage engagement with community activities?	0	No facilities lost, and no new facilities proposed directly as a result of the development.

Economic Activity		Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	0	Development would have no effect on employment land or premises.
	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	Development would have no effect on vitality or viability of existing centres. The indicator is likely to apply particularly to sites which include retail, offices, or leisure uses.
		Will it encourage the rural economy and diversification, and support sustainable tourism?		
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it contribute to providing a range of employment opportunities, in accessible locations?	+++	12.17 minutes from site to nearest employment area with 2000+ employees. 5 employment areas with 2000+ employees can be accessed in less than 30mins - 1.6km walk.
		Will it improve the level of investment in key community services and infrastructure, including broadband?	+	Minor Utilities Infrastructure improvements required, but constraints can be addressed. There is insufficient spare mains water capacity within the distribution zone to supply the number of proposed properties which could arise if all the SHLAA sites within the zone were to be developed. The sewerage network is approaching capacity and will require investigation and possibly mitigation.
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve access to education and training, and support provision of skilled employees to the economy?	+	Insufficient spare school capacity but potential for improvement to meet needs. Insufficient secondary school capacity.

Transport	Reduce the need to travel and promote more sustainable transport choices.	Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	+	Total Score of 18
		Sub-indicator: Distance to bus stop / rail station	+++	163m to nearest bus stop ACF (Histon, Glebe Way)
		Sub-indicator: Frequency of Public Transport	+	20 minute service (Citi 8)
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	+	26 Minutes (Histon, Glebe Way to Cambridge, Emmanuel Street)
		Sub-indicator: Distance for cycling to City Centre or Market Town	+	6.27km ACF to Cambridge City Centre
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	---/-	Insufficient capacity or access constraints that cannot be adequately mitigated. Access constraints - the track that at present serves as an access unlikely to be suitable as an access for such a large area of land.
		Will it make the transport network safer for and promote use of non-motorised modes?	+	The Highway Authority will require new development to provide or contribute to the provision of infrastructure to encourage more sustainable transport links both on and off site. Provision or contribution from this site would result in minor improvement to public transport, walking or cycling facilities.

Site No. Site 308
Address Histon, Land at Former Bishops Hardware Store
Location Histon
Category of site Rural Centre
Site area 0.22

Theme	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	+++	The whole of the site is previously developed land comprising a variety of industrial and commercial buildings and hardstanding.
		Will it use land efficiently?		
		Will it protect and enhance the best and most versatile agricultural land?	0	Development would not affect best and most versatile agricultural land (Grades 1 and 2).
		Will it avoid the sterilisation of economic mineral reserves? Will it minimise the degradation/loss of soils due to new development?	0	Site not within an area designated in the Minerals and Waste LDF.
	Minimise waste production and support the reuse and recycling of waste products	Will it encourage reduction in household waste, and increase waste recovery and recycling?		
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	0	Development unlikely to impact on air quality. Site lies in an area where air quality acceptable.
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	-	Development compatible with neighbouring uses. Traffic noise will need assessment in accordance industry best practice and associated guidance and the impact. Residential use is likely to be acceptable with careful noise mitigation. Noise likely to influence the design / layout and number / density of residential premises. No objection in principle as an adequate level of protection against noise can be secured by condition.
		Will it minimise, and where possible address, land contamination?	+	The site was formerly used for industrial purposes and is adjacent to a former railway and may have contaminated land. Potential for minor benefits through remediation of minor contamination.
		Will it protect and where possible enhance the quality of the water environment?	0	Development unlikely to affect water quality. Assumptions for a neutral impact are that appropriate standards and pollution control measures will be achieved through the development process, e.g. as part of Sustainable Drainage Systems (Suds).
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiversity?	0	No impact on protected sites and species (or impacts could be mitigated).
	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	0	Assumptions for a neutral impact are that existing features that warrant retention can be retained or appropriate mitigation will be achieved through the development process.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process.

Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	0	Neutral impact (generally compatible, or capable of being made compatible with local landscape character). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process.
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	+++	Significant Positive Impact (Development would relate to local townscape character and offer significant opportunities for enhancement) - Redevelopment of this site could have a positive impact on the townscape setting of Histon, removing the retail buildings in disrepair and areas of car parking and present an opportunity to improve the site and its setting with the additional of soft landscaping.
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Archaeological potential will require further information but the assumption for a neutral impact is that it is likely appropriate mitigation can be achieved through the development process.
	Create places, spaces and buildings that work well, wear well and look good	Will it lead to developments built to a high standard of design and good place making that reflects local character?		
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	0	Standard requirements for renewables would apply.
		Will it promote energy efficiency?		
	Reduce vulnerability to future climate change effects	Will it minimise contributions to climate change through sustainable construction practices?		
		Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	0	Flood Zone 1 and no drainage issues that cannot be appropriately addressed.
		Will it minimise the likely impacts of climate change on the development through appropriate design?		
		Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?		
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?		
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?		

Inclusive Communities - Housing	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	0	Neutral impact (existing features retained or appropriate mitigation). Assumption is standard requirements for open space would apply.
	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?		
		Will it provide for housing for the ageing population?		
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	No effect on pitch or plot provision.
Inclusive Communities - Redressing inequalities and involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	+++	Rural Centre
		Sub-Indicator: Distance to centre	---	Beyond 1000m from nearest centre ACF (1,155m to Histon, High Street)
		Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	0 / -	Development would result loss of existing facilities, minor negative impact - loss of a hardware store, but marketing has shown no retail demand and there is another shop available opposite the site.
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will improve relations between people from different backgrounds or social groups?		
		Will it redress inequalities?		
		Will it increase the ability of people to influence decisions, including 'hard to reach' groups?		
Encourage and enable the active involvement of local people in community activities	Will it encourage engagement with community activities?	0	No facilities lost, and no new facilities proposed directly as a result of the development.	

Economic Activity		Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	0 / -	Development would have a minor negative effect on employment opportunities, as a result of the loss of existing employment land - loss of a hardware store, but marketing has shown no retail demand.
	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0 / -	Development would have no effect on vitality or viability of existing centres. The indicator is likely to apply particularly to sites which include retail, offices, or leisure uses - loss of a hardware store, but marketing has shown no retail demand.
		Will it encourage the rural economy and diversification, and support sustainable tourism?		
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it contribute to providing a range of employment opportunities, in accessible locations?	+++	4.66 minutes from site to nearest employment area with 2000+ employees. 13 employment areas with 2000+ employees can be accessed in less than 30mins - 1.6km walk.
		Will it improve the level of investment in key community services and infrastructure, including broadband?	+	Minor Utilities Infrastructure improvements required, but constraints can be addressed. There is insufficient spare mains water capacity within the distribution zone to supply the number of proposed properties which could arise if all the SHLAA sites within the zone were to be developed. The sewerage network is approaching capacity and will require investigation and possibly mitigation.
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve access to education and training, and support provision of skilled employees to the economy?	+	Insufficient spare school capacity but potential for improvement to meet needs. Insufficient secondary school capacity.

Transport	Reduce the need to travel and promote more sustainable transport choices.	Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	+++	Total Score of 24
		Sub-indicator: Distance to bus stop / rail station	+++	10-70m to nearest bus stop ACF (Histon & Impington, Guided Bus Stop)
		Sub-indicator: Frequency of Public Transport	+++	10 minute service (Guided Bus A & B)
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	+++	16 Minutes (Histon & Impington, Guided Bus Stop to Cambridge, The Busway Regent Street)
		Sub-indicator: Distance for cycling to City Centre or Market Town	+++	4.13km ACF to Cambridge City Centre
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	0	No capacity constraints identified, safe access can be achieved. A junction located on to Cambridge Road would be acceptable to the Highway Authority, the proposed site is acceptable in principle subject to detailed design.
		Will it make the transport network safer for and promote use of non-motorised modes?	+++	The Highway Authority will require new development to provide or contribute to the provision of infrastructure to encourage more sustainable transport links both on and off site. Provision or contribution from this site would result in minor improvement to public transport, walking or cycling facilities.

Site No. Site 310
Address Sawston, Dales Manor Business Park
Location Sawston
Category of site Rural Centre
Site area 2.06

Theme	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	+++	The whole of the site is previously developed land comprising commercial buildings and open storage areas.
		Will it use land efficiently?		
		Will it protect and enhance the best and most versatile agricultural land?	0	Development would not affect best and most versatile agricultural land (Grades 1 and 2).
		Will it avoid the sterilisation of economic mineral reserves? Will it minimise the degradation/loss of soils due to new development?	0	Site not within an area designated in the Minerals and Waste LDF.
	Minimise waste production and support the reuse and recycling of waste products	Will it encourage reduction in household waste, and increase waste recovery and recycling?		
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	0	Development unlikely to impact on air quality. Site lies in an area where air quality acceptable.
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	?	This site has a history of noisy activities related to industrial / commercial uses. Residential development would have a positive impact and would result in significant improvements in the local noise climate and the living environment of existing residential premises, development would remove existing use that creates nuisance, resulting in significant benefits. Inclusion in a comprehensive redevelopment could significantly reduce noise, vibration and dust generation on site to benefit of nearby landuses. Development by itself however would have negative impacts which could not be effectively mitigated.
		Will it minimise, and where possible address, land contamination?	+	The site was formerly in commercial / industrial use and may have contaminated land. Potential for minor benefits through remediation of minor contamination.
		Will it protect and where possible enhance the quality of the water environment?	0	Development unlikely to affect water quality. The majority of the site within Groundwater Source Protection Zone 3 which does not rule out development but may influence land use or require pollution control measures. Assumptions for a neutral impact are that appropriate standards and pollution control measures will be achieved through the development process and will mitigate any impact on groundwater,
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiversity?	0	No impact on protected sites and species (or impacts could be mitigated).
	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	0	Assumptions for a neutral impact are that existing features that warrant retention can be retained or appropriate mitigation will be achieved through the development process.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process.

Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	+	Minor Positive Impact (Development would relate to local landscape character and offer opportunities for landscape enhancement). The site is occupied by a variety of commercial buildings and open storage areas. Redevelopment for residential could improve the harsh village edge in this location.
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	0 / +	Minor Positive Impact (Development would relate to local townscape character and offer opportunities for enhancement). The site is occupied by a variety of commercial buildings and open storage areas. Redevelopment for residential could improve the harsh village edge in this location.
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Archaeological potential will require further information but the assumption for a neutral impact is that it is likely appropriate mitigation can be achieved through the development process.
	Create places, spaces and buildings that work well, wear well and look good	Will it lead to developments built to a high standard of design and good place making that reflects local character?		
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	0	Standard requirements for renewables would apply.
		Will it promote energy efficiency?		
		Will it minimise contributions to climate change through sustainable construction practices?		
	Reduce vulnerability to future climate change effects	Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	0	Flood Zone 1 and no drainage issues that cannot be appropriately addressed.
		Will it minimise the likely impacts of climate change on the development through appropriate design?		
		Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?		
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?		
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?		

Inclusive Communities - Housing	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	0	Neutral impact (existing features retained or appropriate mitigation).
	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?		
		Will it provide for housing for the ageing population?		
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	No effect on pitch or plot provision.
Inclusive Communities - Redressing inequalities and involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	+	Rural Centre.
		Sub-Indicator: Distance to centre	---	Beyond 1000m from nearest centre ACF (1,162m to Sawston, High Street)
		Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	0	No facilities lost, and no new facilities proposed directly as a result of the development.
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will improve relations between people from different backgrounds or social groups?		
		Will it redress inequalities?		
		Will it increase the ability of people to influence decisions, including 'hard to reach' groups?		
	Encourage and enable the active involvement of local people in community activities	Will it encourage engagement with community activities?	0	No facilities lost, and no new facilities proposed directly as a result of the development.

Economic Activity		Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	-	Development would have a minor negative effect on employment opportunities, as a result of the loss of existing employment land. Much of site is occupied by low intensity uses.
	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	Development would have no effect on vitality or viability of existing centres. The indicator is likely to apply particularly to sites which include retail, offices, or leisure uses.
		Will it encourage the rural economy and diversification, and support sustainable tourism?		
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it contribute to providing a range of employment opportunities, in accessible locations?	+	26.67 minutes from site to nearest employment area with 2000+ employees. Only 1 employment area with 2000+ employees that can be accessed in less than 30mins - 1.6km walk.
		Will it improve the level of investment in key community services and infrastructure, including broadband?	-	Minor Utilities Infrastructure improvements required, but constraints can be addressed. There is insufficient spare mains water capacity within the distribution zone to supply the number of proposed properties which could arise if all the SHLAA sites within the zone were to be developed. The sewerage network is approaching capacity and will require investigation and possibly mitigation.
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve access to education and training, and support provision of skilled employees to the economy?	-	School capacity not sufficient, but significant issues can be adequately addressed. Insufficient primary and secondary school capacity.

Transport		Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	0	Total Score of 13
	Reduce the need to travel and promote more sustainable transport choices.	Sub-indicator: Distance to bus stop / rail station	0	695m to nearest bus stop ACF (Sawston, Churchfield Avenue)
		Sub-indicator: Frequency of Public Transport	+	20 minute service (Citi 7)
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	-	41 Minutes (Sawston, Churchfield Avenue to Cambridge, Emmanuel Street)
		Sub-indicator: Distance for cycling to City Centre or Market Town	+	9.17km ACF to Cambridge City Centre
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	0	No capacity constraints identified, safe access can be achieved.
		Will it make the transport network safer for and promote use of non-motorised modes?	-	Would result in minor negative impact to public transport, walking or cycling facilities if developed as a free-standing site as access would be through the Business Park along Grove Road.

Site No. Site 311
Address Sawston, land north of White Field Way
Location Sawston
Category of site Rural Centre
Site area 6.6

Theme	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	0	No previously developed land.
		Will it use land efficiently?		
		Will it protect and enhance the best and most versatile agricultural land?	-	Minor loss of best and most versatile agricultural land (Grades 1 and 2) - small site but all Grade 2.
		Will it avoid the sterilisation of economic mineral reserves? Will it minimise the degradation/loss of soils due to new development?	0	Site not within a designated area identified in the Minerals and Waste LDF, development would not have negative impact.
	Minimise waste production and support the reuse and recycling of waste products	Will it encourage reduction in household waste, and increase waste recovery and recycling?		
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	0	Development unlikely to impact on air quality. Site lies in an area where air quality acceptable.
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	0	Development compatible with neighbouring uses.
		Will it minimise, and where possible address, land contamination?	0	Development not on land likely to be contaminated
		Will it protect and where possible enhance the quality of the water environment?	0	Development unlikely to affect water quality. The site within Groundwater Source Protection Zones 2 and 3 which does not rule out development but may influence land use or require pollution control measures. Assumptions for a neutral impact are that appropriate standards and pollution control measures will be achieved through the development process and will mitigate any impact on groundwater.
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiversity?	0	No impact on protected sites and species (or impacts could be mitigated).
	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	0	Assumptions for a neutral impact are that existing features that warrant retention can be retained or appropriate mitigation will be achieved through the development process.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process.

Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	0	Neutral impact (generally compatible, or capable of being made compatible with local landscape character). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process. Score assumes built development is confined to the east of the north-south tree belt.
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	0	Neutral impact (generally compatible, or capable of being made compatible with local townscape character). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process.
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	0	Neutral impact (generally compatible, or capable of being made compatible with local townscape character). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process.
	Create places, spaces and buildings that work well, wear well and look good	Will it lead to developments built to a high standard of design and good place making that reflects local character?		
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	0	Standard requirements for renewables would apply.
		Will it promote energy efficiency?		
		Will it minimise contributions to climate change through sustainable construction practices?		
	Reduce vulnerability to future climate change effects	Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	0	Flood Zone 1 and no drainage issues that cannot be appropriately addressed
		Will it minimise the likely impacts of climate change on the development through appropriate design?		
		Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?		
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?		
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?		

Inclusive Communities - Housing	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	0	Neutral impact (existing features retained or appropriate mitigation).
	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?		
		Will it provide for housing for the ageing population?		
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	No effect on pitch or plot provision.
Inclusive Communities - Redressing inequalities and involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	+	Rural Centre.
		Sub-Indicator: Distance to centre	---	Beyond 1000m from nearest centre ACF (1,003m to Sawston, High Street)
		Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	0	No facilities lost, and no new facilities proposed directly as a result of the development.
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will improve relations between people from different backgrounds or social groups?		
		Will it redress inequalities?		
		Will it increase the ability of people to influence decisions, including 'hard to reach' groups?		
	Encourage and enable the active involvement of local people in community activities	Will it encourage engagement with community activities?	0	No facilities lost, and no new facilities proposed directly as a result of the development.

Economic Activity		Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	0	Development would have no effect on employment land or premises.
	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	Development would have no effect on vitality or viability of existing centres. The indicator is likely to apply particularly to sites which include retail, offices, or leisure uses.
		Will it encourage the rural economy and diversification, and support sustainable tourism?		
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it contribute to providing a range of employment opportunities, in accessible locations?	0	30.36 minutes from site to nearest employment area with 2000+ employees. No employment areas with 2000+ employees can be accessed in less than 30mins - 1.6km walk.
		Will it improve the level of investment in key community services and infrastructure, including broadband?	-	Minor Utilities Infrastructure improvements required, but constraints can be addressed. There is insufficient spare mains water capacity within the distribution zone to supply the number of proposed properties which could arise if all the SHLAA sites within the zone were to be developed. The sewerage network is at capacity and will require mitigation. Electricity supply is likely to require local and upstream reinforcement.
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve access to education and training, and support provision of skilled employees to the economy?	-	School capacity not sufficient, but significant issues can be adequately addressed.

Transport	Reduce the need to travel and promote more sustainable transport choices.	Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	0	Total Score of 14
		Sub-indicator: Distance to bus stop / rail station	0	775m to nearest bus stop ACF (Sawston, Babraham Road)
		Sub-indicator: Frequency of Public Transport	+	20 minute service (Citi 7)
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	0	40 Minutes (Sawston, Babraham Road to Cambridge, Emmanuel Street)
		Sub-indicator: Distance for cycling to City Centre or Market Town	+	9.16km ACF to Cambridge City Centre
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	0	No capacity constraints identified, safe access can be achieved.
		Will it make the transport network safer for and promote use of non-motorised modes?	0	No impact

Site No. Site 312
Address Sawston, land at Former Marley Tiles Site, Dales Manor Business Park
Location Sawston
Category of site Rural Centre
Site area 10.7

Theme	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	+++	The whole of the site is previously developed land comprising commercial buildings and open storage areas.
		Will it use land efficiently?		
		Will it protect and enhance the best and most versatile agricultural land?	0	Development would not affect best and most versatile agricultural land (Grades 1 and 2).
		Will it avoid the sterilisation of economic mineral reserves? Will it minimise the degradation/loss of soils due to new development?	0	Site not within an area designated in the Minerals and Waste LDF.
	Minimise waste production and support the reuse and recycling of waste products	Will it encourage reduction in household waste, and increase waste recovery and recycling?		
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	0	Development unlikely to impact on air quality. Site lies in an area where air quality acceptable.
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	+++	This site has a history of noisy activities related to industrial / commercial uses. Residential development would have a positive impact and would result in significant improvements in the local noise climate and the living environment of existing residential premises, development would remove existing use that creates nuisance, resulting in significant benefits. Residential development compatible with neighbouring uses to south. Comprehensive redevelopment could significantly reduce noise, vibration and dust generation on site to benefit of nearby landuses.
		Will it minimise, and where possible address, land contamination?	+	The site was formerly in commercial / industrial use and may have contaminated land. Potential for minor benefits through remediation of minor contamination.
		Will it protect and where possible enhance the quality of the water environment?	0	Development unlikely to affect water quality. The majority of the site within Groundwater Source Protection Zone 3 which does not rule out development but may influence land use or require pollution control measures. Assumptions for a neutral impact are that appropriate standards and pollution control measures will be achieved through the development process and will mitigate any impact on groundwater.
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiversity?	0	No impact on protected sites and species (or impacts could be mitigated).
	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	0	Assumptions for a neutral impact are that existing features that warrant retention can be retained or appropriate mitigation will be achieved through the development process.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process.

Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	+	Minor Positive Impact (Development would relate to local landscape character and offer opportunities for landscape enhancement). The site is occupied by a variety of commercial buildings and open storage areas. Redevelopment for residential could improve the harsh village edge in this location.
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	0 / +	Minor Positive Impact (Development would relate to local townscape character and offer opportunities for enhancement). The site is occupied by a variety of commercial buildings and open storage areas. Redevelopment for residential could improve the harsh village edge in this location.
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Archaeological potential will require further information but the assumption for a neutral impact is that it is likely appropriate mitigation can be achieved through the development process.
	Create places, spaces and buildings that work well, wear well and look good	Will it lead to developments built to a high standard of design and good place making that reflects local character?		
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	0	Standard requirements for renewables would apply.
		Will it promote energy efficiency?		
		Will it minimise contributions to climate change through sustainable construction practices?		
	Reduce vulnerability to future climate change effects	Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	0	Flood Zone 1 and no drainage issues that cannot be appropriately addressed.
		Will it minimise the likely impacts of climate change on the development through appropriate design?		
		Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?		
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?		
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?		

Inclusive Communities - Housing	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	0	Neutral impact (existing features retained or appropriate mitigation).
	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?		
		Will it provide for housing for the ageing population?		
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	No effect on pitch or plot provision.
Inclusive Communities - Redressing inequalities and involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	+	Rural Centre.
		Sub-Indicator: Distance to centre	---	Beyond 1000m from nearest centre ACF (1,098m to Sawston, High Street)
		Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	0	No facilities lost, and no new facilities proposed directly as a result of the development.
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will improve relations between people from different backgrounds or social groups?		
		Will it redress inequalities?		
		Will it increase the ability of people to influence decisions, including 'hard to reach' groups?		
	Encourage and enable the active involvement of local people in community activities	Will it encourage engagement with community activities?	0	No facilities lost, and no new facilities proposed directly as a result of the development.

Economic Activity		Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	- / 0	Development would have a minor negative effect on employment opportunities, as a result of the loss of existing employment land. Much of site is currently vacant (since 2008), or occupied by low intensity uses. Impact mitigated by inclusion of 30,000sq ft new floorspace with higher employment potential.
	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	Development would have no effect on vitality or viability of existing centres. The indicator is likely to apply particularly to sites which include retail, offices, or leisure uses.
		Will it encourage the rural economy and diversification, and support sustainable tourism?		
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it contribute to providing a range of employment opportunities, in accessible locations?	+	25.36 minutes from site to nearest employment area with 2000+ employees. Only 1 employment area with 2000+ employees that can be accessed in less than 30mins - 1.6km walk.
		Will it improve the level of investment in key community services and infrastructure, including broadband?	-	Minor Utilities Infrastructure improvements required, but constraints can be addressed. There is insufficient spare mains water capacity within the distribution zone to supply the number of proposed properties which could arise if all the SHLAA sites within the zone were to be developed. The sewerage network is approaching capacity and will require investigation and possibly mitigation.
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve access to education and training, and support provision of skilled employees to the economy?	-	School capacity not sufficient, but significant issues can be adequately addressed. Insufficient primary and secondary school capacity.

Transport	Reduce the need to travel and promote more sustainable transport choices.	Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	0	Total Score of 13
		Sub-indicator: Distance to bus stop / rail station	0	625m to nearest bus stop ACF (Sawston, Churchfield Avenue)
		Sub-indicator: Frequency of Public Transport	+	20 minute service (Citi 7)
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	-	41 Minutes (Sawston, Churchfield Avenue to Cambridge, Emmanuel Street)
		Sub-indicator: Distance for cycling to City Centre or Market Town	+	9.17km ACF to Cambridge City Centre
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	0	No capacity constraints identified, safe access can be achieved.
		Will it make the transport network safer for and promote use of non-motorised modes?	+	The Highway Authority will require new development to provide or contribute to the provision of infrastructure to encourage more sustainable transport links both on and off site. Provision or contribution from this site would result in minor improvement to public transport, walking or cycling facilities.

Site No. Site 313
Address Land north of Babraham Road, Sawston
Location Sawston
Category of site Rural Centre
Site area 3.64

Theme	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	0	No previously developed land.
		Will it use land efficiently?		
		Will it protect and enhance the best and most versatile agricultural land?	-	Minor loss of best and most versatile agricultural land (Grades 1 and 2) - Grade 2.
		Will it avoid the sterilisation of economic mineral reserves? Will it minimise the degradation/loss of soils due to new development?	0	Site not within an area designated in the Minerals and Waste LDF.
	Minimise waste production and support the reuse and recycling of waste products	Will it encourage reduction in household waste, and increase waste recovery and recycling?		
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	0	Development unlikely to impact on air quality. Site lies in an area where air quality acceptable.
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	0	Development compatible with neighbouring uses.
		Will it minimise, and where possible address, land contamination?	+/0	The site is adjacent to an old railway line which may have contaminated land. Potential for minor benefits through remediation of minor contamination.
		Will it protect and where possible enhance the quality of the water environment?	0	Development unlikely to affect water quality. The site within Groundwater Source Protection Zone 3 which does not rule out development but may influence land use or require pollution control measures. Assumptions for a neutral impact are that appropriate standards and pollution control measures will be achieved through the development process and will mitigate any impact on groundwater.
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiversity?	0	No impact on protected sites and species (or impacts could be mitigated).
	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	+	Minor positive impact as there are some opportunities for enhancement through the provision of hedgerows.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process.

Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	0/+	Neutral impact (generally compatible, or capable of being made compatible with local landscape character). Loss of land in Green Belt would have an adverse impact on Green Belt purposes. Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process. Development of this site has the potential to have a positive impact upon the landscape setting of Sawston provided the design makes a generous provision of land to ensure a soft green edge to the east.
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	0	Neutral impact (generally compatible, or capable of being made compatible with local townscape character). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process. Adjoins industrial estate to the west.
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Archaeological potential will require further information but the assumption for a neutral impact is that it is likely appropriate mitigation can be achieved through the development process.
	Create places, spaces and buildings that work well, wear well and look good	Will it lead to developments built to a high standard of design and good place making that reflects local character?		
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	0	Standard requirements for renewables would apply.
		Will it promote energy efficiency?		
		Will it minimise contributions to climate change through sustainable construction practices?		
	Reduce vulnerability to future climate change effects	Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	0	Flood Zone 1 and no drainage issues that cannot be appropriately addressed.
		Will it minimise the likely impacts of climate change on the development through appropriate design?		
	Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?			
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?		
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?		

Inclusive Communities - Housing	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	0	Neutral impact (existing features retained or appropriate mitigation).
	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?		
		Will it provide for housing for the ageing population?		
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	No effect on pitch or plot provision.
Inclusive Communities - Redressing inequalities and involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	+	Rural Centre.
		Sub-Indicator: Distance to centre	---	Beyond 1000m from nearest centre ACF (1,175m to Sawston, High Street)
		Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	0	No facilities lost, and no new facilities proposed directly as a result of the development.
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will improve relations between people from different backgrounds or social groups?		
		Will it redress inequalities?		
		Will it increase the ability of people to influence decisions, including 'hard to reach' groups?		
Encourage and enable the active involvement of local people in community activities	Will it encourage engagement with community activities?	0	No facilities lost, and no new facilities proposed directly as a result of the development.	

Economic Activity		Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	0	Development would have no effect on employment land or premises.
	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	Development would have no effect on vitality or viability of existing centres. The indicator is likely to apply particularly to sites which include retail, offices, or leisure uses.
		Will it encourage the rural economy and diversification, and support sustainable tourism?		
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it contribute to providing a range of employment opportunities, in accessible locations?	+	27.53 minutes from site to nearest employment area with 2000+ employees. Only 1 employment area with 2000+ employees that can be accessed in less than 30mins - 1.6km walk.
		Will it improve the level of investment in key community services and infrastructure, including broadband?	-	Minor Utilities Infrastructure improvements required, but constraints can be addressed. There is insufficient spare mains water capacity within the distribution zone to supply the number of proposed properties which could arise if all the SHLAA sites within the zone were to be developed. The sewerage network is at capacity and will require mitigation. Electricity supply is likely to require local and upstream reinforcement.
Support appropriate investment in people, places, communications and other infrastructure	Will it improve access to education and training, and support provision of skilled employees to the economy?	-	School capacity not sufficient, but significant issues can be adequately addressed.	

Transport	Reduce the need to travel and promote more sustainable transport choices.	Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	0	Total Score of 12
		Sub-indicator: Distance to bus stop / rail station	-	830m to nearest bus stop ACF (Sawston, Churchfield Avenue)
		Sub-indicator: Frequency of Public Transport	+	20 minute service (Citi 7)
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	-	41 Minutes (Sawston, Churchfield Avenue to Cambridge, Emmanuel Street)
		Sub-indicator: Distance for cycling to City Centre or Market Town	+	9.56km ACF to Cambridge City Centre
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	0	No capacity constraints identified, safe access can be achieved.
		Will it make the transport network safer for and promote use of non-motorised modes?	0	No impact

Site No. Site 316
Address Cottenham, Land to Rear of High Street
Location Cottenham
Category of site Minor Rural Centre
Site area 7.02

Theme	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	0	The site includes residential properties and yards, but this is a very small proportion of the site.
		Will it use land efficiently?		
		Will it protect and enhance the best and most versatile agricultural land?	0	Development would not affect best and most versatile agricultural land (Grades 1 and 2).
		Will it avoid the sterilisation of economic mineral reserves? Will it minimise the degradation/loss of soils due to new development?	0	Site not within an area designated in the Minerals and Waste LDF.
	Minimise waste production and support the reuse and recycling of waste products	Will it encourage reduction in household waste, and increase waste recovery and recycling?		
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	0	Development unlikely to impact on air quality. Site lies in an area where air quality acceptable.
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	+	Development would remove various industrial / commercial type uses that creates nuisance, resulting in minor benefits in the local noise climate.
		Will it minimise, and where possible address, land contamination?	+	A small part of the site was formerly used as a yard and may have contaminated land. Potential for minor benefits through remediation of minor contamination.
		Will it protect and where possible enhance the quality of the water environment?	0	Assumptions for a neutral impact are that appropriate standards and pollution control measures will be achieved through the development process, e.g. as part of Sustainable Drainage Systems (Suds).
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiversity?	0	No impact on protected sites and species (or impacts could be mitigated).
	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	0	Assumptions for a neutral impact are that existing features that warrant retention can be retained or appropriate mitigation will be achieved through the development process.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process.

Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	- / ---	Minor Negative Impact (Development conflicts with landscape character, minor negative impacts incapable of mitigation) - loss of significant green backdrop.
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	---	Significant Negative Impact (Development conflicts with townscape character, with significant negative impacts incapable of mitigation) - backland development contrary to single depth development on this part of village, harming the historic linear settlement pattern, and would result in the loss of significant green backdrop.
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	---	Significant Negative Impact (Development conflicts with townscape character, with significant negative impacts incapable of mitigation) - site is within the Conservation Area, adjacent and close to several Grade II Listed Buildings along High Street, including where highway access will be provided. Loss of green backdrop will have a significant impact on their setting.
	Create places, spaces and buildings that work well, wear well and look good	Will it lead to developments built to a high standard of design and good place making that reflects local character?		
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	0	Standard requirements for renewables would apply.
		Will it promote energy efficiency?		
		Will it minimise contributions to climate change through sustainable construction practices?		
	Reduce vulnerability to future climate change effects	Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	0	Flood Zone 1 and no drainage issues that cannot be appropriately addressed.
		Will it minimise the likely impacts of climate change on the development through appropriate design?		
		Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?		
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?		
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?		

Inclusive Communities - Housing	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	+	Development would create minor opportunities for new public open space.
	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?		
		Will it provide for housing for the ageing population?		
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	No effect on pitch or plot provision.
Inclusive Communities - Redressing inequalities and involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	0	Minor Rural Centre
		Sub-Indicator: Distance to centre	-	814m from nearest centre ACF (Cottenham, High Street)
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	0	No facilities lost, and no new facilities proposed directly as a result of the development.
		Will improve relations between people from different backgrounds or social groups?		
	Encourage and enable the active involvement of local people in community activities	Will it redress inequalities?		
		Will it increase the ability of people to influence decisions, including 'hard to reach' groups?		
	Will it encourage engagement with community activities?	0	No facilities lost, and no new facilities proposed directly as a result of the development.	

Economic Activity		Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	-	Assumption that the yard is in use for business use, which would mean that development would have a minor negative effect on employment opportunities, as a result of the loss of existing employment land.
	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	Development would have no effect on vitality or viability of existing centres. The indicator is likely to apply particularly to sites which include retail, offices, or leisure uses.
		Will it encourage the rural economy and diversification, and support sustainable tourism?		
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it contribute to providing a range of employment opportunities, in accessible locations?	+	23.02 minutes from site to nearest employment area with 2000+ employees. Only 1 employment area with 2000+ employees that can be accessed in less than 30mins - 1.6km walk.
		Will it improve the level of investment in key community services and infrastructure, including broadband?	+	Minor Utilities Infrastructure improvements required, but constraints can be addressed. Electricity is likely to require reinforcement. There is insufficient spare mains water capacity within the distribution zone to supply the number of proposed properties which could arise if all the SHLAA sites within the zone were to be developed. Gas is likely to require reinforcement. The sewerage network is approaching capacity and will require investigation and possibly mitigation.
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve access to education and training, and support provision of skilled employees to the economy?	-	School capacity not sufficient, but significant issues can be adequately addressed. Insufficient primary and secondary school capacity.

Transport	Reduce the need to travel and promote more sustainable transport choices.	Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	0	Total Score of 14
		Sub-indicator: Distance to bus stop / rail station	0	258m to nearest bus stop ACF (Cottenham, Pastures) 785m to nearest bus stop ACF (Cottenham, Lambs Lane)
		Sub-indicator: Frequency of Public Transport	+	Less than hourly (106 Service) 20 minute service (Citi 8)
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	0	41-50 Minutes (Cottenham, Ivatt Street to Ely, Market Street) 36 Minutes (Cottenham, Lambs Lane to Cambridge, Emmanuel Street)
		Sub-indicator: Distance for cycling to City Centre or Market Town	+	9.81km ACF to Cambridge City Centre
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	0	No capacity constraints identified, safe access can be achieved. No capacity constraints identified, safe access can be achieved. Assumption is that a fairly large proportion of trips might reasonably be accommodated by the A14, but limitations on the county's network could result in localised diversionary trips on the A14 and M11 and this in turn may limit the capacity of these routes to accommodate new development. Conversely, these settlements are reasonably likely to be able to be served by public transport or non-motorised modes.
		Will it make the transport network safer for and promote use of non-motorised modes?	+++	The Highway Authority will require new development to provide or contribute to the provision of infrastructure to encourage more sustainable transport links both on and off site. This is a large site, so provision or contribution from this site would result in significant improvement to public transport, walking or cycling facilities.

Site No. Site 318
Address Linton, Land to the east of Linton
Location Linton
Category of site Minor Rural Centre
Site area 27.95

Theme	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	0	No previously developed land.
		Will it use land efficiently?		
		Will it protect and enhance the best and most versatile agricultural land?	0	Development would not affect best and most versatile agricultural land (Grades 1 and 2).
		Will it avoid the sterilisation of economic mineral reserves? Will it minimise the degradation/loss of soils due to new development?	0	Site within an area designated in the Minerals and Waste LDF but development would not have a negative impact. Only a very small area is within a minerals safeguarding area for sand and gravel.
	Minimise waste production and support the reuse and recycling of waste products	Will it encourage reduction in household waste, and increase waste recovery and recycling?		
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	0	Development unlikely to impact on air quality. Site lies in an area where air quality acceptable.
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	-	Development compatible with neighbouring uses. Some minor to moderate additional road traffic noise generation impact on existing residential due to development related car movements but dependent on location of site entrance. Some parts of this very large site are close to the A1307 so likely to be affected by traffic noise. The impact of existing noise on any future residential in this area is a material consideration in terms of health and well-being and providing a high quality living environment. Should be possible to mitigate.
		Will it minimise, and where possible address, land contamination?	0	Development not on land likely to be contaminated.
		Will it protect and where possible enhance the quality of the water environment?	0	Development unlikely to affect water quality. The site within Groundwater Source Protection Zone 2 which does not rule out development but may influence land use or require pollution control measures. Assumptions for a neutral impact are that appropriate standards and pollution control measures will be achieved through the development process and will mitigate any impact on groundwater, e.g. as part of Sustainable Drainage Systems (Suds).
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiversity?	0	No impact on protected sites and species (or impacts could be mitigated).
	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	0	Assumptions for a neutral impact are that existing features that warrant retention can be retained or appropriate mitigation will be achieved through the development process.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process.

Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	---	Significant Negative Impact (Development conflicts with landscape character, with significant negative impacts incapable of mitigation) . This is a very large site and the fields that make up this site are all on the edge of the village- many in locations where development would have significant impacts on the views from the historic centre and long views across the village.
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	0	Neutral impact (generally compatible, or capable of being made compatible with local townscape character). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process. Some limited development along some edge of site could result in opportunity to improve existing harsh edge to village.
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	-	Minor Negative Impact on historic Assets (incapable of satisfactory mitigation). Development of site would impact on views from historic centre and ones across the village thereby affecting setting of Conservation Area and numerous listed buildings. Archaeological potential will require further information but the assumption for a neutral impact is that it is likely appropriate mitigation can be achieved through the development process.
	Create places, spaces and buildings that work well, wear well and look good	Will it lead to developments built to a high standard of design and good place making that reflects local character?		
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	0	Standard requirements for renewables would apply.
		Will it promote energy efficiency?		
		Will it minimise contributions to climate change through sustainable construction practices?		
	Reduce vulnerability to future climate change effects	Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	0	Majority of very large site is in Flood Zone 1 with a very small part within Flood Zones 2 and 3 however no drainage issues that cannot be appropriately addressed.
		Will it minimise the likely impacts of climate change on the development through appropriate design?		
		Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?		
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?		
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?		

Inclusive Communities - Housing	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	0	Neutral impact (existing features retained or appropriate mitigation).
	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?		
		Will it provide for housing for the ageing population?		
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	No effect on pitch or plot provision.
Inclusive Communities - Redressing inequalities and involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	0	Minor Rural Centre
		Sub-Indicator: Distance to centre	-	814m from nearest centre ACF (Cottenham, High Street)
		Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	0	No facilities lost, and no new facilities proposed directly as a result of the development.
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will improve relations between people from different backgrounds or social groups?		
		Will it redress inequalities?		
		Will it increase the ability of people to influence decisions, including 'hard to reach' groups?		
Encourage and enable the active involvement of local people in community activities	Will it encourage engagement with community activities?	0	No facilities lost, and no new facilities proposed directly as a result of the development.	

Economic Activity		Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	0	Development would have no effect on employment land or premises.
	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	Development would have no effect on vitality or viability of existing centres. The indicator is likely to apply particularly to sites which include retail, offices, or leisure uses.
		Will it encourage the rural economy and diversification, and support sustainable tourism?		
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it contribute to providing a range of employment opportunities, in accessible locations?	0	33.16 minutes from site to nearest employment area with 2000+ employees. No employment area with 2000+ employees that can be accessed in less than 30mins - 1.6km walk.
		Will it improve the level of investment in key community services and infrastructure, including broadband?	-	Major utilities Infrastructure improvements required, but constraints can be addressed. There is insufficient spare mains water capacity within the distribution zone to supply the number of proposed properties which could arise if all the SHLAA sites within the zone were to be developed. The demand for electricity from the development is likely to trigger local 11,000 volt reinforcement. As the proposed site is for more than 150 dwellings this may require greater system reinforcement to gas supply. The sewage network is approaching capacity.
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve access to education and training, and support provision of skilled employees to the economy?	-	School capacity not sufficient, but significant issues be adequately addressed

Transport	Reduce the need to travel and promote more sustainable transport choices.	Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	0	Total Score of 14
		Sub-indicator: Distance to bus stop / rail station	0	258m to nearest bus stop ACF (Cottenham, Pastures) 785m to nearest bus stop ACF (Cottenham, Lambs Lane)
		Sub-indicator: Frequency of Public Transport	+	Less than hourly (106 Service) 20 minute service (Citi 8)
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	0	41-50 Minutes (Cottenham, Ivatt Street to Ely, Market Street) 36 Minutes (Cottenham, Lambs Lane to Cambridge, Emmanuel Street)
		Sub-indicator: Distance for cycling to City Centre or Market Town	+	9.81km ACF to Cambridge City Centre
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	---	Insufficient capacity or access constraints that cannot be adequately mitigated. Highway Authority has severe concerns with regards to the accident record of the A1307 and therefore before the proposed scheme comes forward a detailed analysis of access points onto the A1307 will need to be completed.
		Will it make the transport network safer for and promote use of non-motorised modes?	0	No impact.

Site No. Site 320
Address Melbourne, land to the east of New Road
Location Melbourne
Category of site Minor Rural Centre
Site area 9.13

Theme	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	0	No previously developed land.
		Will it use land efficiently?		
		Will it protect and enhance the best and most versatile agricultural land?	-	Minor loss of best and most versatile agricultural land (Grades 1 and 2)
		Will it avoid the sterilisation of economic mineral reserves? Will it minimise the degradation/loss of soils due to new development?	0	Site not within an area designated in the Minerals and Waste LDF.
	Minimise waste production and support the reuse and recycling of waste products	Will it encourage reduction in household waste, and increase waste recovery and recycling?		
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	0	Development unlikely to impact on air quality. Site lies in an area where air quality acceptable.
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	0	Development compatible with neighbouring uses.
		Will it minimise, and where possible address, land contamination?	+	Potential contamination from agricultural use, potential for minor benefits through remediation of minor contamination
		Will it protect and where possible enhance the quality of the water environment?	0	Assumptions for a neutral impact are that appropriate standards and pollution control measures will be achieved through the development process, e.g. as part of Sustainable Drainage Systems (Suds).
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiversity?	0	No impact on protected sites and species (or impacts could be mitigated).
	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	0	Assumptions for a neutral impact are that existing features that warrant retention can be retained or appropriate mitigation will be achieved through the development process.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process.

Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	0/-	Minor Negative Impact (Development conflicts with landscape character, minor negative impacts incapable of mitigation) to neutral impact (generally compatible, or capable of being made compatible with local landscape character). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process. Development would have an adverse effect on the landscape setting of Melbourn through the development of part of an arable field on rising land. The impact of this could be mitigated by restricting development to the northern part of the site and by the creation of a new soft green edge on the southern boundary.
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	0	Neutral impact (generally compatible, or capable of being made compatible with local townscape character). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process.
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Archaeological potential will require further information but the assumption for a neutral impact is that it is likely appropriate mitigation can be achieved through the development process.
	Create places, spaces and buildings that work well, wear well and look good	Will it lead to developments built to a high standard of design and good place making that reflects local character?		
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	0	Standard requirements for renewables would apply.
		Will it promote energy efficiency?		
	Reduce vulnerability to future climate change effects	Will it minimise contributions to climate change through sustainable construction practices?		
		Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	0	Flood Zone 1 and no drainage issues that cannot be appropriately addressed.
		Will it minimise the likely impacts of climate change on the development through appropriate design?		
	Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?			
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?		
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?		

Inclusive Communities - Housing	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	+	Development would create minor opportunities for new public open space
	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?		
		Will it provide for housing for the ageing population?		
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	No effect on pitch or plot provision.
Inclusive Communities - Redressing inequalities and involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	0	Minor Rural Centre
		Sub-Indicator: Distance to centre	0	703m of nearest centre ACF (Melbourn, High Street)
		Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	0	No facilities lost, and no new facilities proposed directly as a result of the development.
		Will improve relations between people from different backgrounds or social groups?		
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will it redress inequalities?		
		Will it increase the ability of people to influence decisions, including 'hard to reach' groups?		
Encourage and enable the active involvement of local people in community activities	Will it encourage engagement with community activities?	0	No facilities lost, and no new facilities proposed directly as a result of the development.	

Economic Activity		Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	0	Development would have no effect on employment land or premises.
	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	Development would have no effect on vitality or viability of existing centres. The indicator is likely to apply particularly to sites which include retail, offices, or leisure uses.
		Will it encourage the rural economy and diversification, and support sustainable tourism?		
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it contribute to providing a range of employment opportunities, in accessible locations?	+++	13.13 minutes from site to nearest employment area with 2000+ employees. Only 1 employment area with 2000+ employees that can be accessed in less than 30mins - 1.6km walk.
		Will it improve the level of investment in key community services and infrastructure, including broadband?	+++/+	Development can use existing capacity in utilities infrastructure. The sewerage network is approaching capacity and will require investigation and possibly mitigation.
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve access to education and training, and support provision of skilled employees to the economy?	+++	Sufficient surplus capacity available in all catchment schools.

Transport	Reduce the need to travel and promote more sustainable transport choices.	Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	+	Total Score of 17
		Sub-indicator: Distance to bus stop / rail station	0	683m to nearest bus stop ACF (Melbourn, Vicarage Close)
		Sub-indicator: Frequency of Public Transport	-	hourly service (26 Service)
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	+++	32 Minutes (Melbourn, Vicarage Close to Cambridge, Drummer Street) 9 Minutes (Melbourn, Vicarage Close to Royston, Bus Station)
		Sub-indicator: Distance for cycling to City Centre or Market Town	+++	4.97km ACF to Royston
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	0	No capacity constraints identified, safe access can be achieved.
		Will it make the transport network safer for and promote use of non-motorised modes?	+	The Highway Authority will require new development to provide or contribute to the provision of infrastructure to encourage more sustainable transport links both on and off site. Provision or contribution from this site would result in minor improvement to public transport, walking or cycling facilities.

Site No. Site 321
Address Papworth Everard, land at The Ridgeway
Location Papworth Everard
Category of site Minor Rural Centre
Site area 11.12

Theme	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	0	No previously developed land.
		Will it use land efficiently?		
		Will it protect and enhance the best and most versatile agricultural land?	-	Minor loss of best and most versatile agricultural land (Grades 1 and 2) - small site but all grade 2.
		Will it avoid the sterilisation of economic mineral reserves? Will it minimise the degradation/loss of soils due to new development?	0	Site not within an area designated in the Minerals and Waste LDF.
	Minimise waste production and support the reuse and recycling of waste products	Will it encourage reduction in household waste, and increase waste recovery and recycling?		
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	0	Development unlikely to impact on air quality. Site lies in an area where air quality acceptable.
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	0	Development compatible with neighbouring uses.
		Will it minimise, and where possible address, land contamination?	0	Development not on land likely to be contaminated.
		Will it protect and where possible enhance the quality of the water environment?	0	Development unlikely to affect water quality. Assumptions for a neutral impact are that appropriate standards and pollution control measures will be achieved through the development process, e.g. as part of Sustainable Drainage Systems (Suds).
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiversity?	0	No impact on protected sites and species (or impacts could be mitigated).
	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	0	Assumptions for a neutral impact are that existing features that warrant retention can be retained or appropriate mitigation will be achieved through the development process.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process.

Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	---	Significant negative impact (development conflicts with landscape character, with significant negative impacts incapable of mitigation) - the site is located on a ridge and therefore any built development would be a prominent, harsh edge to the village in the wide views across the undulating arable fields.
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	-	Minor negative impact (development conflicts with townscape character, minor negative impacts incapable of mitigation) - development of this site would change the the strong linear character of the village.
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Archaeological potential will require further information but the assumption for a neutral impact is that it is likely appropriate mitigation can be achieved through the development process.
	Create places, spaces and buildings that work well, wear well and look good	Will it lead to developments built to a high standard of design and good place making that reflects local character?		
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	0	Standard requirements for renewables would apply.
		Will it promote energy efficiency?		
		Will it minimise contributions to climate change through sustainable construction practices?		
	Reduce vulnerability to future climate change effects	Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	0	Flood Zone 1 and no drainage issues that cannot be appropriately addressed.
		Will it minimise the likely impacts of climate change on the development through appropriate design?		
		Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?		
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?		
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?		

Inclusive Communities - Housing	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	0	Neutral impact (existing features retained or appropriate mitigation). Assumption is standard requirements for open space would apply.
	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?		
		Will it provide for housing for the ageing population?		
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	No effect on pitch or plot provision.
Inclusive Communities - Redressing inequalities and involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	0	Minor Rural Centre
		Sub-Indicator: Distance to centre	0	602m from nearest centre ACF (Papworth Everard, Ermine Street North)
		Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	0	No facilities lost, and no new facilities proposed directly as a result of the development.
		Will improve relations between people from different backgrounds or social groups?		
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will it redress inequalities?		
		Will it increase the ability of people to influence decisions, including 'hard to reach' groups?		
	Encourage and enable the active involvement of local people in community activities	Will it encourage engagement with community activities?	0	No facilities lost, and no new facilities proposed directly as a result of the development.

Economic Activity		Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	0	Development would have no effect on employment land or premises.
	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	Development would have no effect on vitality or viability of existing centres. The indicator is likely to apply particularly to sites which include retail, offices, or leisure uses.
		Will it encourage the rural economy and diversification, and support sustainable tourism?		
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it contribute to providing a range of employment opportunities, in accessible locations?	+	23.08 minutes from site to nearest employment area with 2000+ employees. Only 1 employment area with 2000+ employees that can be accessed in less than 30mins - 1.6km walk.
		Will it improve the level of investment in key community services and infrastructure, including broadband?	+	Minor utilities infrastructure improvements required, but constraints can be addressed. Development of this site would require local and upstream reinforcements to the electricity network. There is insufficient spare capacity within the distribution zone to supply the total number of proposed properties which could arise if all the SHLAA sites with the zone were to be developed. The sewerage network is approaching capacity.
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve access to education and training, and support provision of skilled employees to the economy?	-	School capacity not sufficient, but significant issues can be adequately addressed.

Transport	Reduce the need to travel and promote more sustainable transport choices.	Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	0	Total Score of 14
		Sub-indicator: Distance to bus stop / rail station	+	535m to nearest bus stop ACF (Papworth Everard, Wood Lane)
		Sub-indicator: Frequency of Public Transport	---	less than hourly service (1 Service)
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	+++	29 Minutes (Papworth Everard, Wood Lane to Cambridge, Drummer Street) 14 Minutes (Papworth Everard, Wood Lane to St Ives, Bus Station)
		Sub-indicator: Distance for cycling to City Centre or Market Town	+	8.01km ACF to St. Ives
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	-	Minor negative effects incapable of mitigation. Possible capacity constraints - the A428 corridor is seriously limited in capacity between the A1 and A1198. At present there is no realistic prospect of resolving this.
		Will it make the transport network safer for and promote use of non-motorised modes?	0	No impact.

Site No. Site 322
Address Waterbeach, Land north of Bannold Road
Location Waterbeach
Category of site Minor Rural Centre
Site area 4.01

Theme	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	0	No previously developed land.
		Will it use land efficiently?		
		Will it protect and enhance the best and most versatile agricultural land?	0	Development would not affect best and most versatile agricultural land (Grades 1 and 2).
		Will it avoid the sterilisation of economic mineral reserves? Will it minimise the degradation/loss of soils due to new development?	0	A very small part of the site is within an area designated in the Minerals and Waste LDF but development would not have a negative impact
	Minimise waste production and support the reuse and recycling of waste products	Will it encourage reduction in household waste, and increase waste recovery and recycling?		
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	0	Development unlikely to impact on air quality. Site lies in an area where air quality acceptable.
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	-	Development compatible with neighbouring uses. Some minor to moderate additional road traffic noise generation impact on existing residential due to development related car movements but dependent on location of site entrance.
		Will it minimise, and where possible address, land contamination?	0	Development not on land likely to be contaminated.
		Will it protect and where possible enhance the quality of the water environment?	0	Assumptions for a neutral impact are that appropriate standards and pollution control measures will achieved through the development process, e.g. as part of Sustainable Drainage Systems (Suds). A majority of the development sites falls within the Waterbeach Level Internal Drainage District, which does not have any capacity to accept any direct discharge into its system above the green field run off rate. All surface water from the site would have to be balanced before it is released into the Boards system. We also have main drains adjacent to the site, therefore any works involving these drains would require the consent of the Board.
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiversity?	0	No impact on protected sites and species (or impacts could be mitigated). There is a group of protected trees located 105m to the south west.
	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	0	Assumptions for a neutral impact are that existing features that warrant retention can be retained or appropriate mitigation will be achieved through the development process.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process.

Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	-	Minor Negative Impact (Development conflicts with landscape character, minor negative impacts incapable of mitigation) - The site is located in a relatively open area separating the village from the Barracks to the north. It is in agricultural use. Bannold Road has sporadic development along the northern side and this, together with the open land, creates a rural character and the appearance of the countryside entering the village. If this site were developed it would intrude into the rural separation area between Waterbeach and the Barracks.
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	-	Minor Negative Impact (Development conflicts with townscape character, minor negative impacts incapable of mitigation) - The site is located in a relatively open area separating the village from the Barracks to the north. It is in agricultural use. Bannold Road has sporadic development along the northern side and this, together with the open land, creates a rural character and the appearance of the countryside entering the village. If this site were developed it would intrude into the rural separation area between Waterbeach and the Barracks.
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	0	Neutral impact (existing features retained, or appropriate mitigation possible). The tower of St John's Church provides a distinctive landmark within Waterbeach, being visible from many viewpoints to the east and south of the village. Archaeological potential will require further information but the assumption for a neutral impact is that it is likely appropriate mitigation can be achieved through the development process.
	Create places, spaces and buildings that work well, wear well and look good	Will it lead to developments built to a high standard of design and good place making that reflects local character?		
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	0	Standard requirements for renewables would apply.
		Will it promote energy efficiency?		
		Will it minimise contributions to climate change through sustainable construction practices?		
	Reduce vulnerability to future climate change effects	Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	0	Flood Zone 1 and no drainage issues that cannot be appropriately addressed.
		Will it minimise the likely impacts of climate change on the development through appropriate design?		
		Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?		
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?		
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?		

Inclusive Communities - Housing	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	0	Neutral impact (existing features retained or appropriate mitigation). Assumption is standard requirements for open space would apply.
	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?		
		Will it provide for housing for the ageing population?		
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	No effect on pitch or plot provision.
Inclusive Communities - Redressing inequalities and involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	0	Minor Rural Centre
		Sub-Indicator: Distance to centre	-	820m from nearest centre ACF (Waterbeach, Chapel Street)
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	0	No facilities lost, and no new facilities proposed directly as a result of the development.
		Will improve relations between people from different backgrounds or social groups?		
	Encourage and enable the active involvement of local people in community activities	Will it redress inequalities?		
		Will it increase the ability of people to influence decisions, including 'hard to reach' groups?		
		Will it encourage engagement with community activities?	0	No facilities lost, and no new facilities proposed directly as a result of the development.

Economic Activity		Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	0	Development would have no effect on employment land or premises.
	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	Development would have no effect on vitality or viability of existing centres. The indicator is likely to apply particularly to sites which include retail, offices, or leisure uses.
		Will it encourage the rural economy and diversification, and support sustainable tourism?		
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it contribute to providing a range of employment opportunities, in accessible locations?	+	23.50 minutes from site to nearest employment area with 2000+ employees. 6 employment areas with 2000+ employees that can be accessed in less than 30mins - 1.6km walk.
		Will it improve the level of investment in key community services and infrastructure, including broadband?	+++ / +	Development can use existing capacity in utilities infrastructure. However, there is insufficient spare mains water capacity within the distribution zone to supply the number of proposed properties which could arise if all the SHLAA sites within the zone were to be developed. The sewerage network is approaching capacity and will require investigation and possibly mitigation.
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve access to education and training, and support provision of skilled employees to the economy?	- / ---	Insufficient spare school capacity but potential for improvement to meet needs. Insufficient primary and secondary school capacity.

Transport	Reduce the need to travel and promote more sustainable transport choices.	Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	+	Total Score of 17
		Sub-indicator: Distance to bus stop / rail station	+++	250m to nearest bus stop ACF (Waterbeach, Fletcher Avenue)
		Sub-indicator: Frequency of Public Transport	-	Hourly service (9 Service)
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	+	28 Minutes (Waterbeach, Fletcher Avenue to Cambridge, Drummer Street)
		Sub-indicator: Distance for cycling to City Centre or Market Town	+	9.13km ACF to Cambridge City Centre
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	0	No capacity constraints identified, safe access can be achieved. On the whole, the in-fill sites are less likely to present an unacceptable pressure on the A14 given the majority of travel demand will be focused on Cambridge and credible alternatives to car travel could be available.
		Will it make the transport network safer for and promote use of non-motorised modes?	+	The Highway Authority will require new development to provide or contribute to the provision of infrastructure to encourage more sustainable transport links both on and off site. Provision or contribution from this site would result in minor improvement to public transport, walking or cycling facilities.

Site No. Site 323
Address Willingham, Land north of Rook Grove
Location Willingham
Category of site Minor Rural Centre
Site area 2.08

Theme	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	0	No previously developed land.
		Will it use land efficiently?		
		Will it protect and enhance the best and most versatile agricultural land?	-	Minor loss of best and most versatile agricultural land (Grades 1 and 2) - small site but all Grade 2.
		Will it avoid the sterilisation of economic mineral reserves? Will it minimise the degradation/loss of soils due to new development?	0	Site within an area designated in the Minerals and Waste LDF but development would not have a negative impact.
	Minimise waste production and support the reuse and recycling of waste products	Will it encourage reduction in household waste, and increase waste recovery and recycling?		
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	0	Development unlikely to impact on air quality. Site lies in an area where air quality acceptable.
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	-	Development compatible with neighbouring uses. Some minor to moderate additional road traffic noise generation impact on existing residential due to development related car movements but dependent on location of site entrance.
		Will it minimise, and where possible address, land contamination?	0	Development not on land likely to be contaminated
		Will it protect and where possible enhance the quality of the water environment?	0	Assumptions for a neutral impact are that appropriate standards and pollution control measures will be achieved through the development process, e.g. as part of Sustainable Drainage Systems (Suds).
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiversity?	0	No impact on protected sites and species (or impacts could be mitigated).
	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	0	Assumptions for a neutral impact are that existing features that warrant retention can be retained or appropriate mitigation will be achieved through the development process.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process. A footpath lies along the northern boundary of the site.

Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	-	Minor Negative Impact (Development conflicts with landscape character, minor negative impacts incapable of mitigation) - Development of the whole of this site, beyond Bourneys Manor Close, would have a significant adverse effect on the landscape and townscape setting of Willingham. Development would extend the built area of the village outwards into land that is open and rural in character. This would have an adverse effect on the setting of the Conservation Area and wider setting of Listed Buildings. It may be possible to accommodate a much smaller development on part of the site.
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	-	Minor Negative Impact (development conflicts with townscape character, minor negative impacts incapable of mitigation) - Development of the whole of this site, beyond Bourneys Manor Close, would have a significant adverse effect on the landscape and townscape setting of Willingham. Development would extend the built area of the village outwards into land that is open and rural in character. This would have an adverse effect on the setting of the Conservation Area and wider setting of Listed Buildings. It may be possible to accommodate a much smaller development on part of the site.
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	- / 0	Minor Negative Impact on historic Assets (incapable of satisfactory mitigation) – the site forms an important part of the setting of the Conservation Area and Grade II Listed Buildings. Archaeological potential will require further information but the assumption for a neutral impact is that it is likely appropriate mitigation can be achieved through the development process. It may be possible to accommodate a much smaller development on part of the site.
	Create places, spaces and buildings that work well, wear well and look good	Will it lead to developments built to a high standard of design and good place making that reflects local character?		
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	0	Standard requirements for renewables would apply.
		Will it promote energy efficiency?		
		Will it minimise contributions to climate change through sustainable construction practices?		
	Reduce vulnerability to future climate change effects	Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	---	Flood Zone 3 (or other form of flood risk incapable of appropriate mitigation).
		Will it minimise the likely impacts of climate change on the development through appropriate design?		
Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?				
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?		
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?		

Inclusive Communities - Housing	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	0	Neutral impact (existing features retained or appropriate mitigation).
	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?		
		Will it provide for housing for the ageing population?		
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	No effect on pitch or plot provision.
Inclusive Communities - Redressing inequalities and involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	0	Minor Rural Centre
		Sub-Indicator: Distance to centre	+++	268m from nearest centre ACF (Willingham, High Street)
		Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	0	No facilities lost, and no new facilities proposed directly as a result of the development.
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will improve relations between people from different backgrounds or social groups?		
		Will it redress inequalities?		
		Will it increase the ability of people to influence decisions, including 'hard to reach' groups?		
Encourage and enable the active involvement of local people in community activities	Will it encourage engagement with community activities?	0	No facilities lost, and no new facilities proposed directly as a result of the development.	

Economic Activity		Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	0	Development would have no effect on employment land or premises.
	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	Development would have no effect on vitality or viability of existing centres. The indicator is likely to apply particularly to sites which include retail, offices, or leisure uses.
		Will it encourage the rural economy and diversification, and support sustainable tourism?		
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it contribute to providing a range of employment opportunities, in accessible locations?	+	21.01 minutes from site to nearest employment area with 2000+ employees. 3 employment areas with 2000+ employees that can be accessed in less than 30mins - 1.6km walk.
		Will it improve the level of investment in key community services and infrastructure, including broadband?	+++	Development can use existing capacity in utilities infrastructure. However, the sewerage network is approaching capacity and will require investigation and possibly mitigation.
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve access to education and training, and support provision of skilled employees to the economy?	-	Insufficient spare school capacity but potential for improvement to meet needs. Insufficient secondary school capacity.

Transport	Reduce the need to travel and promote more sustainable transport choices.	Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	0	Total Score of 14
		Sub-indicator: Distance to bus stop / rail station	+++	265m to nearest bus stop ACF (Willingham, Osborn Close)
		Sub-indicator: Frequency of Public Transport	-	Hourly service (Citi 5)
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	-	44 Minutes (Willingham, Osborn Close to Cambridge, Emmanuel Street)
		Sub-indicator: Distance for cycling to City Centre or Market Town	+	8.63km ACF to St. Ives
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	--- / -	Insufficient capacity or access constraints that cannot be adequately mitigated. The Highways Agency comment that this site is in an area heavily reliant on the A14 for strategic access. It is difficult to see more than a small proportion of these sites being deliverable prior to major improvements to the A14, and even this could require substantial mitigation measures. It is unclear whether appropriate access can be secured to the site.
		Will it make the transport network safer for and promote use of non-motorised modes?	0	No impact.

Site No. Site 324
Address Bassingbourn, 2 parcels north of High Street
Location Bassingbourn
Category of site Group Village
Site area 2.5362

Theme	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	0	No previously developed land.
		Will it use land efficiently?		
		Will it protect and enhance the best and most versatile agricultural land?	-	Minor loss of best and most versatile agricultural land (Grades 1 and 2) - small site but all Grade 2.
		Will it avoid the sterilisation of economic mineral reserves? Will it minimise the degradation/loss of soils due to new development?	0	Site not within an area designated in the Minerals and Waste LDF.
	Minimise waste production and support the reuse and recycling of waste products	Will it encourage reduction in household waste, and increase waste recovery and recycling?		
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	0	Development unlikely to impact on air quality. Site lies in an area where air quality acceptable.
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	0/-	Development compatible with neighbouring uses. Some minor to moderate additional road traffic noise generation on existing residential due to development related car movements but dependent on location of site entrance.
		Will it minimise, and where possible address, land contamination?	0/+	The site would require investigation due to historic maps indicating some infilled land. Potential for benefits through remediation of any contamination.
		Will it protect and where possible enhance the quality of the water environment?	0	Development unlikely to effect water quality. Assumptions for a neutral impact are that appropriate standards and pollution control measures will be achieved through the development process, e.g. as part of Sustainable Drainage Systems (SuDS).
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiversity?	0	No impact on protected sites and species (or impacts could be mitigated).
	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	0	Assumptions for a neutral impact are that existing features that warrant retention can be retained or appropriate mitigation will be achieved through the development process.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process.

Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	-/---	Minor negative impact (development conflicts with landscape character, minor negative impacts incapable of mitigation) - development of the site would result in the encroachment of built development into the enclosed fields that form a soft edge to the village and provide a rural setting for the listed buildings and conservation area, and would also change the rural character of this wooded and enclosed area of the village.
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	-	Minor negative impact (development conflicts with townscape character, minor negative impacts incapable of mitigation) - development of this site would be contrary to the pattern of single depth development in the historic core of this part of village.
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	---	Significant negative impact on historic assets (incapable of satisfactory mitigation) - development of the site is likely to have a significant adverse impact on the settings of the listed buildings and the Conservation Area. Archaeological potential will require further information but the assumption for a neutral impact is that it is likely appropriate mitigation can be achieved through the development process.
	Create places, spaces and buildings that work well, wear well and look good	Will it lead to developments built to a high standard of design and good place making that reflects local character?		
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	0	Standard requirements for renewables would apply.
		Will it promote energy efficiency?		
	Reduce vulnerability to future climate change effects	Will it minimise contributions to climate change through sustainable construction practices?		
		Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	0/-	The majority of the site is Flood Zone 1. There are small areas of Flood Zones 2, 3a and 3b along the eastern boundary, part of the southern boundary and also running east-west across the centre of the site.
		Will it minimise the likely impacts of climate change on the development through appropriate design?		
		Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?		
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?		
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?		

Inclusive Communities - Housing	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	0	Neutral impact (existing features retained or appropriate mitigation).
	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?		
		Will it provide for housing for the ageing population?		
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	No effect on pitch or plot provision.
Inclusive Communities - Redressing inequalities and involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	-	Group Village
		Sub-Indicator: Distance to centre	+++	226m from nearest centre ACF (Bassingbourn, High Street)
		Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	0/+	New facilities or improved existing facilities are proposed of minor benefit. The promoter has indicated that the site will include a relocated Spar shop with public car park.
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will improve relations between people from different backgrounds or social groups?		
		Will it redress inequalities?		
		Will it increase the ability of people to influence decisions, including 'hard to reach' groups?		
	Encourage and enable the active involvement of local people in community activities	Will it encourage engagement with community activities?	+	New village hall is proposed.

Economic Activity		Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	0	Development would have no effect on employment land or premises.
	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	Development would have no effect on vitality or viability of existing centres. The indicator is likely to apply particularly to sites which include retail, offices, or leisure uses.
		Will it encourage the rural economy and diversification, and support sustainable tourism?		
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it contribute to providing a range of employment opportunities, in accessible locations?	+	20.89 minutes from site to nearest employment area with 2000+ employees. 2 employment areas with 2000+ employees that can be accessed in less than 30mins - 1.6km walk.
		Will it improve the level of investment in key community services and infrastructure, including broadband?	+	Minor utilities infrastructure improvements required, but constraints can be addressed. There is insufficient spare capacity within the distribution zone to supply the total number of proposed properties which could arise if all the SHLAA sites with the zone were to be developed. The sewerage network is approaching capacity.
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve access to education and training, and support provision of skilled employees to the economy?	-	School capacity not sufficient, but significant issues can be adequately addressed.

Transport	Reduce the need to travel and promote more sustainable transport choices.	Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	+	Total Score of 18
		Sub-indicator: Distance to bus stop / rail station	+++	251m to nearest bus stop ACF (Bassingbourn, The Limes)
		Sub-indicator: Frequency of Public Transport	---	Less than hourly service (127 service)
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	+++	20-25 Minutes (Bassingbourn, The Limes to Royston, Bus Station)
		Sub-indicator: Distance for cycling to City Centre or Market Town	+++	4.44km ACF to Royston
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	-	Minor negative effects incapable of mitigation. Access constraints - the promoter has indicated that the primary access to the site will be created by demolishing the existing Spar shop and the barn/garage at 37 High Street. Secondary access will also be provided via Church Close and Park Close.
		Will it make the transport network safer for and promote use of non-motorised modes?	0	No impact.

Site No. Site 326
Address Comberton, Land at Bennell Farm
Location Comberton
Category of site Group Village
Site area 6.27

Theme	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	0	No previously developed land.
		Will it use land efficiently?		
		Will it protect and enhance the best and most versatile agricultural land?	-	Minor loss of best and most versatile agricultural land (Grades 1 and 2) - small site but all Grade 2.
		Will it avoid the sterilisation of economic mineral reserves? Will it minimise the degradation/loss of soils due to new development?	0	Site not within an area designated in the Minerals and Waste LDF.
	Minimise waste production and support the reuse and recycling of waste products	Will it encourage reduction in household waste, and increase waste recovery and recycling?		
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	0	Development unlikely to impact on air quality. Site lies in an area where air quality acceptable.
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	0	Development compatible with neighbouring uses.
		Will it minimise, and where possible address, land contamination?	0	Development not on land likely to be contaminated
		Will it protect and where possible enhance the quality of the water environment?	0	Development unlikely to affect water quality. Assumptions for a neutral impact are that appropriate standards and pollution control measures will be achieved through the development process and will mitigate any impact on groundwater. Almost all of site included within a protection zone.
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiversity?	0	No impact on protected sites and species (or impacts could be mitigated).
	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	0	Assumptions for a neutral impact are that existing features that warrant retention can be retained or appropriate mitigation will be achieved through the development process.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process.

Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	0	Neutral impact (generally compatible, or capable of being made compatible with local landscape character). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process.
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	0	Neutral impact (generally compatible, or capable of being made compatible with local townscape character). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process.
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Archaeological potential will require further information but the assumption for a neutral impact is that it is likely appropriate mitigation can be achieved through the development process.
	Create places, spaces and buildings that work well, wear well and look good	Will it lead to developments built to a high standard of design and good place making that reflects local character?		
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	0	Standard requirements for renewables would apply.
		Will it promote energy efficiency?		
		Will it minimise contributions to climate change through sustainable construction practices?		
	Reduce vulnerability to future climate change effects	Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	0	Site in Flood Zone 1 and no drainage issues that cannot be appropriately addressed.
		Will it minimise the likely impacts of climate change on the development through appropriate design?		
Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?				
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?		
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?		

Inclusive Communities - Housing	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	0	Neutral impact (existing features retained or appropriate mitigation).
	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?		
		Will it provide for housing for the ageing population?		
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	No effect on pitch or plot provision.
Inclusive Communities - Redressing inequalities and involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	-	Group Village
		Sub-Indicator: Distance to centre	0	665m of nearest centre ACF (Comberton, West Street / Barton Road)
		Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	0	No facilities lost, and no new facilities proposed directly as a result of the development.
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will improve relations between people from different backgrounds or social groups?		
		Will it redress inequalities?		
		Will it increase the ability of people to influence decisions, including 'hard to reach' groups?		
	Encourage and enable the active involvement of local people in community activities	Will it encourage engagement with community activities?	0	No facilities lost, and no new facilities proposed directly as a result of the development.

Economic Activity		Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	0	Development would have no effect on employment land or premises.
	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	Development would have no effect on vitality or viability of existing centres. The indicator is likely to apply particularly to sites which include retail, offices, or leisure uses
		Will it encourage the rural economy and diversification, and support sustainable tourism?		
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it contribute to providing a range of employment opportunities, in accessible locations?	+	27.81 minutes from site to nearest employment area with 2000+ employees. Only 1 employment area with 2000+ employees that can be accessed in less than 30mins - 1.6km walk.
		Will it improve the level of investment in key community services and infrastructure, including broadband?	+	Minor Utilities Infrastructure improvements required, but constraints can be addressed. There is insufficient spare mains water capacity within the distribution zone to supply the number of proposed properties which could arise if all the SHLAA sites within the zone were to be developed. The sewerage network is at capacity and will require mitigation.
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve access to education and training, and support provision of skilled employees to the economy?	+	Insufficient spare school capacity but potential for improvement to meet needs. Current spare capacity at the local primary School. Secondary places deficit is being addressed by the construction of a new school at Cambourne to relieve Comberton VC.

Transport	Reduce the need to travel and promote more sustainable transport choices.	Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	+	Total Score of 18
		Sub-indicator: Distance to bus stop / rail station	+++	270m to nearest bus stop (Comberton, Kentings)
		Sub-indicator: Frequency of Public Transport	+	Hourly service (18 service)
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	+	23 Minutes (Comberton, Kentings to Cambridge, Drummer Street)
		Sub-indicator: Distance for cycling to City Centre or Market Town	+	7.77km ACF to Cambridge City Centre
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	0	No capacity constraints identified, safe access can be achieved. A junction located on Long Road would be acceptable to the Highway Authority. The proposed site is acceptable in principle subject to detailed design.
		Will it make the transport network safer for and promote use of non-motorised modes?	0	No impact.

Site No. Site 327
Address Milton, Land west of A10
Location Milton
Category of site Group Village
Site area 9.54

Theme	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	0	No previously developed land.
		Will it use land efficiently?		
		Will it protect and enhance the best and most versatile agricultural land?	-	Minor loss of best and most versatile agricultural land (Grades 1 and 2) - small site but the majority of the site is Grade 2.
		Will it avoid the sterilisation of economic mineral reserves? Will it minimise the degradation/loss of soils due to new development?	0	Site not within an area designated in the Minerals and Waste LDF.
	Minimise waste production and support the reuse and recycling of waste products	Will it encourage reduction in household waste, and increase waste recovery and recycling?		
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	-	Development could impact on air quality, with minor negative impacts incapable of mitigation. The site is located close to the Councils' Air Quality Management
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	---	Development not compatible with neighbouring commercial uses. Odour from the adjacent landfill site and Household Waste Recycling Centre would have a significant negative impact in terms of health and well being and a poor quality living environment and possible nuisance.
		Will it minimise, and where possible address, land contamination?	+	Potential for minor benefits through remediation of minor contamination. The site is adjacent to a known landfill site, therefore investigation will be required
		Will it protect and where possible enhance the quality of the water environment?	0	Development unlikely to affect water quality. Assumptions for a neutral impact are that appropriate standards and pollution control measures will be achieved through the development process, e.g. as part of Sustainable Drainage Systems (Suds).
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiversity?	0	No impact on protected sites and species (or impacts could be mitigated).
	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	0	Assumptions for a neutral impact are that existing features that warrant retention can be retained or appropriate mitigation will be achieved through the development process.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process.

Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	---	Significant negative impact (development conflicts with landscape character, with significant negative impacts incapable of mitigation) - development of this site would result in considerable encroachment of built development into the open farmland to the north of the village.
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	---	Significant negative impact (development conflicts with townscape character, with significant negative impacts incapable of mitigation) - development of this site would result in built development in an area characterised by agricultural buildings and individual dwellings.
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Archaeological potential will require further information but the assumption for a neutral impact is that it is likely appropriate mitigation can be achieved through the development process.
	Create places, spaces and buildings that work well, wear well and look good	Will it lead to developments built to a high standard of design and good place making that reflects local character?		
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	0	Standard requirements for renewables would apply.
		Will it promote energy efficiency?		
		Will it minimise contributions to climate change through sustainable construction practices?		
	Reduce vulnerability to future climate change effects	Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	0	Flood Zone 1 and no drainage issues that cannot be appropriately addressed.
		Will it minimise the likely impacts of climate change on the development through appropriate design?		
		Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?		
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?		
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?		

Inclusive Communities - Housing	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	0	Neutral impact (existing features retained or appropriate mitigation). Assumption is standard requirements for open space would apply.
	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?		
		Will it provide for housing for the ageing population?		
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	No effect on pitch or plot provision.
Inclusive Communities - Redressing inequalities and involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	-	Group Village
		Sub-Indicator: Distance to centre	-	870m of nearest centre ACF (Milton, High Street)
		Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	0	No facilities lost, and no new facilities proposed directly as a result of the development. The proposal involves the loss of an area of the golf course but all other facilities are being retained.
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will improve relations between people from different backgrounds or social groups?		
		Will it redress inequalities?		
		Will it increase the ability of people to influence decisions, including 'hard to reach' groups?		
	Encourage and enable the active involvement of local people in community activities	Will it encourage engagement with community activities?	0	No facilities lost, and no new facilities proposed directly as a result of the development.

Economic Activity		Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	0	Development would have no effect on employment land or premises.
	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	Development would have no effect on vitality or viability of existing centres. The indicator is likely to apply particularly to sites which include retail, offices, or leisure uses.
		Will it encourage the rural economy and diversification, and support sustainable tourism?		
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it contribute to providing a range of employment opportunities, in accessible locations?	+++	14.40 minutes from site to nearest employment area with 2000+ employees. 9 employment areas with 2000+ employees that can be accessed in less than 30mins - 1.6km walk.
		Will it improve the level of investment in key community services and infrastructure, including broadband?	+	Minor utilities infrastructure improvements required, but constraints can be addressed. There is insufficient spare mains water capacity within the distribution zone to supply the number of proposed properties which could arise if all the SHLAA sites within the zone were to be developed. The sewerage network is close to capacity.
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve access to education and training, and support provision of skilled employees to the economy?	-	Insufficient spare school capacity but potential for improvement to meet needs. Insufficient secondary and primary school places.

Transport	Reduce the need to travel and promote more sustainable transport choices.	Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	+++	Total Score of 24
		Sub-indicator: Distance to bus stop / rail station	+++	292m to nearest bus stop (Milton, Park and Ride)
		Sub-indicator: Frequency of Public Transport	+++	10 minute service (99 P&R service)
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	+++	20 Minutes (Milton, Park and Ride to Cambridge, Emmanuel Street)
		Sub-indicator: Distance for cycling to City Centre or Market Town	+++	4.65km ACF to Cambridge City Centre
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	0	No capacity constraints identified, safe access can be achieved.
		Will it make the transport network safer for and promote use of non-motorised modes?	0	No impact.

Site No. Site 330
Address Great Chesterford, Land adjacent to Whiteways, Ickleton Road
Location Great Chesterford
Category of site Rural Centre
Site area 3.9

Theme	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	0	No previously developed land.
		Will it use land efficiently?		
	Minimise waste production and support the reuse and recycling of waste products	Will it protect and enhance the best and most versatile agricultural land?	-	Minor loss of best and most versatile agricultural land (Grades 1 and 2) - small site but all Grade 2.
		Will it avoid the sterilisation of economic mineral reserves? Will it minimise the degradation/loss of soils due to new development?	0	A large part of the site is within an area designated in the Minerals and Waste LDF but development would not have a negative impact.
		Will it encourage reduction in household waste, and increase waste recovery and recycling?		
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	-	Site lies near source of air pollution with minor negative impacts incapable of mitigation. Site lies adjacent to the M11 / A11 and mainline railway.
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	---	The site is subject to traffic and railway noise. Significant levels of ambient / diffuse traffic noise dominant the environment both during the day and night. This site requires full noise and air quality assessments including consideration of any noise attenuation measures such as noise barriers / berms.
	Will it protect and where possible enhance the quality of the water environment?	Will it minimise, and where possible address, land contamination?	0	Development not on land likely to be contaminated.
		Will it protect and where possible enhance the quality of the water environment?	0	Development unlikely to affect water quality. Assumptions for a neutral impact are that appropriate standards and pollution control measures will be achieved through the development process, e.g. as part of Sustainable Drainage Systems (Suds).
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiversity?	0	No impact on protected sites and species (or impacts could be mitigated).
	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	0	Assumptions for a neutral impact are that existing features that warrant retention can be retained or appropriate mitigation will be achieved through the development process.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process.

Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	0	Neutral impact (generally compatible, or capable of being made compatible with local landscape character). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process.
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	---	Significant Negative Impact (Development conflicts with townscape character, with significant negative impacts incapable of mitigation) - the site does not relate well to Great Chesterford, separated from the built-up area by the mainline railway line on an embankment.
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Archaeological potential will require further information but the assumption for a neutral impact is that it is likely appropriate mitigation can be achieved through the development process.
	Create places, spaces and buildings that work well, wear well and look good	Will it lead to developments built to a high standard of design and good place making that reflects local character?		
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	0	Standard requirements for renewables would apply.
		Will it promote energy efficiency?		
		Will it minimise contributions to climate change through sustainable construction practices?		
	Reduce vulnerability to future climate change effects	Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	0	Flood Zone 1 and no drainage issues that cannot be appropriately addressed.
		Will it minimise the likely impacts of climate change on the development through appropriate design?		
		Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?		
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?		
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?		

Inclusive Communities - Housing	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	0	Neutral impact (existing features retained or appropriate mitigation). Assumption is standard requirements for open space would apply.
	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?		
		Will it provide for housing for the ageing population?		
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	No effect on pitch or plot provision.
Inclusive Communities - Redressing inequalities and involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	0	No facilities lost, and no new facilities proposed directly as a result of the development.
		Sub-Indicator: Distance to centre	0	Beyond 1000m from nearest centre ACF (1,381m to Ickleton, Abbey Street) Within 800m of Great Chesterford Centre
		Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	0	No facilities lost, and no new facilities proposed directly as a result of the development.
		Will improve relations between people from different backgrounds or social groups?		
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will it redress inequalities?		
		Will it increase the ability of people to influence decisions, including 'hard to reach' groups?		
	Encourage and enable the active involvement of local people in community activities	Will it encourage engagement with community activities?	0	No facilities lost, and no new facilities proposed directly as a result of the development.

Economic Activity		Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	0	Development would have no effect on employment land or premises.
	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	Development would have no effect on vitality or viability of existing centres. The indicator is likely to apply particularly to sites which include retail, offices, or leisure uses.
		Will it encourage the rural economy and diversification, and support sustainable tourism?		
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it contribute to providing a range of employment opportunities, in accessible locations?	+	15.60 minutes from site to nearest employment area with 2000+ employees. 3 employment areas with 2000+ employees that can be accessed in less than 30mins - 1.6km walk.
		Will it improve the level of investment in key community services and infrastructure, including broadband?	-	Major utilities Infrastructure improvements required, but constraints can be addressed. The electricity, mains water, gas and sewerage systems will need reinforcement to increase capacity.
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve access to education and training, and support provision of skilled employees to the economy?	-	School capacity not sufficient, but significant issues can be adequately addressed.

Transport	Reduce the need to travel and promote more sustainable transport choices.	Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	+	Total Score of 18.
		Sub-indicator: Distance to bus stop / rail station	+++	221m to nearest bus stop ACF (Great Chesterford, Station Turn) 425m to nearest train station ACF (Great Chesterford)
		Sub-indicator: Frequency of Public Transport	-	Hourly Service (Citi 7) Hourly Service (Train)
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	+++	66 Minutes (Great Chesterford, Station Turn to Cambridge, Emmanuel Street) 19 Minutes (Great Chesterford, Station Turn to Saffron Walden, Station Street) 16 Minutes (Great Chesterford Station to Cambridge Station)
		Sub-indicator: Distance for cycling to City Centre or Market Town	+	5.56km ACF to Saffron Walden
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	-	Minor negative effects incapable of mitigation. Access constraints - The Highway Authority has concerns over this site as it is very close to the main trunk network and therefore has the potential to impact on the working of the network as a whole.
		Will it make the transport network safer for and promote use of non-motorised modes?	0	No impact.

Site No. Site 331
Address East Farm
Location Melbourn
Category of site Minor Rural Centre
Site area 2.83

Theme	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	0	No previously developed land.
		Will it use land efficiently?		
		Will it protect and enhance the best and most versatile agricultural land?	-	Minor loss of best and most versatile agricultural land (Grades 1 and 2)
		Will it avoid the sterilisation of economic mineral reserves? Will it minimise the degradation/loss of soils due to new development?	0	Site not within an area designated in the Minerals and Waste LDF.
	Minimise waste production and support the reuse and recycling of waste products	Will it encourage reduction in household waste, and increase waste recovery and recycling?		
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	0	Development unlikely to impact on air quality. Site lies in an area where air quality acceptable.
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	0	Development compatible with neighbouring uses.
		Will it minimise, and where possible address, land contamination?	+	Potential contamination from agricultural use, potential for minor benefits through remediation of minor contamination
		Will it protect and where possible enhance the quality of the water environment?	0	Assumptions for a neutral impact are that appropriate standards and pollution control measures will be achieved through the development process, e.g. as part of Sustainable Drainage Systems (Suds).
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiversity?	0	No impact on protected sites and species (or impacts could be mitigated).
	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	0	Assumptions for a neutral impact are that existing features that warrant retention can be retained or appropriate mitigation will be achieved through the development process.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process.

Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	0/-	Minor Negative Impact (Development conflicts with landscape character, minor negative impacts incapable of mitigation) to neutral impact (generally compatible, or capable of being made compatible with local landscape character). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process. Development would have an adverse effect on the landscape setting of Melbourn through the development of an enclosed orchard which adds to the rural setting of the village. The impact of this could be mitigated if the site is developed with site 320 to create a straight village edge running between the new development on New Road and the south east corner of the orchard and a new soft green edge is created on the southern boundary of the site.
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	0	Neutral impact (generally compatible, or capable of being made compatible with local townscape character). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process.
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Archaeological potential will require further information but the assumption for a neutral impact is that it is likely appropriate mitigation can be achieved through the development process.
	Create places, spaces and buildings that work well, wear well and look good	Will it lead to developments built to a high standard of design and good place making that reflects local character?		
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	0	Standard requirements for renewables would apply.
		Will it promote energy efficiency?		
		Will it minimise contributions to climate change through sustainable construction practices?		
	Reduce vulnerability to future climate change effects	Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	0	Flood Zone 1 and no drainage issues that cannot be appropriately addressed.
		Will it minimise the likely impacts of climate change on the development through appropriate design?		
	Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?			
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?		
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?		

Inclusive Communities - Housing	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	0	Neutral impact (existing features retained or appropriate mitigation).
	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?		
		Will it provide for housing for the ageing population?		
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	No effect on pitch or plot provision.
Inclusive Communities - Redressing inequalities and involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	0	Minor Rural Centre
		Sub-Indicator: Distance to centre	-	813m from nearest centre ACF (Melbourn, High Street)
		Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	0	No facilities lost, and no new facilities proposed directly as a result of the development.
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will improve relations between people from different backgrounds or social groups?		
		Will it redress inequalities?		
		Will it increase the ability of people to influence decisions, including 'hard to reach' groups?		
Encourage and enable the active involvement of local people in community activities	Will it encourage engagement with community activities?	0	No facilities lost, and no new facilities proposed directly as a result of the development.	

Economic Activity		Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	0	Development would have no effect on employment land or premises.
	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	Development would have no effect on vitality or viability of existing centres. The indicator is likely to apply particularly to sites which include retail, offices, or leisure uses.
		Will it encourage the rural economy and diversification, and support sustainable tourism?		
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it contribute to providing a range of employment opportunities, in accessible locations?	+++	11.88 minutes from site to nearest employment area with 2000+ employees. Only 1 employment area with 2000+ employees that can be accessed in less than 30mins - 1.6km walk.
		Will it improve the level of investment in key community services and infrastructure, including broadband?	+++/+	Development can use existing capacity in utilities infrastructure. The sewerage network is approaching capacity and will require investigation and possibly mitigation.
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve access to education and training, and support provision of skilled employees to the economy?	+++	Sufficient surplus capacity available in all catchment schools.

Transport	Reduce the need to travel and promote more sustainable transport choices.	Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	+	Total score of 16.
		Sub-indicator: Distance to bus stop / rail station	+	507m to nearest bus stop ACF (Melbourn, Russett Way)
		Sub-indicator: Frequency of Public Transport	-	hourly service (26 Service)
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	+++	31 Minutes (Melbourn, Russett Way to Cambridge, Emmanuel Street) 11 Minutes (Melbourn, Russett Way to Royston, Bus Station)
		Sub-indicator: Distance for cycling to City Centre or Market Town	+	5.24km ACF centre of site to Royston Market.
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	0	No capacity constraints identified, safe access can be achieved.
		Will it make the transport network safer for and promote use of non-motorised modes?	+	The Highway Authority will require new development to provide or contribute to the provision of infrastructure to encourage more sustainable transport links both on and off site. Provision or contribution from this site would result in minor improvement to public transport, walking or cycling facilities.

Site No. Site 334
Address Cambridge, Fen Road
Location Cambridge
Category of site Edge of Cambridge
Site area 1.74

Theme	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	0	0% to 24% Previously Developed Land (PDL)
		Will it use land efficiently?		
		Will it protect and enhance the best and most versatile agricultural land?	0	Development would not affect best and most versatile agricultural land (Grades 1 and 2).
		Will it avoid the sterilisation of economic mineral reserves? Will it minimise the degradation/loss of soils due to new development?	0	Site not within an area designated in the Minerals and Waste LDF.
	Minimise waste production and support the reuse and recycling of waste products	Will it encourage reduction in household waste, and increase waste recovery and recycling?		
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	0	Site lies near source of air pollution, or development could impact on air quality, with minor negative impacts incapable of mitigation.
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	---	Will create significant negative impacts to, or as a result of, the development, incapable of adequate mitigation.
		Will it minimise, and where possible address, land contamination?	+	The site was used for storage and contains an area of filled land. Potential for minor benefits through remediation of minor contamination.
		Will it protect and where possible enhance the quality of the water environment?	0	Development unlikely to affect water quality. Assumptions for a neutral impact are that appropriate standards and pollution control measures will be achieved through the development process, e.g. as part of Sustainable Drainage Systems (Suds).
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiversity?	0	No impact on protected sites and species (or impacts could be mitigated).
	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	0	Assumptions for a neutral impact are that existing features that warrant retention can be retained or appropriate mitigation will be achieved through the development process.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process.

Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	+ / 0	Minor Positive Impact (Development would relate to local landscape character and offer opportunities for landscape enhancement) - site used for open storage and could be visually improved.
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	- / 0	Minor Negative Impact (development conflicts with townscape character, minor negative impacts incapable of mitigation) - site sits between a caravan site and light industrial buildings. As such residential development would be out of character with the street scene on either side. However the caravan site has been allocated for development in the Cambridge Local Plan
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Archaeological potential will require further information but the assumption for a neutral impact is that it is likely appropriate mitigation can be achieved through the development process.
	Create places, spaces and buildings that work well, wear well and look good	Will it lead to developments built to a high standard of design and good place making that reflects local character?		
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	0	Standard requirements for renewables would apply.
		Will it promote energy efficiency?		
	Reduce vulnerability to future climate change effects	Will it minimise contributions to climate change through sustainable construction practices?		
		Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	0	Flood Zone 1 and no drainage issues that cannot be appropriately addressed.
		Will it minimise the likely impacts of climate change on the development through appropriate design?		
		Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?		
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?		
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?		

Inclusive Communities - Housing	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	0	Neutral impact (existing features retained or appropriate mitigation). Assumption is standard requirements for open space would apply.
	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?		
		Will it provide for housing for the ageing population?		
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	-/---	Site currently allocated for Gypsy and Traveller pitches.
Inclusive Communities - Redressing Inequalities and involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	+++	Edge of Cambridge
		Sub-Indicator: Distance to centre	-	882m ACF to Fen Ditton High Street
		Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	0	No facilities lost, and no new facilities proposed directly as a result of the development.
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will improve relations between people from different backgrounds or social groups?		
		Will it redress inequalities?		
		Will it increase the ability of people to influence decisions, including 'hard to reach' groups?		
	Encourage and enable the active involvement of local people in community activities	Will it encourage engagement with community activities?	0	No facilities lost, and no new facilities proposed directly as a result of the development.

Economic Activity		Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	-	Development would have a minor negative effect on employment opportunities, as a result of the loss of existing employment land.
	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	Development would have no effect on vitality or viability of existing centres. The indicator is likely to apply particularly to sites which include retail, offices, or leisure uses.
		Will it encourage the rural economy and diversification, and support sustainable tourism?		
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it contribute to providing a range of employment opportunities, in accessible locations?	+++	11.00 minutes from site to nearest employment area with 2000+ employees. 7 employment areas with 2000+ employees that can be accessed in less than 30mins - 1.6km walk.
		Will it improve the level of investment in key community services and infrastructure, including broadband?	-	Major utilities Infrastructure improvements required, but constraints can be addressed. The electricity, mains water, gas and sewerage systems will need reinforcement to increase capacity.
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve access to education and training, and support provision of skilled employees to the economy?	+	School capacity constraints but potential for improvement to meet needs

Transport	Reduce the need to travel and promote more sustainable transport choices.	Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	+++	Total Score 20
		Sub-indicator: Distance to bus stop / rail station	0	768m ACF from the centre of the site to the nearest bus stop with Citi 2 service (Chesterton, Franks Lane).
		Sub-indicator: Frequency of Public Transport	+++	Citi 2 - 10 Minute Service
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	+++	14 Minutes from to Cambridge (Chesterton, Franks Lane to Cambridge, Emmanuel Street)
		Sub-indicator: Distance for cycling to City Centre or Market Town	+++	3.37km ACF to Cambridge Market
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	0	No capacity constraints identified, safe access can be achieved.
		Will it make the transport network safer for and promote use of non-motorised modes?	0	No impact.

Site No. Site 335
Address Fulbourn, Land to the rear of 12-18 Teversham Road
Location Fulbourn
Category of site Rural Centre
Site area 0.39

Theme	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	0	Site includes site of one residential property
		Will it use land efficiently?		
		Will it protect and enhance the best and most versatile agricultural land?	0	Development would not affect best and most versatile agricultural land (Grades 1 and 2). Very small part of the site Grade 2.
		Will it avoid the sterilisation of economic mineral reserves? Will it minimise the degradation/loss of soils due to new development?	0	Site not within an area designated in the Minerals and Waste LDF.
	Minimise waste production and support the reuse and recycling of waste products	Will it encourage reduction in household waste, and increase waste recovery and recycling?		
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	0	Development unlikely to impact on air quality. Site lies in an area where air quality acceptable
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	-	Will create minor negative impacts to, or as a result of, the development, with minor negative impacts incapable of mitigation. Further investigation and mitigation will be required to address the physical considerations, including possible noise and odour.
		Will it minimise, and where possible address, land contamination?	+	Site is adjacent to current industrial/commercial use and railway line. Potential for minor benefits through remediation of minor contamination.
		Will it protect and where possible enhance the quality of the water environment?	-	Development has potential to affect water quality, with minor negative impacts incapable of mitigation The site within Groundwater Source Protection Zone 1 which does not rule out development but may influence land use or require pollution control measures. There is a high water table in the general area.
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiversity?	0	No impact on protected sites and species (or impacts could be mitigated).
	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	0	Assumptions for a neutral impact are that existing features that warrant retention can be retained or appropriate mitigation will be achieved through the development process.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process.

Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	0	No impact (generally compatible, or capable of being made compatible with local landscape character)
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	-	Minor Negative Impact (development conflicts with townscape character, minor negative impacts incapable of mitigation) - backland development that does not relate well to street-scene.
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Archaeological potential will require further information but the assumption for a neutral impact is that it is likely appropriate mitigation can be achieved through the development process
	Create places, spaces and buildings that work well, wear well and look good	Will it lead to developments built to a high standard of design and good place making that reflects local character?		
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	0	Standard requirements for renewables would apply.
		Will it promote energy efficiency?		
		Will it minimise contributions to climate change through sustainable construction practices?		
	Reduce vulnerability to future climate change effects	Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	--	High groundwater level so although site is not in high flood zone it has had localised flooding
		Will it minimise the likely impacts of climate change on the development through appropriate design?		
		Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?		
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?		
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?		

Inclusive Communities - Housing	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	0	Neutral impact (existing features retained or appropriate mitigation). Assumption is standard requirements for open space would apply.
	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?		
		Will it provide for housing for the ageing population?		
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	No effect on pitch or plot provision.
Inclusive Communities - Redressing inequalities and involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	+	Rural Centre
		Sub-Indicator: Distance to centre	-	970m ACF to Fulbourn High Street
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	0	No facilities lost, and no new facilities proposed directly as a result of the development.
		Will improve relations between people from different backgrounds or social groups?		
		Will it redress inequalities?		
	Encourage and enable the active involvement of local people in community activities	Will it increase the ability of people to influence decisions, including 'hard to reach' groups?		
		Will it encourage engagement with community activities?	0	No facilities lost, and no new facilities proposed directly as a result of the development.

Economic Activity		Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	0	Development would have no effect on employment land or premises.
	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	Development would have no effect on vitality or viability of existing centres. The indicator is likely to apply particularly to sites which include retail, offices, or leisure uses.
		Will it encourage the rural economy and diversification, and support sustainable tourism?		
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it contribute to providing a range of employment opportunities, in accessible locations?	+	22.66 minutes from site to nearest employment area with 2000+ employees. 4 employment areas with 2000+ employees that can be accessed in less than 30mins - 1.6km walk.
		Will it improve the level of investment in key community services and infrastructure, including broadband?	-	Major utilities Infrastructure improvements required, but constraints can be addressed. The electricity, mains water, gas and sewerage systems will need reinforcement to increase capacity.
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve access to education and training, and support provision of skilled employees to the economy?	-	School capacity not sufficient, but significant issues can be adequately addressed

Transport	Reduce the need to travel and promote more sustainable transport choices.	Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	+ / 0	Total Score 15 / 12
		Sub-indicator: Distance to bus stop / rail station	+++ / 0	223m ACF from the centre of the site to the nearest bus stop with Citi 1 service (Fulbourn, Teversham Road) FROM CAMBRIDGE. 755m ACF from the centre of the site to the nearest bus stop with Citi 1 service (Fulbourn, Windmill Lane) TO CAMBRIDGE.
		Sub-indicator: Frequency of Public Transport	0	Citi 1 - 30 Minute Service
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	-	47 Minutes from to Cambridge (Fulbourn, Windmill Lane to Cambridge, St Andrews Street)
		Sub-indicator: Distance for cycling to City Centre or Market Town	+	6.44km ACF to Cambridge Market
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	0	No capacity constraints identified, safe access can be achieved.
		Will it make the transport network safer for and promote use of non-motorised modes?	0	No impact

Site No. Site 336
Address Impington, Land off Lone Tree Avenue
Location Impington
Category of site Rural Centre
Site area 1.37

Theme	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	0	No previously developed land.
		Will it use land efficiently?		
		Will it protect and enhance the best and most versatile agricultural land?	-	Minor loss of best and most versatile agricultural land (Grades 1 and 2) - small site but all Grade 2.
		Will it avoid the sterilisation of economic mineral reserves? Will it minimise the degradation/loss of soils due to new development?	0	Small part of the site within an area designated in the Minerals and Waste LDF but development would not have a negative impact.
	Minimise waste production and support the reuse and recycling of waste products	Will it encourage reduction in household waste, and increase waste recovery and recycling?		
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	-	Site lies near source of air pollution, or development could impact on air quality, with minor negative impacts incapable of mitigation. Close to an AQMA on A14.
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	-	Will create minor negative impacts to, or as a result of, the development, with minor negative impacts incapable of mitigation. Significant potential for traffic noise from A14. Some minor to moderate additional off-site road traffic noise generation on existing residential due to development related car movements but dependent on location of site entrance
		Will it minimise, and where possible address, land contamination?	+	Historical agricultural, industrial / commercial uses on site and adjacent to disused railway line. Potential for minor benefits through remediation of minor contamination.
		Will it protect and where possible enhance the quality of the water environment?	0	Development unlikely to affect water quality. Assumptions for a neutral impact are that appropriate standards and pollution control measures will be achieved through the development process, e.g. as part of Sustainable Drainage Systems (Suds).
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiversity?	0	No impact on protected sites and species (or impacts could be mitigated).
	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	0	Assumptions for a neutral impact are that existing features that warrant retention can be retained or appropriate mitigation will be achieved through the development process.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process.

Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	-	Minor Negative Impact (Development conflicts with landscape character, minor negative impacts incapable of mitigation) - adverse effect on the landscape and townscape setting of Impington. It would impact on the purposes and functions of the Green Belt in an area with wide views across to Cambridge.
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	-	Minor Negative Impact (development conflicts with townscape character, minor negative impacts incapable of mitigation) - backland development that does not relate well to street-scene.
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Archaeological potential will require further information but the assumption for a neutral impact is that it is likely appropriate mitigation can be achieved through the development process.
	Create places, spaces and buildings that work well, wear well and look good	Will it lead to developments built to a high standard of design and good place making that reflects local character?		
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	0	Standard requirements for renewables would apply.
		Will it promote energy efficiency?		
		Will it minimise contributions to climate change through sustainable construction practices?		
	Reduce vulnerability to future climate change effects	Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	0	Flood Zone 1 and no drainage issues that cannot be appropriately addressed.
		Will it minimise the likely impacts of climate change on the development through appropriate design?		
		Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?		
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?		
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?		

Inclusive Communities - Housing	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	0	Neutral impact (existing features retained or appropriate mitigation). Assumption is standard requirements for open space would apply.
	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?		
		Will it provide for housing for the ageing population?		
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	No effect on pitch or plot provision.
Inclusive Communities - Redressing inequalities and involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	+	Rural Centre
		Sub-Indicator: Distance to centre	---	1,700m ACF to Cambridge Road (Village Hall), Girton
		Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	0	No facilities lost, and no new facilities proposed directly as a result of the development.
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will improve relations between people from different backgrounds or social groups?		
		Will it redress inequalities?		
		Will it increase the ability of people to influence decisions, including 'hard to reach' groups?		
	Encourage and enable the active involvement of local people in community activities	Will it encourage engagement with community activities?	0	No facilities lost, and no new facilities proposed directly as a result of the development.

Economic Activity		Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	0	Development would have no effect on employment land or premises.
	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	Development would have no effect on vitality or viability of existing centres. The indicator is likely to apply particularly to sites which include retail, offices, or leisure uses.
		Will it encourage the rural economy and diversification, and support sustainable tourism?		
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it contribute to providing a range of employment opportunities, in accessible locations?	+++	Near to employment area with 2000+ employees. 8 employment areas with 2000+ employees that can be accessed in less than 30mins - 1.6km walk.
		Will it improve the level of investment in key community services and infrastructure, including broadband?	+	Minor Utilities Infrastructure improvements required, but constraints can be addressed. There is insufficient spare mains water capacity within the distribution zone to supply the number of proposed properties which could arise if all the SHLAA sites within the zone were to be developed. The WWTW is operating close to capacity and the sewerage network is at capacity and both will require mitigation.
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve access to education and training, and support provision of skilled employees to the economy?	+	Insufficient spare school capacity but potential for improvement to meet needs

Transport	Reduce the need to travel and promote more sustainable transport choices.	Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	+++	Total Score 22
		Sub-indicator: Distance to bus stop / rail station	+++	242m ACF from the centre of the site to the nearest bus stop (Impington, Highfield Road)
		Sub-indicator: Frequency of Public Transport	+	Citi 8 service - 20 minute service.
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	+++	16 minutes from bus stop to the centre of Cambridge (Impington, Highfield Road to Cambridge, Emmanuel Street).
		Sub-indicator: Distance for cycling to City Centre or Market Town	+++	3.59km ACF to Cambridge Market
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	- / 0	The proposed site does not appear to have a direct link to the adopted public highway. The promoter suggests access to the site would be taken off Lone Tree Avenue where there is an entrance into the site constructed to the boundary.
		Will it make the transport network safer for and promote use of non-motorised modes?	0	No impact.

Site No. Site 337
Address Waterbeach, Land adjacent to Bannold Road
Location Waterbeach
Category of site Minor Rural Centre
Site area 6.21

Theme	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	0	No previously developed land.
		Will it use land efficiently?		
		Will it protect and enhance the best and most versatile agricultural land?	0	Development would not affect best and most versatile agricultural land (Grades 1 and 2). Very small part of the site Grade 2.
		Will it avoid the sterilisation of economic mineral reserves? Will it minimise the degradation/loss of soils due to new development?	0	Small part of the site within an area designated in the Minerals and Waste LDF but development would not have a negative impact.
	Minimise waste production and support the reuse and recycling of waste products	Will it encourage reduction in household waste, and increase waste recovery and recycling?		
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	0	Development unlikely to impact on air quality. Site lies in an area where air quality acceptable.
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	-	Development compatible with neighbouring uses. Some minor to moderate additional road traffic noise generation impact on existing residential due to development related car movements but dependent on location of site entrance.
		Will it minimise, and where possible address, land contamination?	0	Development not on land likely to be contaminated.
		Will it protect and where possible enhance the quality of the water environment?	0	Development unlikely to affect water quality. Assumptions for a neutral impact are that appropriate standards and pollution control measures will be achieved through the development process, e.g. as part of Sustainable Drainage Systems (Suds).
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiversity?	0	No impact on protected sites and species (or impacts could be mitigated).
	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	0	Assumptions for a neutral impact are that existing features that warrant retention can be retained or appropriate mitigation will be achieved through the development process.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process.

Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	-	Minor Negative Impact (Development conflicts with landscape character, minor negative impacts incapable of mitigation) - The site is located in a relatively open area separating the village from the Barracks to the north. It is in agricultural use. Bannold Road has sporadic development along the northern side and this, together with the open land, creates a rural character and the appearance of the countryside entering the village. If this site were developed it would intrude into the rural separation area between Waterbeach and the Barracks.
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	-	Minor Negative Impact (development conflicts with townscape character, minor negative impacts incapable of mitigation) - If this site were developed it would intrude into the rural separation area between Waterbeach and the Barracks.
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Archaeological potential will require further information but the assumption for a neutral impact is that it is likely appropriate mitigation can be achieved through the development process
		Create places, spaces and buildings that work well, wear well and look good		
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	0	Standard requirements for renewables would apply.
		Will it promote energy efficiency?		
		Will it minimise contributions to climate change through sustainable construction practices?		
	Reduce vulnerability to future climate change effects	Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	0	Flood Zone 1 and no drainage issues that cannot be appropriately addressed.
		Will it minimise the likely impacts of climate change on the development through appropriate design?		
	Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?			
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?		
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?		

Inclusive Communities - Housing	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	0	Neutral impact (existing features retained or appropriate mitigation). Assumption is standard requirements for open space would apply.
	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?		
		Will it provide for housing for the ageing population?		
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	No effect on pitch or plot provision.
Inclusive Communities - Redressing inequalities and involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)		
		Sub-Indicator: Distance to centre	0	790m ACF to Chapel Street, Waterbeach
	Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)		0	No facilities lost, and no new facilities proposed directly as a result of the development.
		Will improve relations between people from different backgrounds or social groups?		
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will it redress inequalities?		
		Will it increase the ability of people to influence decisions, including 'hard to reach' groups?		
Encourage and enable the active involvement of local people in community activities	Will it encourage engagement with community activities?	0	No facilities lost, and no new facilities proposed directly as a result of the development.	

Economic Activity		Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	0	Development would have no effect on employment land or premises.
	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	Development would have no effect on vitality or viability of existing centres. The indicator is likely to apply particularly to sites which include retail, offices, or leisure uses.
		Will it encourage the rural economy and diversification, and support sustainable tourism?		
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it contribute to providing a range of employment opportunities, in accessible locations?	+	23.35 minutes from site to nearest employment area with 2000+ employees. 6 employment areas with 2000+ employees that can be accessed in less than 30mins - 1.6km walk.
		Will it improve the level of investment in key community services and infrastructure, including broadband?	+	Minor Utilities Infrastructure improvements required, but constraints can be addressed. There is insufficient spare mains water capacity within the distribution zone to supply the number of proposed properties which could arise if all the SHLAA sites within the zone were to be developed. The WWTW is operating close to capacity and the sewerage network is at capacity and both will require mitigation.
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve access to education and training, and support provision of skilled employees to the economy?	-	School capacity not sufficient, but significant issues can be adequately addressed

Transport	Reduce the need to travel and promote more sustainable transport choices.	Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	+	Total Score 16
		Sub-indicator: Distance to bus stop / rail station	+++	155m ACF from the centre of the site to the nearest bus stop (Waterbeach, Kirby Terrace)
		Sub-indicator: Frequency of Public Transport	-	9 service - Hourly service.
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	+	28 Minutes from Waterbeach to Cambridge (Waterbeach, Kirby Terrace to Cambridge, Drummer Street).
		Sub-indicator: Distance for cycling to City Centre or Market Town	+	9.10km ACF to Cambridge Market
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	0	No capacity constraints identified, safe access can be achieved.
		Will it make the transport network safer for and promote use of non-motorised modes?	+	The Highway Authority will require new development to provide or contribute to the provision of infrastructure to encourage more sustainable transport links both on and off site. Provision or contribution from this site would result in minor improvement to public transport, walking or cycling facilities.

Site No. Site 338
Address Waterbeach, Bannold Road
Location Waterbeach
Category of site Minor Rural Centre
Site area 1.42

Theme	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	0	No previously developed land.
		Will it use land efficiently?		
		Will it protect and enhance the best and most versatile agricultural land?	0	Development would not affect best and most versatile agricultural land (Grades 1 and 2). Very small part of the site Grade 2.
		Will it avoid the sterilisation of economic mineral reserves? Will it minimise the degradation/loss of soils due to new development?	0	Site not within an area designated in the Minerals and Waste LDF.
	Minimise waste production and support the reuse and recycling of waste products	Will it encourage reduction in household waste, and increase waste recovery and recycling?		
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	0	Development unlikely to impact on air quality. Site lies in an area where air quality acceptable.
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	-	Development compatible with neighbouring uses. Some minor to moderate additional road traffic noise generation impact on existing residential due to development related car movements but dependent on location of site entrance.
		Will it minimise, and where possible address, land contamination?	0	Development not on land likely to be contaminated.
		Will it protect and where possible enhance the quality of the water environment?	0	Development unlikely to affect water quality. Assumptions for a neutral impact are that appropriate standards and pollution control measures will be achieved through the development process, e.g. as part of Sustainable Drainage Systems (Suds).
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiversity?	0	No impact on protected sites and species (or impacts could be mitigated).
	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	0	Assumptions for a neutral impact are that existing features that warrant retention can be retained or appropriate mitigation will be achieved through the development process.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process.

Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	-	Minor Negative Impact (Development conflicts with landscape character, minor negative impacts incapable of mitigation) - The site is located in a relatively open area separating the village from the Barracks to the north. It is in agricultural use. Bannold Road has sporadic development along the northern side and this, together with the open land, creates a rural character and the appearance of the countryside entering the village. If this site were developed it would intrude into the rural separation area between Waterbeach and the Barracks.
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	-	Minor Negative Impact (development conflicts with townscape character, minor negative impacts incapable of mitigation) - If this site were developed it would intrude into the rural separation area between Waterbeach and the Barracks.
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Archaeological potential will require further information but the assumption for a neutral impact is that it is likely appropriate mitigation can be achieved through the development process
		Create places, spaces and buildings that work well, wear well and look good		
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	0	Standard requirements for renewables would apply.
		Will it promote energy efficiency?		
		Will it minimise contributions to climate change through sustainable construction practices?		
	Reduce vulnerability to future climate change effects	Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	0	Flood Zone 1 and no drainage issues that cannot be appropriately addressed.
		Will it minimise the likely impacts of climate change on the development through appropriate design?		
	Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?			
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?		
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?		

Inclusive Communities - Housing	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	0	Neutral impact (existing features retained or appropriate mitigation). Assumption is standard requirements for open space would apply.
	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?		
		Will it provide for housing for the ageing population?		
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	No effect on pitch or plot provision.
Inclusive Communities - Redressing Inequalities and involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)		
		Sub-Indicator: Distance to centre	0	730m ACF to Chapel Street, Waterbeach
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	0	No facilities lost, and no new facilities proposed directly as a result of the development.
		Will improve relations between people from different backgrounds or social groups?		
	Encourage and enable the active involvement of local people in community activities	Will it redress inequalities?		
		Will it increase the ability of people to influence decisions, including 'hard to reach' groups?		
	Will it encourage engagement with community activities?	0	No facilities lost, and no new facilities proposed directly as a result of the development.	

Economic Activity		Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	0	Development would have no effect on employment land or premises.
	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	Development would have no effect on vitality or viability of existing centres. The indicator is likely to apply particularly to sites which include retail, offices, or leisure uses.
		Will it encourage the rural economy and diversification, and support sustainable tourism?		
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it contribute to providing a range of employment opportunities, in accessible locations?	+	23.35 minutes from site to nearest employment area with 2000+ employees. 6 employment areas with 2000+ employees that can be accessed in less than 30mins - 1.6km walk.
		Will it improve the level of investment in key community services and infrastructure, including broadband?	+	Minor Utilities Infrastructure improvements required, but constraints can be addressed. There is insufficient spare mains water capacity within the distribution zone to supply the number of proposed properties which could arise if all the SHLAA sites within the zone were to be developed. The WWTW is operating close to capacity and the sewerage network is at capacity and both will require mitigation.
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve access to education and training, and support provision of skilled employees to the economy?	-	School capacity not sufficient, but significant issues can be adequately addressed

Transport	Reduce the need to travel and promote more sustainable transport choices.	Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	+	Total Score 16
		Sub-indicator: Distance to bus stop / rail station	+++	84m ACF from the centre of the site to the nearest bus stop (Waterbeach, Surgery)
		Sub-indicator: Frequency of Public Transport	-	9 service - Hourly service.
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	+	27 Minutes from Waterbeach to Cambridge (Waterbeach, Kirby Terrace to Cambridge, Drummer Street).
		Sub-indicator: Distance for cycling to City Centre or Market Town	+	9.04km ACF to Cambridge Market
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	0	No capacity constraints identified, safe access can be achieved.
		Will it make the transport network safer for and promote use of non-motorised modes?	+	The Highway Authority will require new development to provide or contribute to the provision of infrastructure to encourage more sustainable transport links both on and off site. Provision or contribution from this site would result in minor improvement to public transport, walking or cycling facilities.

Site No. Site 339
Address Fen Ditton, High Ditch Road
Location Fen Ditton
Category of site Group Village
Site area 2.29

Theme	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	0	The site includes one residential property.
		Will it use land efficiently?		
		Will it protect and enhance the best and most versatile agricultural land?	0	Development would not affect best and most versatile agricultural land (Grades 1 and 2).
		Will it avoid the sterilisation of economic mineral reserves? Will it minimise the degradation/loss of soils due to new development?	0	Site not within an area designated in the Minerals and Waste LDF.
	Minimise waste production and support the reuse and recycling of waste products	Will it encourage reduction in household waste, and increase waste recovery and recycling?		
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	0	Development unlikely to impact on air quality. Site lies in an area where air quality acceptable.
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	0	Development compatible with neighbouring uses.
		Will it minimise, and where possible address, land contamination?	0	Development not on land likely to be contaminated.
		Will it protect and where possible enhance the quality of the water environment?	0	Development unlikely to affect water quality. Assumptions for a neutral impact are that appropriate standards and pollution control measures will be achieved through the development process, e.g. as part of Sustainable Drainage Systems (Suds).
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiversity?	0	No impact on protected sites and species (or impacts could be mitigated).
	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	0	Assumptions for a neutral impact are that existing features that warrant retention can be retained or appropriate mitigation will be achieved through the development process.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process. A footpath runs across the site.

Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	---	Significant Negative Impact (Development conflicts with landscape character, with significant negative impacts incapable of mitigation) - Significant historic environment, townscape and landscape impacts on this historically sensitive part of the village. Development would have a detrimental impact on the setting of several Grade II Listed Buildings and the Conservation Area, which it would be possible to mitigate.
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	---	Significant Negative Impact (Development conflicts with townscape character, with significant negative impacts incapable of mitigation) - Significant historic environment, townscape and landscape impacts on this historically sensitive part of the village. Development would have a detrimental impact on the setting of several Grade II Listed Buildings and the Conservation Area, which it would be possible to mitigate.
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	-	Minor Negative Impact on historic Assets (incapable of satisfactory mitigation) – Significant historic environment, townscape and landscape impacts on this historically sensitive part of the village. Development would have a detrimental impact on the setting of several Grade II Listed Buildings and the Conservation Area, which it would be possible to mitigate.
	Create places, spaces and buildings that work well, wear well and look good	Will it lead to developments built to a high standard of design and good place making that reflects local character?		
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	0	Standard requirements for renewables would apply.
		Will it promote energy efficiency?		
		Will it minimise contributions to climate change through sustainable construction practices?		
	Reduce vulnerability to future climate change effects	Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	0	Flood Zone 1 and no drainage issues that cannot be appropriately addressed.
		Will it minimise the likely impacts of climate change on the development through appropriate design?		
Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?				
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?		
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?		

Inclusive Communities - Housing	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	0	Neutral impact (existing features retained or appropriate mitigation). Assumption is standard requirements for open space would apply.
	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?		
		Will it provide for housing for the ageing population?		
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	No effect on pitch or plot provision.
Inclusive Communities - Redressing inequalities and involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)		
		Sub-Indicator: Distance to centre	+	520m ACF to Fen Ditton High Street
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	0	No facilities lost, and no new facilities proposed directly as a result of the development.
		Will improve relations between people from different backgrounds or social groups?		
		Will it redress inequalities?		
	Encourage and enable the active involvement of local people in community activities	Will it increase the ability of people to influence decisions, including 'hard to reach' groups?		
		Will it encourage engagement with community activities?	0	No facilities lost, and no new facilities proposed directly as a result of the development.

Economic Activity		Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	0	Development would have no effect on employment land or premises.
	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	Development would have no effect on vitality or viability of existing centres. The indicator is likely to apply particularly to sites which include retail, offices, or leisure uses.
		Will it encourage the rural economy and diversification, and support sustainable tourism?		
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it contribute to providing a range of employment opportunities, in accessible locations?	+++	11.05 minutes from site to nearest employment area with 2000+ employees. 4 employment areas with 2000+ employees that can be accessed in less than 30mins - 1.6km walk.
		Will it improve the level of investment in key community services and infrastructure, including broadband?	+	Minor Utilities Infrastructure improvements required, but constraints can be addressed. There is insufficient spare mains water capacity within the distribution zone to supply the number of proposed properties which could arise if all the SHLAA sites within the zone were to be developed. The WWTW is operating close to capacity and the sewerage network is at capacity and both will require mitigation.
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve access to education and training, and support provision of skilled employees to the economy?	+	Insufficient spare school capacity but potential for improvement to meet needs.

Transport	Reduce the need to travel and promote more sustainable transport choices.	Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	0	Total Score 14
		Sub-indicator: Distance to bus stop / rail station	+	405m ACF from the centre of the site to the nearest bus stop (Fen Ditton, Blue Lion)
		Sub-indicator: Frequency of Public Transport	---	196 - Less than hourly service
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	+	27 Minutes from Fen Ditton to Cambridge (Fen Ditton, Blue Lion to Cambridge, Drummer Street).
		Sub-indicator: Distance for cycling to City Centre or Market Town	+++	4.26km ACF to Cambridge Market
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	0	No capacity constraints identified, safe access can be achieved.
		Will it make the transport network safer for and promote use of non-motorised modes?	0	No impact.

Site No. Site 231 (revised site boundary as included in draft Local Plan)
Address Land north of Waterbeach
Location Waterbeach
Category of site New Settlement
Site area 407.3

Theme	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	+++	25% to 74% Previously Developed Land (PDL). Military barracks and airfield.
		Will it use land efficiently?		
		Will it protect and enhance the best and most versatile agricultural land?	---	Significant loss (20 hectares or more) of best and most versatile agricultural land (Grades 1 and 2) - majority of site is classified as Grade 2, with some Grade 3. Airfield is unclassified.
		Will it avoid the sterilisation of economic mineral reserves? Will it minimise the degradation/loss of soils due to new development?	-	Site falls within a designated area in the Minerals and Waste LDF, development would have minor negative impacts on identified Minerals Reserves.
	Minimise waste production and support the reuse and recycling of waste products	Will it encourage reduction in household waste, and increase waste recovery and recycling?		
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	-	Development could impact on air quality, with minor negative impacts incapable of mitigation. Despite this proposal not being adjacent to an Air Quality Management Area, it is of a significant size and therefore, there is a potential for an increase in traffic and static emissions that could affect local air quality. More information is required for this location, particularly details for air quality assessment and a low emission strategy.
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	0	Development compatible with neighbouring uses. Some potential for traffic noise from A10 and railway, but should be possible to mitigate. Small part of the site is within a WWTW safeguarding Area of the Cambridgeshire & Peterborough Minerals and Waste LDF. Core Strategy policy CS31 establishes a presumption against allowing development that would be occupied by people because of the impact on amenity caused by offensive odours from the site. Where new development is proposed it must be accompanied by an odour assessment report. Development could expose residents to offensive odours with significant negative impacts incapable of adequate mitigation. Developers propose to move the WWTW off site which would mitigate this impact.
		Will it minimise, and where possible address, land contamination?	+	Potential for minor benefits through remediation of minor contamination, the site has a number of potential sources of contamination- previous military land, areas of filled ground, a sewerage works and also adjacent to railway line and landfill.
		Will it protect and where possible enhance the quality of the water environment?	0	Development unlikely to affect water quality. Assumptions for a neutral impact are that appropriate standards and pollution control measures will be achieved through the development process and will mitigate any impact on groundwater.

Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiversity?	0	No impact on protected sites and species (or impacts could be mitigated).
	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	+++	Assumptions for a significant positive impact are that opportunities for enhancement and new features will be achieved and that risks of negative impact (loss of existing features) will be satisfactorily mitigated, opportunities include new woodland, hedgerows, grassland, watercourses and ponds. Northern part of the site, proposed to remain free from development, will provide major opportunities for mitigation.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	+++	Development would deliver significant new Green Infrastructure. The northern part of the site area can deliver new public open space and a significant landscaped setting for Denny Abbey.
Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	-	Minor Negative Impact (Development conflicts with landscape character, with minor negative impacts incapable of mitigation). The scale and character of the proposed development would be visible over large areas, and the likely scale and type of buildings would form developed skylines to the north, south and east. Folds and slopes within the landform of the development site would mean a high inter-visibility between sections of the development and reinforce its dominance in the landscape when viewed from outside the site. Development would be large in relation to the existing settlements and of such a different character that it would have an adverse effect on them. Significant mitigation measures are proposed, in particular utilising the northern part of the site to reduce wider landscape impacts, including on Denney Abbey. Reducing the built area of the development, and the density, will enable additional tree planting and boundary treatment, and reduce building heights.
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	0	Neutral impact (generally compatible, or capable of being made compatible with local townscape character). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process.
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	-	Minor Negative Impact on historic Assets (incapable of satisfactory mitigation) - 4 Listed Buildings on site, and numerous Bronze Age barrows known in the area, a significant number of which are designated Scheduled Monuments . Archaeological potential will require further information but the assumption for a neutral impact is that it is likely appropriate mitigation can be achieved through the development process. Impacts on Denny Abbey can be mitigated through setting back the built form away from Denny Abbey, significant landscaping and boundary treatments, and controls over building heights.
	Create places, spaces and buildings that work well, wear well and look good	Will it lead to developments built to a high standard of design and good place making that reflects local character?		

Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	+++	Development would create major additional opportunities for renewable energy based upon potential for combined heat and power.
		Will it promote energy efficiency?		
		Will it minimise contributions to climate change through sustainable construction practices?		
	Reduce vulnerability to future climate change effects	Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	0	Great majority of site within Flood Zone 1 and no drainage issues that cannot be appropriately addressed.
		Will it minimise the likely impacts of climate change on the development through appropriate design?		
		Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?		
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?		
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?		

Inclusive Communities - Housing	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	+++	Development would deliver significant new public open space.
	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?		
		Will it provide for housing for the ageing population?		
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	No effect on pitch or plot provision.
Inclusive Communities - Redressing inequalities and involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	+++/+	New Settlement. New settlement proposal to include substantial retail, health, community and leisure facilities.
		Sub-Indicator: Distance to centre	0	Centre point of site beyond 1000m of nearest existing centre Majority of site would be within 800m of any new local centre developed as part of site.
		Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	+++	New local facilities or improved existing facilities are proposed of significant benefit. Proposal to include new secondary and primary schools, a large medical centre, retail, leisure and sports facilities
		Will improve relations between people from different backgrounds or social groups?		
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will it redress inequalities?		
		Will it increase the ability of people to influence decisions, including 'hard to reach' groups?		
Encourage and enable the active involvement of local people in community activities	Will it encourage engagement with community activities?	+++	New local community / village hall or improved existing facility is proposed of significant benefit (and is viable and sustainable). Submission states that a number of community centres will be provided to include halls, libraries and places of faith	

Economic Activity		Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	+++	Development would significantly enhance employment opportunities. Much of the new employment provision would take place beyond 2031.
	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	Development would have no effect on vitality or viability of existing centres. The assumption is that the town and local centre proposals will only be of a suitable scale to serve needs of new residents and will not impact on other centres.
		Will it encourage the rural economy and diversification, and support sustainable tourism?		
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it contribute to providing a range of employment opportunities, in accessible locations?	0 / +++	Currently the site is 41.03 minutes from site to nearest employment area with 2000+ employees. No employment areas with 2000+ employees that can be accessed in less than 30mins - 1.6km walk. However, in the longer term the new town would include significant employment provision onsite, and improved public transport links to major employment areas on the northern fringe of Cambridge. Therefore in the longer term, a new settlement would have a significant positive impact against this indicator.
		Will it improve the level of investment in key community services and infrastructure, including broadband?	-	Major utilities Infrastructure improvements required, but constraints can be addressed. The electricity, mains water, gas and sewerage systems will need reinforcement to increase capacity.
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve access to education and training, and support provision of skilled employees to the economy?	-	School capacity not sufficient, but significant issues can be adequately addressed by the construction of new secondary and primary schools.

Transport	Reduce the need to travel and promote more sustainable transport choices.	Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	+	Total score of 15.
		Sub-indicator: Distance to bus stop / rail station	0	New settlement would require new bus stops which would mostly fall within 800m of the site. 1,087m ACF from the centre of the site to the nearest bus stop - Research Park Entrance (9 service).
		Sub-indicator: Frequency of Public Transport	+ / ?	New settlement would have at least a 20 minute bus service to Cambridge, equivalent to Cambourne Citi 4. Could be better services in the longer term. Currently 9 service - hourly service.
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	+ / ?	Future journey time could be affected by transport improvements, particularly if segregated bus links were introduced. Currently 9 service - 28 minutes to Ely (Landbeach, Research Park Entrance to Ely, Market Street). 9 service - 27 minutes to Cambridge (Landbeach, Research Park Entrance to Cambridge, Drummer Street Bus Station).
		Sub-indicator: Distance for cycling to City Centre or Market Town	+	9.68km ACF from the centre of the site to Cambridge Market.
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	---	Insufficient capacity on existing roads. The extent of necessary mitigation measures relating to highway capacity and access arrangements will need to be determined through transport modelling and a detailed transport assessment. They could include dualling of the A10 between Waterbeach and the A14 and upgrading of the A10 and A14 junction. Development proposals of this scale will need to be backed by a Transport Assessment and supporting Travel Plans. Any Transport Assessment will need to be based on analysis undertaken using the Cambridge Sub-Region Model. Detailed mitigation measures and the identification of appropriate financial contributions and obligations under Section 106 will be identified based on the appraisal of the Transport Assessment for each site.
		Will it make the transport network safer for and promote use of non-motorised modes?	+++	Would potentially result in significant improvement to public transport, walking or cycling facilities. Promoter proposes new train station on the Ely to Cambridge railway line. Also propose a rapid bus service alongside the A10 – potential to link into CGB at Science Park. Opportunities to link to existing walking and cycle routes (such as NCN11) into Cambridge and other key sites such as Science Park. Potential requirement to enhance Park and Ride site on A10 at Milton to provide greater capacity. Opportunity to strengthen bus services on corridor between Waterbeach and Cambridge by a rapid service alongside the A10.

Site No. Site 238 (revised proposal as included in draft Local Plan)
Address Bourn Airfield, Bourn
Location countryside
Category of site New Settlement
Site area 141.7 plus additional allocation of adjoining TKA Tallent site for employment use

Theme	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	+	25% to 74% Previously Developed Land (PDL). Military barracks and airfield.
		Will it use land efficiently?		
		Will it protect and enhance the best and most versatile agricultural land?	---	Significant loss (20 hectares or more) of best and most versatile agricultural land (Grades 1 and 2) - Majority of very large site is Grade 2.
		Will it avoid the sterilisation of economic mineral reserves? Will it minimise the degradation/loss of soils due to new development?	0	Site not within an area designated in the Minerals and Waste LDF.
	Minimise waste production and support the reuse and recycling of waste products	Will it encourage reduction in household waste, and increase waste recovery and recycling?		
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	-	Development could impact on air quality, with minor negative impacts incapable of mitigation. Despite this proposal not being adjacent to an Air Quality Management Area, it is of a significant size and therefore, there is a potential for an increase in traffic and static emissions that could affect local air quality. More information is required for this location, particularly details for air quality assessment and a low emission strategy.
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	-	Impact of noise from A428 which adjoins northern boundary of site needs to be mitigated. Some minor to moderate additional road traffic noise generation impact on existing residential due to development related car movements could be mitigated. Existing issues with neighbouring industrial units would need to be addressed. Revision: Plan proposes allocation of adjoining uses to achieve more compatible form of development.
		Will it minimise, and where possible address, land contamination?	+	This site is previously military land/airfield and may have contaminated land. It will require investigation. Potential for minor benefits through remediation of minor contamination.
		Will it protect and where possible enhance the quality of the water environment?	0	Assumptions for a neutral impact are that appropriate standards and pollution control measures will be achieved through the development process, e.g. as part of Sustainable Drainage Systems (Suds).
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiversity?	0	No impact on protected sites and species (or impacts could be mitigated).
	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	0	Assumptions for a neutral impact are that existing features that warrant retention can be retained or appropriate mitigation will be achieved through the development process. Greatest impact likely to be as a result of losing grassland habitats currently found within the airfield strips. Great crested newts are known to be in the vicinity and may also be adversely affected.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	+	Opportunities to deliver green infrastructure through design of new settlement. Revision: The area action plan area identified on the draft proposals map includes a larger area than the site proposed to accommodate the village.

Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	0	Neutral impact (generally compatible, or capable of being made compatible with local landscape character). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process.
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	0	Neutral impact (generally compatible, or capable of being made compatible with local townscape character). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process.
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	0/-	Neutral impact (existing features retained, or appropriate mitigation possible). Setting of listed buildings to west and south west of site would be adversely affected by development. Archaeological potential will require further information but the assumption for a neutral impact is that it is likely appropriate mitigation can be achieved through the development process.
	Create places, spaces and buildings that work well, wear well and look good	Will it lead to developments built to a high standard of design and good place making that reflects local character?		
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	+ /+++	Development would create minor additional opportunities for renewable energy. A new settlement of this scale would be expected to include many additional renewable energy options
		Will it promote energy efficiency?		
		Will it minimise contributions to climate change through sustainable construction practices?		
	Reduce vulnerability to future climate change effects	Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	0	Flood Zone 1 and no drainage issues that cannot be appropriately addressed.
		Will it minimise the likely impacts of climate change on the development through appropriate design?		
		Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?		
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?		
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?		

Inclusive Communities - Housing	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	+	Development would create opportunities for new public open space, including through delivery of green infrastructure. Could be significant in extent.
	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?		
		Will it provide for housing for the ageing population?		
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	No effect on pitch or plot provision.
Inclusive Communities - Redressing inequalities and involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	+	New settlement. Would be expected to provide additional local facilities and services for existing and new communities.
		Sub-Indicator: Distance to centre	0	Centre point of site beyond 1000m of nearest existing centre Majority of site would be within 800m of any new local centre developed as part of site.
		Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	+++ / +	New facilities or improved existing facilities would be required to meet the needs generated by the community. Promoter has indicated that the settlement will be a mixed use sustainable community. Revision: Could be potentially significant.
		Will improve relations between people from different backgrounds or social groups?		
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will it redress inequalities?		
		Will it increase the ability of people to influence decisions, including 'hard to reach' groups?		
Encourage and enable the active involvement of local people in community activities	Will it encourage engagement with community activities?	+++	New facilities required to meet needs generated.	

Economic Activity		Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	+++	It is proposed that the new settlement be a mixed use community therefore this would mitigate the loss of employment as a result of developing the airfield site. Revision: In addition the adjoining industrial site is proposed to be redeveloped with employment uses compatible with the adjoining site would enable the new village to include a significant element of employment.
	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	Development would have no effect on vitality or viability of existing centres. The new settlement is proposed as being a self sufficient sustainable community.
		Will it encourage the rural economy and diversification, and support sustainable tourism?		
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it contribute to providing a range of employment opportunities, in accessible locations?	+ / +++	32.76 minutes from site to nearest employment area with 2000+ employees. No employment areas with 2000+ employees that can be accessed in less than 30mins - 1.6km walk. Proposed - Site would develop business / employment as part of development. Therefore it is assumed that employments areas of 2000+ will be a accessed between 15 and 30 minutes (could be less than 15 minutes +++ towards end of development).
		Will it improve the level of investment in key community services and infrastructure, including broadband?	-	Major utilities Infrastructure improvements required, but constraints can be addressed. There is insufficient spare mains water capacity within the distribution zone to supply the number of proposed properties which could arise if all the SHLAA sites within the zone were to be developed. The sewage network is at capacity.
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve access to education and training, and support provision of skilled employees to the economy?	-	School capacity not sufficient, but significant issues be adequately addressed

Transport	Reduce the need to travel and promote more sustainable transport choices.	Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	0	Total score of 13.
		Sub-indicator: Distance to bus stop / rail station	0	New settlement would require new bus stops which would mostly fall within 800m of the site. 820m ACF from the centre of the site to nearest bus stop (Citi 4).
		Sub-indicator: Frequency of Public Transport	+	New settlement would have at least a 20 minute bus service to Cambridge, equivalent to Cambourne Citi 4. 20 minute service. In combination with Cambourne west there is scope for improvements on the bus corridor to Cambridge to mitigate key constraints.
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	0	~33 minutes from bus stop to Cambridge. Potential improvements such as bus lanes could impact on journey time.
		Sub-indicator: Distance for cycling to City Centre or Market Town	0	10.81km ACF from the centre of the site to Cambridge Market.
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	0/-	No capacity constraints identified, safe access can be achieved. Highway Authority has highlighted A1303 Madingley Road corridor into Cambridge has capacity problems (especially at M11 Junction 13). Also Park and Ride at Madingley Road capacity may need upgrading.
		Will it make the transport network safer for and promote use of non-motorised modes?	+++	The Highway Authority will require new development to provide or contribute to the provision of infrastructure to encourage more sustainable transport links both on and off site. Revision: Provision or contribution from this site would result in significant improvement to public transport, walking or cycling facilities, as detailed in the draft policy.

Site No. Site 239 (revised site boundary as included in draft Local Plan)
Address Land west of Lower Cambourne and the Cambourne Business Park, bounded to the north by the A428 and to the west by the A1198 (Swansley Wood)
Location Cambourne
Category of site Rural Centre
Site area 90.2 ha

Theme	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	0	No previously developed land.
		Will it use land efficiently?		
		Will it protect and enhance the best and most versatile agricultural land?	---	Significant loss (20 hectares or more) of best and most versatile agricultural land (Grades 1 and 2) - the whole site is Grade 2 (over 77 ha).
		Will it avoid the sterilisation of economic mineral reserves? Will it minimise the degradation/loss of soils due to new development?	0	Site not within an area designated in the Minerals and Waste LDF.
	Minimise waste production and support the reuse and recycling of waste products	Will it encourage reduction in household waste, and increase waste recovery and recycling?		
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	0	Development unlikely to impact on air quality. Site lies in an area where air quality acceptable.
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	0/-	Development compatible with neighbouring uses. Traffic noise from the A428 and A1198 should be capable of mitigation. Some possible issues with noise from adjoining commercial / industrial site that may require offsite mitigation.
	Will it minimise, and where possible address, land contamination?	0	Development not on land likely to be contaminated.	
		Will it protect and where possible enhance the quality of the water environment?	0	Development unlikely to effect water quality. Assumptions for a neutral impact are that appropriate standards and pollution control measures will be achieved through the development process, e.g. as part of Sustainable Drainage Systems (SuDS).
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiversity?	0	No impact on protected sites and species (or impacts could be mitigated).
	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	+/0	Minor positive impact as there are some opportunities for enhancement through the planting of additional copses, extending hedgerows into the site, and the creation of new ponds.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	+/+	Development would create minor opportunities for new Green Infrastructure. New landscaping associated with development of this site will create access to areas of open space within and on the edge of the development including designed greenways and connections to the existing green spaces in Cambourne.

Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	0	REVISED: Neutral impact (generally compatible, or capable of being made compatible with local landscape character). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process. Development of this site would be visible in many long distant views, would reduce the long countryside views into shorter ones, and would bring the development at Cambourne slightly closer to nearby villages, however it would be possible to develop this site without significant harm to landscape character through new landscaping. The smaller footprint would reduce the landscape impact.
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	0	Neutral impact (generally compatible, or capable of being made compatible with local townscape character). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process.
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Archaeological potential will require further information but the assumption for a neutral impact is that it is likely appropriate mitigation can be achieved through the development process.
	Create places, spaces and buildings that work well, wear well and look good	Will it lead to developments built to a high standard of design and good place making that reflects local character?		
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	0/+	Development could create minor additional opportunities for renewable energy.
		Will it promote energy efficiency?		
		Will it minimise contributions to climate change through sustainable construction practices?		
	Reduce vulnerability to future climate change effects	Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	0	Flood Zone 1 and no drainage issues that cannot be appropriately addressed.
		Will it minimise the likely impacts of climate change on the development through appropriate design?		
Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?				
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?		
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?		

Inclusive Communities - Housing	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	+ /+++	Development would create opportunities for new public open space.
	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?		
		Will it provide for housing for the ageing population?		
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	No effect on pitch or plot provision.
Inclusive Communities - Redressing inequalities and involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	+	Rural Centre.
		Sub-Indicator: Distance to centre	---	1,450m from the centre of Cambourne (Broad Street), surrounded by a range of services and facilities.
		Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	+	REVISION: New local facilities or improved existing facilities are proposed of benefit. Revision reflects the smaller scale of development proposed.
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will improve relations between people from different backgrounds or social groups?		
		Will it redress inequalities?		
		Will it increase the ability of people to influence decisions, including 'hard to reach' groups?		
Encourage and enable the active involvement of local people in community activities	Will it encourage engagement with community activities?	+	REVISION: New local community facilities or improved existing facility is proposed of minor benefit (and is viable and sustainable). Revision reflects the smaller scale of development proposed.	

Economic Activity		Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	+ /+++	REVISION: Development would support minor additional employment opportunities. The policy proposes to relocate the existing commitments remaining on the business park to the northern part of the land west of Cambourne.
	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0/+	The assumption is that any additional retail proposed will only be of a suitable scale to serve the needs of new residents and will not impact on other centres. Development could support the vitality or viability of the existing Cambourne centre.
		Will it encourage the rural economy and diversification, and support sustainable tourism?		
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it contribute to providing a range of employment opportunities, in accessible locations?	0	38.79 minutes from site to nearest employment area with 2000+ employees. No employment areas with 2000+ employees can be accessed in less than 30mins - 1.6km walk. (NOTE: Taken from assessment of SHLAA Site 239)
		Will it improve the level of investment in key community services and infrastructure, including broadband?	-	Major utilities infrastructure improvements required, but constraints can be addressed. Development of this site is likely to require a significant amount of new electricity network. There is no spare mains water capacity within the distribution zone. System reinforcement of the gas network is likely to be necessary to accommodate the development of this site. Significant infrastructure upgrades to the sewerage network will be required to accommodate this proposal
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve access to education and training, and support provision of skilled employees to the economy?	-	School capacity not sufficient, but significant issues can be adequately addressed.

Transport	Reduce the need to travel and promote more sustainable transport choices.	Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	0	Total score of 13
		Sub-indicator: Distance to bus stop / rail station	0	794m ACF from the centre of the site to the nearest bus stop (Lower Cambourne, Woodfield Lane).
		Sub-indicator: Frequency of Public Transport	+	Citi 4 service - 20 minute service.
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	0	37 minutes from bus stop to the centre of Cambridge (Lower Cambourne, Woodfield Lane to Cambridge, Emmanuel Street).
		Sub-indicator: Distance for cycling to City Centre or Market Town	0	11.32km ACF from the centre of the site to Cambridge Market.
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	0/-	Minor negative effects incapable of mitigation. Access constraints - the Highways Authority would not permit any accesses onto the A428 or Caxton Gibbet roundabout, and the roundabout to the south of the site on the A1198 would need to be modified. The promoter has indicated that vehicular access to the site would be from the A1198 and from Sheepfold Lane. Development would have a direct impact on A428 with potential capacity issues at the Cambourne Junction and on the corridor between Cambridge and St. Neots / Bedford, particularly junctions at either end of this section.
		Will it make the transport network safer for and promote use of non-motorised modes?	+	The Highway Authority will require new development to provide or contribute to the provision of infrastructure to encourage more sustainable transport links both on and off site. Provision or contribution from this site would result in minor improvement to public transport, walking or cycling facilities.

Site No. Sites 178 & 258 (revised site boundary as included in draft Local Plan)
Address Land south of Babraham Road
Location Sawston
Category of site Rural Centre
Site area 12.04 ha

Theme	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	0	No previously developed land.
		Will it use land efficiently?		
		Will it protect and enhance the best and most versatile agricultural land?	-	Minor loss of best and most versatile agricultural land (Grades 1 and 2) - part of site Grade 2.
		Will it avoid the sterilisation of economic mineral reserves? Will it minimise the degradation/loss of soils due to new development?	0	Site not within an area designated in the Minerals and Waste LDF.
	Minimise waste production and support the reuse and recycling of waste products	Will it encourage reduction in household waste, and increase waste recovery and recycling?		
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	0	Development unlikely to impact on air quality. Site lies in an area where air quality acceptable.
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	0	Development compatible with neighbouring uses.
		Will it minimise, and where possible address, land contamination?	0	Development not on land likely to be contaminated.
		Will it protect and where possible enhance the quality of the water environment?	0	Development unlikely to affect water quality. The site within Groundwater Source Protection Zone 2 which does not rule out development but may influence land use or require pollution control measures. Assumptions for a neutral impact are that appropriate standards and pollution control measures will be achieved through the development process and will mitigate any impact on groundwater.
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiversity?	0	No impact on protected sites and species (or impacts could be mitigated).
	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	+	Minor positive impact as there are some opportunities for enhancement through the provision of treebelts and hedgerows.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process.

Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	0/+	Neutral impact (generally compatible, or capable of being made compatible with local landscape character). Loss of land in Green Belt would have an adverse impact on Green Belt purposes. Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process. Development of this site would have the potential to have a positive impact upon the landscape setting of Sawston provided the design makes a generous provision of land to ensure a soft green edge to the east. The southern boundary crosses a field horizontally to respect the setting of Sawston Hall, a new hedge or plantation would be necessary here.
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	0	Neutral impact (generally compatible, or capable of being made compatible with local townscape character). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process. Adjoins estate housing to the west.
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	0/-	Minor Negative Impact on historic Assets (incapable of satisfactory mitigation) – site forms part of the wider setting of Sawston Hall albeit well screened by trees. new woodland plantation to southern boundary would help mitigate this impact. Archaeological potential will require further information but the assumption for a neutral impact is that it is likely appropriate mitigation can be achieved through the development process.
	Create places, spaces and buildings that work well, wear well and look good	Will it lead to developments built to a high standard of design and good place making that reflects local character?		
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	0	Standard requirements for renewables would apply.
		Will it promote energy efficiency?		
	Reduce vulnerability to future climate change effects	Will it minimise contributions to climate change through sustainable construction practices?		
		Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	0	Flood Zone 1 and no drainage issues that cannot be appropriately addressed.
		Will it minimise the likely impacts of climate change on the development through appropriate design?		
	Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?			
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?		
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?		

Inclusive Communities - Housing	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	+	Development would deliver significant new public open space.	
	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?			
		Will it provide for housing for the ageing population?			
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	No effect on pitch or plot provision.	
Inclusive Communities - Redressing inequalities and involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	+	Rural Centre.	
		Sub-Indicator: Distance to centre	-	884m ACF from the centre of the site Sawston High Street -a cluster of services and facilities within the village.	
		Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	+	New facilities or improved existing facilities are proposed of minor benefit. Call for Sites questionnaire states that part of the site could be used to provide for small scale community facilities such as a Doctors Surgery and shops.	
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will improve relations between people from different backgrounds or social groups?			
		Will it redress inequalities?			
		Will it increase the ability of people to influence decisions, including 'hard to reach' groups?			
	Encourage and enable the active involvement of local people in community activities	Will it encourage engagement with community activities?	+/0	No facilities lost, and no new facilities proposed directly as a result of the development. Call for Sites Questionnaire refers to potential to provide additional community facilities.	

Economic Activity	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	0	Development would have no effect on employment land or premises.
		Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	Development would have no effect on vitality or viability of existing centres. The indicator is likely to apply particularly to sites which include retail, offices, or leisure uses.
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it encourage the rural economy and diversification, and support sustainable tourism?		
		Will it contribute to providing a range of employment opportunities, in accessible locations?	+	25.87 minutes from site to nearest employment area with 2000+ employees. Only 1 employment area with 2000+ employees that can be accessed in less than 30mins - 1.6km walk.
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve the level of investment in key community services and infrastructure, including broadband?	-	Minor Utilities Infrastructure improvements required, but constraints can be addressed. There is insufficient spare mains water capacity within the distribution zone to supply the number of proposed properties which could arise if all the SHLAA sites within the zone were to be developed. The sewerage network is at capacity and will require mitigation. Electricity supply is likely to require local and upstream reinforcement.
		Will it improve access to education and training, and support provision of skilled employees to the economy?	-	School capacity not sufficient, but significant issues can be adequately addressed. Site could potentially provide additional playing fields for the nearby Primary School to enable its expansion on site. Site lies close to both village primary Schools.

Transport	Reduce the need to travel and promote more sustainable transport choices.	Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	0	Total score of 13.
		Sub-indicator: Distance to bus stop / rail station	0	Approximately 696m ACF from the centre of the site to the nearest bus stop.
		Sub-indicator: Frequency of Public Transport	+	20 minute service to Cambridge. Hourly service to Saffron Walden.
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	0	39 Minutes from Sawston to Cambridge. 29 Minutes from Sawston to Saffron Walden.
		Sub-indicator: Distance for cycling to City Centre or Market Town	0	10.01km ACF from the centre of the site to Cambridge Market.
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	0/-	Minor negative effects incapable of mitigation. Access constraints - The Highways Authority comment that the existing access link to the public highway is unsuitable to serve the number of units that are being proposed. Access to the site would also be via a new junction to Babraham Road. Further to the south additional cycle and pedestrian access could be gained via Church Lane and The Green Road subject to impact on character of Conservation Area.
		Will it make the transport network safer for and promote use of non-motorised modes?	0	No impact

Site No. Site 326 (revised proposal as included in draft Local Plan)
Address Comberton, Land at Bennell Farm
Location Comberton
Category of site Group Village
Site area 6.27

Theme	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	0	No previously developed land.
		Will it use land efficiently?		
		Will it protect and enhance the best and most versatile agricultural land?	-	Minor loss of best and most versatile agricultural land (Grades 1 and 2) - small site but all Grade 2.
		Will it avoid the sterilisation of economic mineral reserves? Will it minimise the degradation/loss of soils due to new development?	0	Site not within an area designated in the Minerals and Waste LDF.
	Minimise waste production and support the reuse and recycling of waste products	Will it encourage reduction in household waste, and increase waste recovery and recycling?		
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	0	Development unlikely to impact on air quality. Site lies in an area where air quality acceptable.
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	0	Development compatible with neighbouring uses.
		Will it minimise, and where possible address, land contamination?	0	Development not on land likely to be contaminated
		Will it protect and where possible enhance the quality of the water environment?	0	Development unlikely to affect water quality. Assumptions for a neutral impact are that appropriate standards and pollution control measures will be achieved through the development process and will mitigate any impact on groundwater. Almost all of site included within a protection zone.
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiversity?	0	No impact on protected sites and species (or impacts could be mitigated).
	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	0	Assumptions for a neutral impact are that existing features that warrant retention can be retained or appropriate mitigation will be achieved through the development process.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process.

Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	0	Neutral impact (generally compatible, or capable of being made compatible with local landscape character). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process.
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	0	Neutral impact (generally compatible, or capable of being made compatible with local townscape character). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process.
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Archaeological potential will require further information but the assumption for a neutral impact is that it is likely appropriate mitigation can be achieved through the development process.
	Create places, spaces and buildings that work well, wear well and look good	Will it lead to developments built to a high standard of design and good place making that reflects local character?		
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	0	Standard requirements for renewables would apply.
		Will it promote energy efficiency?		
		Will it minimise contributions to climate change through sustainable construction practices?		
	Reduce vulnerability to future climate change effects	Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	0	Site in Flood Zone 1 and no drainage issues that cannot be appropriately addressed.
		Will it minimise the likely impacts of climate change on the development through appropriate design?		
		Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?		
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?		
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?		

Inclusive Communities - Housing	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	+	Development would create minor opportunities for new publically accessible open space in the form of a community football pitch.
	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?		
		Will it provide for housing for the ageing population?		
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	No effect on pitch or plot provision.
Inclusive Communities - Redressing inequalities and involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	0	Group Village. Proposed as a minor rural centre which would amend the score to a 0.
		Sub-Indicator: Distance to centre	0	665m of nearest centre ACF (Comberton, West Street / Barton Road)
		Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	0	No facilities lost, and no new facilities proposed directly as a result of the development.
		Will improve relations between people from different backgrounds or social groups?		
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will it redress inequalities?		
		Will it increase the ability of people to influence decisions, including 'hard to reach' groups?		
Encourage and enable the active involvement of local people in community activities	Will it encourage engagement with community activities?	+	Will include changing facilities and car parking which will be available to the community, and to the Village College which also hosts many community events which are attended by the public.	

Economic Activity		Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	0	Development would have no effect on employment land or premises.
	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	Development would have no effect on vitality or viability of existing centres. The indicator is likely to apply particularly to sites which include retail, offices, or leisure uses
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it encourage the rural economy and diversification, and support sustainable tourism?		
		Will it contribute to providing a range of employment opportunities, in accessible locations?	+	27.81 minutes from site to nearest employment area with 2000+ employees. Only 1 employment area with 2000+ employees that can be accessed in less than 30mins - 1.6km walk.
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve the level of investment in key community services and infrastructure, including broadband?	+	Minor Utilities Infrastructure improvements required, but constraints can be addressed. There is insufficient spare mains water capacity within the distribution zone to supply the number of proposed properties which could arise if all the SHLAA sites within the zone were to be developed. The sewerage network is at capacity and will require mitigation.
		Will it improve access to education and training, and support provision of skilled employees to the economy?	+	Insufficient spare school capacity but potential for improvement to meet needs. Current spare capacity at the local primary School. Secondary places deficit is being addressed by the construction of a new school at Cambourne to relieve Comberton VC.

Transport	Reduce the need to travel and promote more sustainable transport choices.	Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	+	Total Score of 18
		Sub-indicator: Distance to bus stop / rail station	+++	270m to nearest bus stop (Comberton, Kentings)
		Sub-indicator: Frequency of Public Transport	+	Hourly service (18 service)
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	+	23 Minutes (Comberton, Kentings to Cambridge, Drummer Street)
		Sub-indicator: Distance for cycling to City Centre or Market Town	+	7.77km ACF to Cambridge City Centre
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	0	No capacity constraints identified, safe access can be achieved. A junction located on Long Road would be acceptable to the Highway Authority. The proposed site is acceptable in principle subject to detailed design.
		Will it make the transport network safer for and promote use of non-motorised modes?	0	No impact.

Large Scale Green Belt Development 4000 dwellings

Theme	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	0	No significant Previously Development Land opportunities were identified on the edge of Cambridge.
		Will it use land efficiently?		
		Will it protect and enhance the best and most versatile agricultural land?	---	Delivering this level of growth would require over 20 hectares of high grade agricultural land (in the order of 175 hectares)
		Will it avoid the sterilisation of economic mineral reserves? Will it minimise the degradation/loss of soils due to new development?	0	Site appraisals identify no significant impacts on safeguarded minerals.
	Minimise waste production and support the reuse and recycling of waste products	Will it encourage reduction in household waste, and increase waste recovery and recycling?		
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	---	Large scale development sites needed to deliver this volume of development were identified as having significant negative impacts on air quality, due to increased volume of traffic. Sites in locations near to the A14 or the M11, would be near to areas of poor air quality, including the identified Air Quality Management Area.
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	0	Potential impacts from noise depending on site location, capable of appropriate mitigation.
		Will it minimise, and where possible address, land contamination?	+	Potential for minor benefits through remediation of minor contamination, depending on specific site options.
		Will it protect and where possible enhance the quality of the water environment?	0	Development unlikely to affect water quality. Assumptions for a neutral impact are that appropriate standards and pollution control measures will be achieved through the development process and will mitigate any impact on groundwater.
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiversity?	0	Many Green Belt sites are located near to locally designated sites, such as county wildlife sites. However impacts are capable of appropriate mitigation.
	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	0 / +	Development would have a negative impact on existing features or network links but capable of appropriate mitigation. Some larger sites have the potential to deliver green infrastructure, which could enhance biodiversity networks. Areas with negative impacts incapable of mitigation could be avoided whilst still achieving the scale of development.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	+++	Depending on sites identified there could be potential for delivery of significant additional Green Infrastructure.

Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	---	Sites necessary to deliver this volume of development would have a significant negative impact on the landscape, as identified in the appraisal of individual sites.
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	---	Sites necessary to deliver this volume of development would have a significant negative impact on the townscape, and the setting of Cambridge.
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	0 / -	Development around Fen Ditton would have negative impacts on the conservation area and listed buildings. Some Sites are located near to Scheduled monuments, but impacts are identified as capable of appropriate mitigation. Most sites are in areas of known archaeological potential, but appropriate mitigation possible.
	Create places, spaces and buildings that work well, wear well and look good	Will it lead to developments built to a high standard of design and good place making that reflects local character?		
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	0	Assumed development would meet policy requirements.
		Will it promote energy efficiency?		
		Will it minimise contributions to climate change through sustainable construction practices?		
	Reduce vulnerability to future climate change effects	Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	0	Sufficient sites to accommodate the development could be identified in flood zone 1.
		Will it minimise the likely impacts of climate change on the development through appropriate design?		
		Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?		
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?		
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?		

Inclusive Communities - Housing	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	+++ / ?	A number of larger site proposals specifically reference the potential to deliver significant open space or Green Infrastructure beyond the minimum required by policy.
	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?		
		Will it provide for housing for the ageing population?		
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	No specific proposals.
Inclusive Communities - Redressing inequalities and involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	+++	Edge of Cambridge. This is the top of the sequence in terms of development in South Cambridgeshire. In terms of Cambridge City, sites would be at the bottom of the search sequence, being furthest from the City centre and existing local centres.
		Sub-Indicator: Distance to centre	0/+	Distance varies by site. Assumed that larger sites needed to deliver this quantity of houses could include their own local centres. Appraisal of new settlements assumes local centres would be within 800m of all development.
		Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	+ /+++	Large development sites could deliver new services and facilities.
		Will improve relations between people from different backgrounds or social groups?		
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will it redress inequalities?		
		Will it increase the ability of people to influence decisions, including 'hard to reach' groups?		
Encourage and enable the active involvement of local people in community activities	Will it encourage engagement with community activities?	+	Could deliver new services and facilities to support community involvement.	

Economic Activity		Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	?	Potential to include elements of employment development.
	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	If development of local centres was appropriately scaled, development would have no effect on vitality or viability of existing centres.
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it encourage the rural economy and diversification, and support sustainable tourism?		
		Will it contribute to providing a range of employment opportunities, in accessible locations?	+++	Development on the edge of Cambridge will be highly accessible to existing employment areas. The shorter distances have potential to support walking and cycling, as well as access to frequent public transport on radial routes. As identified in individual appraisals there is variation in actually site access.
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve the level of investment in key community services and infrastructure, including broadband?	-	Major utilities Infrastructure improvements required, but constraints can be addressed. The electricity, mains water, gas and sewerage systems would need reinforcement to increase capacity.
		Will it improve access to education and training, and support provision of skilled employees to the economy?	+	After allowing for surplus school places, development of such sites would be likely to require an increase in school planned admission numbers, which would require the expansion of existing schools and/or provision of new schools.

Transport	Reduce the need to travel and promote more sustainable transport choices.	Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	+++	A package of sites on the edge of Cambridge would score highly in terms of access to public transport.
		Sub-indicator: Distance to bus stop / rail station	+ / +++	Many sites are within 400m - 600m of existing routes, and large sites bring potential for new public transport routes.
		Sub-indicator: Frequency of Public Transport	+ / +++	20 minute service.
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	+ / +++	Typically journey times are under 20mins, although sites further from the edge of Cambridge would have longer journey times.
		Sub-indicator: Distance for cycling to City Centre or Market Town	+++	Sites generally within 5km of Cambridge.
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	-	Insufficient capacity on existing roads. The extent of necessary mitigation measures relating to highway capacity and access arrangements will need to be determined through transport modelling and a detailed transport assessment.
		Will it make the transport network safer for and promote use of non-motorised modes?	+++ / ?	Transport improvements would be required as a result of major developments. Significant scale developments may have greater potential to enable improvements.

Large Scale Green Belt Development 2000 dwellings

Theme	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	0	No significant Previously Development Land opportunities were identified on the edge of Cambridge.
		Will it use land efficiently?		
		Will it protect and enhance the best and most versatile agricultural land?	---	Delivering this level of growth would require over 20 hectares of high grade agricultural land (in the order of 90 hectares)
		Will it avoid the sterilisation of economic mineral reserves? Will it minimise the degradation/loss of soils due to new development?	0	Site appraisals identify no significant impacts on safeguarded minerals.
	Minimise waste production and support the reuse and recycling of waste products	Will it encourage reduction in household waste, and increase waste recovery and recycling?		
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	---	Large scale development sites need to deliver this volume of development were identified as having significant negative impacts on air quality, due to increased volume of traffic. Sites in locations near to the A14 or the M11, would be near to areas of poor air quality, including the identified Air Quality Management Area. With a lower level of development it would be more possible to draw back from these areas.
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	0	Potential impacts from noise depending on site location, capable of appropriate mitigation.
		Will it minimise, and where possible address, land contamination?	+	Potential for minor benefits through remediation of minor contamination, depending on specific site options.
		Will it protect and where possible enhance the quality of the water environment?	0	Development unlikely to affect water quality. Assumptions for a neutral impact are that appropriate standards and pollution control measures will be achieved through the development process and will mitigate any impact on groundwater.
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiversity?	0	Many GB sites are located near to locally designated sites, such as county wildlife sites. However impacts are capable of appropriate mitigation. Development
	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	0 / +	Development would have a negative impact on existing features or network links but capable of appropriate mitigation. Some larger sites have the potential to deliver green infrastructure, which could enhance biodiversity networks. Area with negative impacts incapable of mitigation could be avoided whilst still achieving the scale of development.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	+++	Depending on sites identified there could be potential for delivery of significant additional Green Infrastructure. A distribution of development around smaller sites would potentially be able to deliver less significant levels directly, although financial contributions could still be made through CIL / S106.

Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	---	Sites necessary to deliver this volume of development would have a significant negative impact on the landscape.
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	---	Sites necessary to deliver this volume of development would have a significant negative impact on the townscape, and the setting of Cambridge. Specific impacts are identified in the individual site appraisals.
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	0 / -	Development around Fen Ditton would have negative impacts on the conservation area and listed buildings. Some Sites are located near to Scheduled monuments, but impacts are identified as capable of appropriate mitigation. Most sites are in areas of known archaeological potential, but appropriate mitigation possible.
	Create places, spaces and buildings that work well, wear well and look good	Will it lead to developments built to a high standard of design and good place making that reflects local character?		
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	0	Assumed development would meet policy requirements.
		Will it promote energy efficiency?		
		Will it minimise contributions to climate change through sustainable construction practices?		
	Reduce vulnerability to future climate change effects	Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	0	Sufficient sites to accommodate the development could be identified in flood zone 1.
		Will it minimise the likely impacts of climate change on the development through appropriate design?		
		Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?		
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?		
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?		

Inclusive Communities - Housing	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	+++ / ?	A number of larger site proposals specifically reference the potential to deliver significant open space or Green Infrastructure beyond the minimum required by policy.
	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?		
		Will it provide for housing for the ageing population?		
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	No specific proposals.
Inclusive Communities - Redressing inequalities and involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	+++	Edge of Cambridge. This is the top of the sequence in terms of development in South Cambridgeshire. In terms of Cambridge City, sites would be at the bottom of the search sequence, being furthest from the City centre and existing local centres.
		Sub-Indicator: Distance to centre	0 / +	Distance varies by site. Assumed that larger sites needed to deliver this quantity of houses could include their own local centres. Appraisal of new settlements assumes local centres would be within 800m of all development.
		Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	+ / +++	Large development sites could deliver new services and facilities.
		Will it improve relations between people from different backgrounds or social groups?		
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will it redress inequalities?		
		Will it increase the ability of people to influence decisions, including 'hard to reach' groups?		
Encourage and enable the active involvement of local people in community activities	Will it encourage engagement with community activities?	+	Could deliver new services and facilities to support community involvement.	

Economic Activity		Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	?	Sites would be primarily residential. Potential to include elements of employment development.
	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	If development of local centres was appropriately scaled, development would have no effect on vitality or viability of existing centres.
		Will it encourage the rural economy and diversification, and support sustainable tourism?		
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it contribute to providing a range of employment opportunities, in accessible locations?	+++	Development on the edge of Cambridge will be highly accessible to existing employment areas. The shorter distances have potential to support walking and cycling, as well as access to frequent public transport on radial routes. As identified in individual appraisals there is variation in actually site access.
		Will it improve the level of investment in key community services and infrastructure, including broadband?	-	Major utilities Infrastructure improvements required, but constraints can be addressed. The electricity, mains water, gas and sewerage systems would need reinforcement to increase capacity.
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve access to education and training, and support provision of skilled employees to the economy?	+	After allowing for surplus school places, development of this site would be likely to require an increase in school planned admission numbers, which would require the expansion of existing schools and/or provision of new schools.

Transport	Reduce the need to travel and promote more sustainable transport choices.	Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	+++	A package of sites on the edge of Cambridge would score highly in terms of access to public transport.
		Sub-indicator: Distance to bus stop / rail station	+ / +++	Many sites are within 400m - 600m of existing routes, and large sites bring potential for new public transport routes.
		Sub-indicator: Frequency of Public Transport	+ / +++	20 minute service.
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	+ / +++	Typically journey times are under 20mins, although sites further from the edge of Cambridge would have longer journey times.
		Sub-indicator: Distance for cycling to City Centre or Market Town	+++	Sites generally within 5km of Cambridge.
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	-	Insufficient capacity on existing roads. The extent of necessary mitigation measures relating to highway capacity and access arrangements will need to be determined through transport modelling and a detailed transport assessment.
		Will it make the transport network safer for and promote use of non-motorised modes?	+++ / ?	Transport improvements would be required as a result of major developments. Larger scale developments would have greater potential to enable improvements than smaller or more distributed sites.

Large Scale Green Belt Development 1000 dwellings

Theme	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	0	No significant Previously Development Land opportunities were identified on the edge of Cambridge.
		Will it use land efficiently?		
		Will it protect and enhance the best and most versatile agricultural land?	---	Delivering this level of growth would require over 20 hectares land (in the order of 45 hectares). Whilst a number of smaller sites did not comprise the highest grades of agricultural land, it would not be possible to accommodate this level of development on these sites alone.
		Will it avoid the sterilisation of economic mineral reserves? Will it minimise the degradation/loss of soils due to new development?	0	Site appraisals identify no significant impacts on safeguarded minerals.
	Minimise waste production and support the reuse and recycling of waste products	Will it encourage reduction in household waste, and increase waste recovery and recycling?		
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	---	Large scale development sites need to deliver this volume of development were identified as having significant negative impacts on air quality, due to increased volume of traffic. Sites in locations near to the A14 or the M11, would be near to areas of poor air quality, including the identified Air Quality Management Area. With a lower level of development it would be possible to draw back from these areas.
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	0	Potential impacts from noise depending on site location, capable of appropriate mitigation.
		Will it minimise, and where possible address, land contamination?	+	Potential for minor benefits through remediation of minor contamination, depending on specific site options.
		Will it protect and where possible enhance the quality of the water environment?	0	Development unlikely to affect water quality. Assumptions for a neutral impact are that appropriate standards and pollution control measures will be achieved through the development process and will mitigate any impact on groundwater.
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiversity?	0	Many Green Belt sites are located near to locally designated sites, such as county wildlife sites. However impacts are capable of appropriate mitigation.
	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	0 / +	Development would have a negative impact on existing features or network links but capable of appropriate mitigation. Areas with negative impacts incapable of mitigation could be avoided whilst still achieving the scale of development.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	+ / +++	Depending on sites identified there could be potential for delivery of significant additional Green Infrastructure. A distribution of development around smaller sites would potentially be able to deliver less significant levels directly, although financial contributions could still be made through CIL / S106.

Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	---	Deliverable sites necessary to deliver this volume of development would have a significant negative landscape impact.
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	---	Sites necessary to deliver this volume of development would have a significant negative impact on the townscape, and the setting of Cambridge. Specific impacts are identified in the individual site appraisals.
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	0 / -	Development around Fen Ditton would have negative impacts on the conservation area and listed buildings. Some Sites are located near to Scheduled monuments, but impacts are identified as capable of appropriate mitigation. Most sites are in areas of known archaeological potential, but appropriate mitigation possible.
	Create places, spaces and buildings that work well, wear well and look good	Will it lead to developments built to a high standard of design and good place making that reflects local character?		
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	0	Assumed development would meet policy requirements.
		Will it promote energy efficiency?		
		Will it minimise contributions to climate change through sustainable construction practices?		
	Reduce vulnerability to future climate change effects	Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	0	Sufficient sites to accommodate the development could be identified in flood zone 1.
		Will it minimise the likely impacts of climate change on the development through appropriate design?		
		Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?		
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?		
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?		

Inclusive Communities - Housing	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	+++ / ?	A number of larger site proposals specifically reference the potential to deliver significant open space or Green Infrastructure beyond the minimum required by policy. The selection of fewer or smaller sites would reduce these opportunities.
	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?		
		Will it provide for housing for the ageing population?		
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	No specific proposals.
Inclusive Communities - Redressing Inequalities and Involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	+++	Edge of Cambridge. This is the top of the sequence in terms of development in South Cambridgeshire. In terms of Cambridge City, sites would be at the bottom of the search sequence, being furthest from the City centre and existing local centres.
		Sub-Indicator: Distance to centre	0 / -	Distance varies by site. Assumed that larger sites needed to deliver this quantity of houses would include there own local centres. If the 1000 dwellings was delivered through smaller sites, there would be greater reliance on existing local centres. One larger site could include a new local centre.
		Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	+ / +++	If the 1000 dwellings was delivered through smaller sites, there would be greater reliance on existing local centres. One larger site could include a new local centre.
		Will improve relations between people from different backgrounds or social groups?		
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will it redress inequalities?		
		Will it increase the ability of people to influence decisions, including 'hard to reach' groups?		
Encourage and enable the active involvement of local people in community activities	Will it encourage engagement with community activities?		+	Could deliver new services and facilities to support community involvement.

Economic Activity		Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	?	Sites would be primarily residential. Potential to include elements of employment development.
	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	If development of local centres was appropriately scaled, development would have no effect on vitality or viability of existing centres. Smaller developments would be likely to be more reliant on existing centres.
		Will it encourage the rural economy and diversification, and support sustainable tourism?		
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it contribute to providing a range of employment opportunities, in accessible locations?	+++	Development on the edge of Cambridge will be highly accessible to existing employment areas. The shorter distances have potential to support walking and cycling, as well as access to frequent public transport on radial routes. As identified in individual appraisals there is variation in actually site access.
		Will it improve the level of investment in key community services and infrastructure, including broadband?	-	Major utilities Infrastructure improvements required, but constraints can be addressed. The electricity, mains water, gas and sewerage systems would need reinforcement to increase capacity.
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve access to education and training, and support provision of skilled employees to the economy?	+	After allowing for surplus school places, development of this site would be likely to require an increase in school planned admission numbers, which would require the expansion of existing schools and/or provision of new schools.

Transport	Reduce the need to travel and promote more sustainable transport choices.	Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	+++	A package of sites on the edge of Cambridge would score highly in terms of access to public transport.
		Sub-indicator: Distance to bus stop / rail station	+ / +++	Many sites are within 400m - 600m of existing routes.
		Sub-indicator: Frequency of Public Transport	+ / +++	Typically 20 minute services or better are available.
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	+ / +++	Typically journey times are under 20mins, although sites further from the edge of Cambridge would have longer journey times.
		Sub-indicator: Distance for cycling to City Centre or Market Town	+++	Sites generally within 5km of Cambridge.
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	-	Insufficient capacity on existing roads. The extent of necessary mitigation measures relating to highway capacity and access arrangements will need to be determined through transport modelling and a detailed transport assessment.
		Will it make the transport network safer for and promote use of non-motorised modes?	+ / ?	Transport improvements would be required as a result of major developments. Significant scale developments may have greater potential to enable improvements. If delivered through a number of smaller there may be less potential to deliver significant public transport or cycling improvements.

Site No. Policy SP/1 (Site Specific Policies DPD)
Address Orchard Park
Location Orchard Park
Category of site Cambridge Urban Area
Site area

Theme	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	+	Forms the last few remaining parcels of a development site.
		Will it use land efficiently?		
		Will it protect and enhance the best and most versatile agricultural land?	0	
		Will it avoid the sterilisation of economic mineral reserves? Will it minimise the degradation/loss of soils due to new development?	0	
	Minimise waste production and support the reuse and recycling of waste products	Will it encourage reduction in household waste, and increase waste recovery and recycling?		
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	-	Partly located in an AQMA, mitigation measures would be required, but can be achieved.
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	-	Noise mitigation required, due to location adjoining A14.
		Will it minimise, and where possible address, land contamination?	0	
		Will it protect and where possible enhance the quality of the water environment?	0	
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiversity?	0	No designated sites present.
	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	0	
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	0	

Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	0	
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	+	Forms the remaining parcels of a development site, opportunity to improve townscape through their completion.
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	0	Appropriate mitigation on arbury camp required.
		Create places, spaces and buildings that work well, wear well and look good		
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	0	
		Will it promote energy efficiency?		
		Will it minimise contributions to climate change through sustainable construction practices?		
	Reduce vulnerability to future climate change effects	Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	0	Flood zone 1 (Low Risk)
		Will it minimise the likely impacts of climate change on the development through appropriate design?		
		Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?		
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?		
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?		

Inclusive Communities - Housing	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	0	
	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?

		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	
Inclusive Communities - Redressing inequalities and involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	+++	Cambridge urabn area
		Sub-Indicator: Distance to centre	+++ / +	Orchard Park will have a local centre onsite
		Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	0	Remaining parcels wil primarily be residnetial development.
		Will improve relations between people from different backgrounds or social groups?		
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will it redress inequalities?		
		Will it increase the ability of people to influence decisions, including 'hard to reach' groups?		
Encourage and enable the active involvement of local people in community activities	Will it encourage engagement with community activities?	0		

Economic Activity		Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	0	
	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it encourage the rural economy and diversification, and support sustainable tourism?		
		Will it contribute to providing a range of employment opportunities, in accessible locations?	+++	Close to Cambridge Science Park
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve the level of investment in key community services and infrastructure, including broadband?	+++	
		Will it improve access to education and training, and support provision of skilled employees to the economy?	+	

Transport	Reduce the need to travel and promote more sustainable transport choices.	Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	+++	Benefits from access to the Guided busway.
		Sub-indicator: Distance to bus stop / rail station	+++	
		Sub-indicator: Frequency of Public Transport	+++	
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	+++	
		Sub-indicator: Distance for cycling to City Centre or Market Town	+++	
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	0	
		Will it make the transport network safer for and promote use of non-motorised modes?	0	

Site No. Policy SP/2 (Site Specific Policies DPD) & SC298
Address Land south of the A14 and west of Cambridge Road
Location Histon & Impington
Category of site Edge of Cambridge
Site area 30.96 ha

Theme	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	0	No significant area of previously developed land.
		Will it use land efficiently?		
		Will it protect and enhance the best and most versatile agricultural land?	-	Significant loss (20 hectares or more) of best and most versatile agricultural land (Grades 1 and 2) - a large proportion of the site is grade 2, the remainder of the site is grade 3.
		Will it avoid the sterilisation of economic mineral reserves? Will it minimise the degradation/loss of soils due to new development?	0	The majority of this site falls within the Minerals Safeguarding Area for sand and gravel. However, given the size of the site and its proximity to sensitive uses i.e. residential development, it is unlikely to be worked as an economic resource. If the site is allocated and developed any mineral extracted should be used in a sustainable manner.
	Minimise waste production and support the reuse and recycling of waste products	Will it encourage reduction in household waste, and increase waste recovery and recycling?		
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	-	Developable area avoids the air quality management area to the north. Mitigation measures will still be required, including consideration of the impact of
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	0	High level of noise associated with A14, but capable of appropriate mitigation.
		Will it minimise, and where possible address, land contamination?	+	Potential for minor benefits through remediation of minor contamination.
		Will it protect and where possible enhance the quality of the water environment?	0	Development unlikely to affect water quality. Assumptions for a neutral impact are that appropriate standards and pollution control measures will be achieved through the development process and will mitigate any impact on groundwater.
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiversity?	0	No impact on protected sites and species (or impacts could be mitigated). Does not contain designated sites, however adjacent to SSSI on Histon Road.
	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	+	Development could have a positive impact by enhancing existing features and adding new features or network links. Greatest impact likely to be from the extensive loss of open farmland leading to impact upon farmland species including brown hare and farmland birds. Badgers and Barn Owls also noted in submitted ecology survey for NIAB3.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Assumptions for a neutral impact include that appropriate design and mitigation measures would be achieved through the development process.

Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	-	Development at this site would have negative impacts on the Green Belt purposes however mitigation is possible.
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	-	Development at this site would have negative impacts on the green belt purposes but mitigation possible.
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	0	Grade II* listed Girton College lies over 400m from the site and is separated from it by suburban housing. Impington Farm consists of a group of three former farm buildings located tight in the corner formed by the old Cambridge Road and the A14. The farmhouse may be of sufficient interest to list. The site is located in an area of high archaeological potential. The Iron Age ringwork Arbury Camp was located to the immediate east (HER 08479) and cropmarks of probable Iron Age or Roman enclosures are known to the west (HER 08955, 08956). Elements of this cropmark complex clearly extend into the proposal area. Archaeological excavations are currently underway in advance of development to south, with evidence for Iron Age and Roman settlement (HER ECB3788). County Historic Environment Team advise that further information regarding the extent and significance of archaeology in the area would be necessary. This should include the results of field survey to determine whether the impact of development could be managed through mitigation. Archaeological potential will require further information but the assumption for a neutral impact is that it is likely appropriate mitigation can be achieved through the development process.
	Create places, spaces and buildings that work well, wear well and look good	Will it lead to developments built to a high standard of design and good place making that reflects local character?		
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	0	Standard requirements for renewables would apply.
		Will it promote energy efficiency?		
		Will it minimise contributions to climate change through sustainable construction practices?		
	Reduce vulnerability to future climate change effects	Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	0	Site within Flood Zone 1 and no drainage issues that cannot be appropriately addressed.
		Will it minimise the likely impacts of climate change on the development through appropriate design?		
Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?				
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?		
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?		

Inclusive Communities - Housing	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	+++	The landowners propose substantial areas of new public open space.
	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?		
		Will it provide for housing for the ageing population?		
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	No effect on pitch or plot provision.
Inclusive Communities - Redressing inequalities and involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	+++	Edge of Cambridge
		Sub-Indicator: Distance to centre	+	400-800m from new local centre at NIAB 1.
		Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	+++	New local facilities or improved existing facilities are proposed of significant benefit. The development will include a new secondary school, primary school, local shopping and community facilities.
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will improve relations between people from different backgrounds or social groups?		
		Will it redress inequalities?		
		Will it increase the ability of people to influence decisions, including 'hard to reach' groups?		
Encourage and enable the active involvement of local people in community activities	Will it encourage engagement with community activities?	0	No facilities lost, and no new facilities proposed directly as a result of the development.	

Economic Activity		Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	+	Potential to include elements of employment development.
	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	+	Development would support vitality or viability of existing centres. Local centre for the whole development proposed within the adjoining development in Cambridge City.
		Will it encourage the rural economy and diversification, and support sustainable tourism?		
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it contribute to providing a range of employment opportunities, in accessible locations?	+++	1.52km ACF – nearest employment 2000+ employees.
		Will it improve the level of investment in key community services and infrastructure, including broadband?	-	Major utilities infrastructure improvements required, but constraints can be addressed. The electricity, mains water, gas and sewerage systems will need reinforcement to increase capacity.
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve access to education and training, and support provision of skilled employees to the economy?	+	After allowing for surplus school places, development of this site would be likely to require an increase in school planned admission numbers, which may require the expansion of existing schools and/or provision of new schools. New schools to be provided on site.

Transport	Reduce the need to travel and promote more sustainable transport choices.	Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	+++	Total score of 22.
		Sub-indicator: Distance to bus stop / rail station	+++	266m from nearest bus stop,
		Sub-indicator: Frequency of Public Transport	+	20 minute service.
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	+++	Citi 8 service: 12 minute journey time. (Arbury, Brownlow Road – Cambridge, Emmanuel Street).
		Sub-indicator: Distance for cycling to City Centre or Market Town	+++	2.33km ACF from the centre of the site to Cambridge Market.
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	0	Safe access can be achieved. Insufficient capacity on existing roads. The extent of necessary mitigation measures relating to highway capacity will need to be determined through transport modelling and a detailed transport assessment.
		Will it make the transport network safer for and promote use of non-motorised modes?	+	Subject to there being good links from the development to the proposed orbital cycle route to the southeast and to the adjoining development in Cambridge City and to the centre of Cambridge. There should also be a cycle/pedestrian link to Thornton Way.

Site No. Policy CE/3 (Cambridge East Area Action Plan) - North of Newmarket Road and North of Cherry Hinton
Address Cambridge East - North of Newmarket Road and North of Cherry Hinton
Location Cambridge East
Category of site Edge of Cambridge
Site area

Theme	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	0	Some elements of Previously Development Land north of Newmarket Road
		Will it use land efficiently?		
		Will it protect and enhance the best and most versatile agricultural land?	---	Includes areas of grade 2 agricultural land.
		Will it avoid the sterilisation of economic mineral reserves? Will it minimise the degradation/loss of soils due to new development?	0	
	Minimise waste production and support the reuse and recycling of waste products	Will it encourage reduction in household waste, and increase waste recovery and recycling?		Cambridge East is identified in the Minerals and Waste LDF as an area of search for waste management facilities.
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	-	Potential for impact on local air quality. Outside AQMA.
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	-	Noise issues from surrounding uses may require mitigation.
		Will it minimise, and where possible address, land contamination?	+	Potential to require remediation from former uses.
		Will it protect and where possible enhance the quality of the water environment?	0	
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiversity?	0	
	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	+	Potential for biodiversity enhancement, sought by the Cambridge East Area Action Plan.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	+	Potential to deliver elements of Green Infrastructure
	Maintain and enhance the diversity and distinctiveness of landscape character?	Will it maintain and enhance the diversity and distinctiveness of landscape character?	-	Land was removed from Green Belt by previous round of plan making. Site was considered capable of development without significant impact on Green Belt purposes.

Landscape, Townscape and Cultural Heritage	and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of townscape character?	-	
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	0	AAP requires measures to investigate archaeology on the site.
	Create places, spaces and buildings that work well, wear well and look good	Will it lead to developments built to a high standard of design and good place making that reflects local character?		
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	+/?	AAP requires at least 10% of energy requirements to be met through renewables.
		Will it promote energy efficiency?		
		Will it minimise contributions to climate change through sustainable construction practices?		
	Reduce vulnerability to future climate change effects	Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	0	
		Will it minimise the likely impacts of climate change on the development through appropriate design?		
		Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?		
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?		
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?		

Inclusive Communities - Housing	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	+/?	AAP requires delivery of open space to meet needs generated.
	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?		
		Will it provide for housing for the ageing population?		
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	
Inclusive Communities - Redressing inequalities and involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	+++	Edge of Cambridge
		Sub-Indicator: Distance to centre	+++	Will include local centre on site.
		Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	+++	Will include new local centre, and AAP requires delivery of community facilities to meet needs.
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will improve relations between people from different backgrounds or social groups?		
		Will it redress inequalities?		
		Will it increase the ability of people to influence decisions, including 'hard to reach' groups?		
Encourage and enable the active involvement of local people in community activities	Will it encourage engagement with community activities?	+	Cambridge East AAP requires delivery of community facilities.	

Economic Activity	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	+	Residential led, but potential to retain employment north of newmarket road.
		Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	Cambridge East AAP specifically requires regard to be had to impact on other centres.
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it encourage the rural economy and diversification, and support sustainable tourism?		
		Will it contribute to providing a range of employment opportunities, in accessible locations?	+++	
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve the level of investment in key community services and infrastructure, including broadband?	-	Infrastructure improvements required to accommodate this scale of development. Measures are set out in the Cambridge East Area Action Plan.
		Will it improve access to education and training, and support provision of skilled employees to the economy?	+	New school provision required.

Transport	Reduce the need to travel and promote more sustainable transport choices.	Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	+++	
		Sub-indicator: Distance to bus stop / rail station	+++ / +	
		Sub-indicator: Frequency of Public Transport	+++	Park and ride buses every 10 minutes. Citi1 service runs part north of Cherry Hinton site, providing 20 minute frequency service.
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	+++	
		Sub-indicator: Distance for cycling to City Centre or Market Town	+++	
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	-	Road access mitigation measures will be required.
		Will it make the transport network safer for and promote use of non-motorised modes?	+++	Development will provide opportunities for public transport / walking and cycling infrastructure improvements. Measures are outlined in the Cambridge East Area Action Plan.

Site No. Policy SP/9 (Site Specific Policies DPD)
Address Fulbourn and Ida Darwin Hospitals
Location Fulbourn
Category of site Minor Rural Centre
Site area

Theme	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	+++	Previously developed sites.
		Will it use land efficiently?		
		Will it protect and enhance the best and most versatile agricultural land?	0	
		Will it avoid the sterilisation of economic mineral reserves? Will it minimise the degradation/loss of soils due to new development?	0	
	Minimise waste production and support the reuse and recycling of waste products	Will it encourage reduction in household waste, and increase waste recovery and recycling?		
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	-	The site is not located within an area that experiences poor quality. However, residential development could lead to an increase in local traffic. It is anticipated that some traffic generated by the development that will use local roads to enter and exit Cambridge which is an AQMA.
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	0	The site is adjacent to a railway line. However, the policy requires that investigation into noise pollution and vibration is investigated and attenuated as necessary.
		Will it minimise, and where possible address, land contamination?	+	Land contamination must be investigated and remediated.
		Will it protect and where possible enhance the quality of the water environment?	0	The site is also in a Groundwater Protection Zone and appropriate measures will be needed to protect the environment
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiversity?	0	
	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	+	The site is generally of low ecological sensitivity and developers will be required to undertake ecological surveys and monitoring prior to the commencement of construction and propose a Biodiversity Strategy for the protection and enhancement of biodiversity that establishes which areas will be protected and enhanced, and appropriate mitigation measures. Reducing development on the Ida Darwin site will enable enhancement.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	+	Opportunity to deliver a green wedge, and enhanced countryside access.

Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	+	Potential for this to have positive implications by the removal of all buildings from the western part of the site, and the creation of an area of open countryside character which could help increase the openness of the Green Belt.
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	+	Potential for this to have positive implications by the removal of all buildings from the western part of the site, and the creation of an area of open countryside character which could help increase the openness of the Green Belt.
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	0	Development on Fulbourn Hospital site will need to consider impact on the Fulbourn Hospital Conservation area. There is a scheduled monument north of the Ida Darwin site. Archeology will require mitigation.
	Create places, spaces and buildings that work well, wear well and look good	Will it lead to developments built to a high standard of design and good place making that reflects local character?		
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	0	
		Will it promote energy efficiency?		
		Will it minimise contributions to climate change through sustainable construction practices?		
	Reduce vulnerability to future climate change effects	Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	0	Flood zone 1 (low Risk). Known high water table will require mitigation.
		Will it minimise the likely impacts of climate change on the development through appropriate design?		
		Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?		
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?		
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?		

Inclusive Communities - Housing	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	+	Creation of a green wedge.
	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?		
		Will it provide for housing for the ageing population?		
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	
Inclusive Communities - Redressing inequalities and involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	+	Proposed Minor Rural Centre (from Rural Centre)
		Sub-Indicator: Distance to centre	---	Ida Darwin site around 1200m from village centre of Fulbourn
		Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	+	Will support continued operation of the hospital, through site rationalisation.
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will improve relations between people from different backgrounds or social groups?		
		Will it redress inequalities?		
	Encourage and enable the active involvement of local people in community activities	Will it increase the ability of people to influence decisions, including 'hard to reach' groups?		
Will it encourage engagement with community activities?		0		

Economic Activity		Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	+	Will support continued operation of the hospital, through site rationalisation.
	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it encourage the rural economy and diversification, and support sustainable tourism?		
		Will it contribute to providing a range of employment opportunities, in accessible locations?	+++	
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve the level of investment in key community services and infrastructure, including broadband?	+	
		Will it improve access to education and training, and support provision of skilled employees to the economy?	-	

Transport	Reduce the need to travel and promote more sustainable transport choices.	Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	+	Score of 15.
		Sub-indicator: Distance to bus stop / rail station	+++	Bus stop on site frontage
		Sub-indicator: Frequency of Public Transport	0	Citi1 provides 30 minute service
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	-	Around 45 minutes
		Sub-indicator: Distance for cycling to City Centre or Market Town	+	6km
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	0	
		Will it make the transport network safer for and promote use of non-motorised modes?	0

Transport	Reduce the need to travel and promote more sustainable transport choices.	Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	+	Total score 16.
		Sub-indicator: Distance to bus stop / rail station	+++	Bus stops on Ermine Street near to parts of the site.
		Sub-indicator: Frequency of Public Transport	---	Less than hourly service
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	+++	13 Minutes from Papworth Everard to St. Ives
		Sub-indicator: Distance for cycling to City Centre or Market Town	+	7km to St.Ives
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	0	
		Will it make the transport network safer for and promote use of non-motorised modes?	0	

Site No. Policy SP/8 (Site Specific Policies DPD)
Address Bayer Cropscience, Hauxton
Location Hauxton
Category of site Group Village
Site area 8.7 ha.

Theme	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	+++	Site comprised vacant industrial site.
		Will it use land efficiently?		
		Will it protect and enhance the best and most versatile agricultural land?	0	
		Will it avoid the sterilisation of economic mineral reserves? Will it minimise the degradation/loss of soils due to new development?	0	Part of minerals safeguarding area in Minerals and Waste LDF.
	Minimise waste production and support the reuse and recycling of waste products	Will it encourage reduction in household waste, and increase waste recovery and recycling?		
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	0	
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	0	
		Will it minimise, and where possible address, land contamination?	+++	Significant opportunity for remediation of contaminated site.
		Will it protect and where possible enhance the quality of the water environment?	0	Measures required to protect water environment.
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiversity?	0	
	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	+	Policy requires existing features to be retained and enhanced.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	+	Enables creation of riverside informal openspace.

Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	+	The development should secure a reduced visual impact on the openness of the Cambridge Green Belt.
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	+	The development should secure a reduced visual impact on the openness of the Cambridge Green Belt.
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	+	The development will need to find uses for the Listed Buildings at the Hauxton Mill complex and this will keep heritage assets in use.
		Create places, spaces and buildings that work well, wear well and look good		
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	0	
		Will it promote energy efficiency?		
		Will it minimise contributions to climate change through sustainable construction practices?		
	Reduce vulnerability to future climate change effects	Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	0 / -	Site largely in flood zone 1 (low risk). Some in zone 2 (medium risk, however, the policy requires appropriate mitigation measures and it is assumed that these will be effective in reducing the flood risk.
		Will it minimise the likely impacts of climate change on the development through appropriate design?		
		Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?		
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?		
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?		

Inclusive Communities - Housing	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	+	Policy seeks informal riverside open space.
	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?		
		Will it provide for housing for the ageing population?		
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	
Inclusive Communities - Redressing inequalities and involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	-	Nearest Village Hauxton, although policy requires cycle links to park and ride
		Sub-Indicator: Distance to centre	0	around 800m
		Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	+	Policy requires contributions to local facilities.
		Will improve relations between people from different backgrounds or social groups?		
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will it redress inequalities?		
		Will it increase the ability of people to influence decisions, including 'hard to reach' groups?		
Encourage and enable the active involvement of local people in community activities	Will it encourage engagement with community activities?	+	Policy requires delivery of community facilities.	

Economic Activity		Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	+	Although the former industrial site will be lost, the policy requires mixed use development incorporating B1 employment uses.
	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it encourage the rural economy and diversification, and support sustainable tourism?		
		Will it contribute to providing a range of employment opportunities, in accessible locations?	+	
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve the level of investment in key community services and infrastructure, including broadband?	-	
		Will it improve access to education and training, and support provision of skilled employees to the economy?	+	

Transport	Reduce the need to travel and promote more sustainable transport choices.	Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	0	Policy seeks improvements to public transport, and improvements to access to Park and Ride.
		Sub-indicator: Distance to bus stop / rail station	0	Around 750m from centre of site
		Sub-indicator: Frequency of Public Transport	-	Bus no. 26 offers hourly service to Cambridge
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	+	around 20 minutes to Drummer street,.
		Sub-indicator: Distance for cycling to City Centre or Market Town	+	6 km.
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	-	Will require mitigation.
		Will it make the transport network safer for and promote use of non-motorised modes?	+	Policy seeks cycling and public transport improvements.

Site No: R1**Address:** Land known as Bypass Farm, West of Cottenham Road, Histon**Location:** Histon**Category of site:** Open Space and Recreation**Site area:** 4.8 ha.

THEME	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	0	100% greenfield site.
		Will it use land efficiently?	N/A	
		Will it protect and enhance the best and most versatile agricultural land?	-	Approximately two thirds of the site is Grade 2 agricultural land.
		Will it avoid the sterilisation of economic mineral reserves?	0	Located in sand and gravel safeguarding area, Minerals and Waste LDF. Open space unlikely to sterilize minerals reserves.
	Will it minimise the degradation/loss of soils due to new development'?			
Minimise waste production and support the reuse and recycling of waste products	Will it encourage reduction in household waste, and increase waste recovery and recycling?	N/A		
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	0	Recreation and open space would not have significant impact.
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	0	Development compatible with neighbouring uses.
		Will it minimise, and where possible address, land contamination?	0	
		Will it protect and where possible enhance the quality of the water environment?	0	Outside Groundwater Source Protection Zone
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiveristy?	0	No designated sites in the vicinity.

	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	+	Site currently agricultural land. Potential for enhancement, such as increased tree planting and areas to promote biodiversity.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	0	No specific measures proposed.
Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	0	Use as open space could have minimal landscape impacts. There may be opportunities for improvement, such as hedging and tree planting. Any built development in this open flat landscape could impact on long-distance views, and would need to be carefully sited and landscaped. The site is located in the Green Belt. The NPPF establishes that provision of appropriate facilities for outdoor sport, outdoor recreation and for cemeteries, may be appropriate development as long as it preserves the openness of the Green Belt and does not conflict with the purposes of including land within it.
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	0	May be opportunities to improve the village edge.
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	0	No heritage designations near to the site.
	Create places, spaces and buildings that work well, wear well and look good	Will it lead to developments built to a high standard of design and good place making that reflects local character?	N/A	
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	0	
		Will it promote energy efficiency?	N/A	
		Will it minimise contributions to climate change through sustainable construction practices?	N/A	

	Reduce vulnerability to future climate change effects	Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	0	Site within zone 1 (low risk).
		Will it minimise the likely impacts of climate change on the development through appropriate design?	N/A	
		Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?	N/A	
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?	+	Would increase supply of open space and recreation to a village currently under provided, particularly in the north of the village.
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?	+	Site is overlooked by residential development.
Inclusive Communities - Housing	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	+++	Development of an additional 4 hectares of open space would make a significant difference to a village which is currently under provided against the Council's standards by around 12 hectares for sport and play.
	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?	N/A	
		Will it provide for housing for the ageing population?	N/A	
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	
- Redressing inequalities and involving the	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	+	Although located north of the village, the majority of existing provision is located to the south, thus improving accessibility
		Sub-Indicator: Distance to centre		

		Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	0	
		Will improve relations between people from different backgrounds or social groups?	N/A	
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will it redress inequalities?	N/A	
		Will it increase the ability of people to influence decisions, including 'hard to reach' groups?	N/A	
	Encourage and enable the active involvement of local people in community activities	Will it encourage engagement with community activities?	+	Potential to support additional community activities through recreation.
Economic Activity	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	0	
		Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?	N/A	
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	
	Help people gain access to satisfying work appropriate to their skills,	Will it encourage the rural economy and diversification, and support sustainable tourism?	N/A	

	potential and place of residence	Will it contribute to providing a range of employment opportunities, in accessible locations?	0	
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve the level of investment in key community services and infrastructure, including broadband?	0	
		Will it improve access to education and training, and support provision of skilled employees to the economy?	N/A	
Transport	Reduce the need to travel and promote more sustainable transport choices.	Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	+++	The Citi 8 service stops directly opposite the site, providing a 20 minute frequency service mon-sat, and hourly in Sundays. A site would improve accessibility to open space to the northern part of Histon.

Site area: 16 hectares

THEME	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	0	100% greenfield site.
		Will it use land efficiently?	N/A	
		Will it protect and enhance the best and most versatile agricultural land?	0	Grade 3 agricultural land. Development would not affect best and most versatile agricultural land (Grades 1 and 2).
		Will it avoid the sterilisation of economic mineral reserves?	0	Minerals Consultation area for sand and gravel in Waste LDF.
	Will it minimise the degradation/loss of soils due to new development?			
Minimise waste production and support the reuse and recycling of waste products	Will it encourage reduction in household waste, and increase waste recovery and recycling?	N/A		
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	- / ?	Site lies in an area where air quality acceptable.. Negative impact on air quality due to scale of development generating local traffic movements. Transport Impact Assessment would be required, and measures to mitigate impacts.
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	- / / ?	Development will create an additional source of noise, and will also require flood lighting during matches. Further evidence would be required to demonstrate how any impacts could be mitigated.
		Will it minimise, and where possible address, land contamination?	+	Historically used for controlled tipping of sub-soil and inert building materials. Potential for minor benefits through remediation of minor contamination.
		Will it protect and where possible enhance the quality of the water environment?	0	Outside Groundwater Source Protection Zone
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiversity?	0	No site designations in the vicinity.

	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	-/ --- /?	Site comprises woodland and scrub, supporting local wildlife. Development would be likely to require removal of some trees. Further work would be needed to survey biodiversity, and avoid / mitigate adverse impacts.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	0	No specific measures proposed.
Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	---	Negative impact on the landscape, and on the openness of the Green Belt. Existing tree belts have potential to provide screening from wider views if retained and enhanced, but development will introduce development and flood lighting to this rural area.
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	-	Stadium development would extend the village north, into the Green Belt.
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	0	No heritage designations near to the site. There is a moated site on the western edge of the site. Archaeological investigation would be required as part of any planning applications.
	Create places, spaces and buildings that work well, wear well and look good	Will it lead to developments built to a high standard of design and good place making that reflects local character?	N/A	
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	0	
		Will it promote energy efficiency?	N/A	
		Will it minimise contributions to climate change through sustainable construction practices?	N/A	
	Reduce vulnerability to future climate change effects	Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	0	Site within zone 1 (low risk).

		Will it minimise the likely impacts of climate change on the development through appropriate design?	N/A	
		Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?	N/A	
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?	N/A	
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?	N/A	
Inclusive Communities - Housing	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	+++	Proposal includes large area of land that the promoters propose to gifted to the Parish, which could provide additional public open space and facilities, in a village which has a shortfall against current open space standards.
	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?	N/A	
		Will it provide for housing for the ageing population?	N/A	
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	
Inclusive Communities - Redressing inequalities and involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	+	Sawston is a Rural Centre.
		Sub-Indicator: Distance to centre	-	Sawston 1000m
		Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	+	The proposal includes facilities which could provide additional facilities for the village.

		Will it improve relations between people from different backgrounds or social groups?	N/A	
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will it redress inequalities? Will it increase the ability of people to influence decisions, including 'hard to reach' groups?	N/A	
	Encourage and enable the active involvement of local people in community activities	Will it encourage engagement with community activities?	0	
Economic Activity	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	+	Development would provide a small amount of jobs to the area, primarily part-time.
		Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?	0	
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it encourage the rural economy and diversification, and support sustainable tourism?	0	
		Will it contribute to providing a range of employment opportunities, in accessible locations?	N/A	
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve the level of investment in key community services and infrastructure, including broadband?	+	

		Will it improve access to education and training, and support provision of skilled employees to the economy?	N/A	
Transport	Reduce the need to travel and promote more sustainable transport choices.	Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	0	Total score of 14.
		Sub-indicator: Distance to bus stop / rail station	0	Around 700 metres from bus stop near Winship Road.
		Sub-indicator: Frequency of Public Transport	+	Citi 7 provides an approximately 20 minute frequency service during the day on weekdays and Saturdays, with an hourly service in the evening.
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	0	Timetabled 37mins to Cambridge.
		Sub-indicator: Distance for cycling to City Centre or Market Town	+	9 km as the crow flies to Cambridge.
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	0 / ?	It is likely that access and capacity could be achieved but mitigation measures would be required. Further evidence would be required in the form of a Transport assessment and Travel Plan.
		Will it make the transport network safer for and promote use of non-motorised modes?	0

	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?		

Inclusive Communities - Housing	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	+	Will deliver open space in village where there is a shortfall against adopted standards.
	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?		
		Will it provide for housing for the ageing population?		
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	
Inclusive Communities - Redressing inequalities and involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	N/A	
		Sub-Indicator: Distance to centre	+++	259m from the centre of the site to a point along The Lanes, a central point in the village surrounded by services and facilities.
		Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	0	
		Will improve relations between people from different backgrounds or social groups?		
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will it redress inequalities?		
		Will it increase the ability of people to influence decisions, including 'hard to reach' groups?		
	Encourage and enable the active involvement of local people in community activities	Will it encourage engagement with community activities?	0	

Economic Activity		Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	0	
	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it encourage the rural economy and diversification, and support sustainable tourism?		
		Will it contribute to providing a range of employment opportunities, in accessible locations?	0	
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve the level of investment in key community services and infrastructure, including broadband?	0	
		Will it improve access to education and training, and support provision of skilled employees to the economy?	0	

Transport	Reduce the need to travel and promote more sustainable transport choices.	Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	+	Total score of 16.
		Sub-indicator: Distance to bus stop / rail station	+++	261m ACF from the centre of the site to the nearest bus stop.
		Sub-indicator: Frequency of Public Transport	-	Hourly Service
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	+	51 minutes from Over to Cambridge; 28 minutes from Over to St. Ives
		Sub-indicator: Distance for cycling to City Centre or Market Town	+	5.96km ACF from the centre of the site to St. Ives Market.
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	0	
		Will it make the transport network safer for and promote use of non-motorised modes?	0	

Site No. Policy SP/15 (Site Specific Policies DPD)

Address Green separation at Longstanton

Location Between Northstowe and Longstanton

Category of site

Site area

Theme	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	0	
		Will it use land efficiently?		
		Will it protect and enhance the best and most versatile agricultural land?	0	
		Will it avoid the sterilisation of economic mineral reserves? Will it minimise the degradation/loss of soils due to new development?	0	
	Minimise waste production and support the reuse and recycling of waste products	Will it encourage reduction in household waste, and increase waste recovery and recycling?		
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	0	
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	0	
		Will it minimise, and where possible address, land contamination?	0	
		Will it protect and where possible enhance the quality of the water environment?	0	
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiversity?	0	
	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	0	
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	+/?	

Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	+	Important as part of landscape setting of Northstowe and Longstanton.
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	+	Important as part of landscape setting of Northstowe and Longstanton.
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	+	Policy refers to protection of the Conservation area.
		Create places, spaces and buildings that work well, wear well and look good		
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	0	
		Will it promote energy efficiency?		
		Will it minimise contributions to climate change through sustainable construction practices?		
	Reduce vulnerability to future climate change effects	Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	0	
		Will it minimise the likely impacts of climate change on the development through appropriate design?		
		Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?		
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?		
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?		

Inclusive Communities - Housing	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	+/?	area has potential to include openspace.
	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?		
		Will it provide for housing for the ageing population?		
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	
Inclusive Communities - Redressing inequalities and involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	0	
		Sub-Indicator: Distance to centre	N/A	
		Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	0	
		Will improve relations between people from different backgrounds or social groups?		
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will it redress inequalities?		
		Will it increase the ability of people to influence decisions, including 'hard to reach' groups?		
Encourage and enable the active involvement of local people in community activities	Will it encourage engagement with community activities?	0		

Economic Activity		Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	0	
	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it encourage the rural economy and diversification, and support sustainable tourism?		
		Will it contribute to providing a range of employment opportunities, in accessible locations?	0	
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve the level of investment in key community services and infrastructure, including broadband?	0	
		Will it improve access to education and training, and support provision of skilled employees to the economy?	0	

Transport	Reduce the need to travel and promote more sustainable transport choices.	Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	0	
		Sub-indicator: Distance to bus stop / rail station	N/A	
		Sub-indicator: Frequency of Public Transport	N/A	
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	N/A	
		Sub-indicator: Distance for cycling to City Centre or Market Town	N/A	
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	0	
		Will it make the transport network safer for and promote use of non-motorised modes?	0	

Site No: EM1

Address: Land between the A14 and Milton

Location: Milton

Category of site: Employment Site

Site area: 1.8 ha

THEME	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	0	100% greenfield site.
		Will it use land efficiently?	N/A	
		Will it protect and enhance the best and most versatile agricultural land?	0	Grade 3 agricultural land.
		Will it avoid the sterilisation of economic mineral reserves? Will it minimise the degradation/loss of soils due to new development'?	0	Waste Consultation Area, and Waste Water Treatment Works Consultation Area in Minerals and Waste LDF, but capable of appropriate mitigation.
	Minimise waste production and support the reuse and recycling of waste products	Will it encourage reduction in household waste, and increase waste recovery and recycling?	N/A	
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	-	Site Adjoins A14, but not in AQMA. Impacts on employment development likely to be capable of appropriate mitigation. Minor negative impact on air quality due to traffic generated on A14.
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	0	Development compatible with neighbouring uses. Some potential for traffic noise from A14, but should be possible to mitigate.
		Will it minimise, and where possible address, land contamination?	+	Potential form former uses, but capable of appropriate mitigation.
		Will it protect and where possible enhance the quality of the water environment?	0	Outside Groundwater Source Protection Zone
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiveristy?	0	

	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	+	Existing site largely laid to grass with some trees and hedges. Potential for enhancement.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	0	No specific measures proposed.
Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	---	Significant impact on the landscape, and on Green Belt purposes. The site has been identified as important in maintaining a green wedge between Cambridge and Milton. The site has a distinctive green character having mature trees along all of its boundaries and forms a vital function.
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	---	Impact of merging village with Cambridge. This is noted in the Cambridge Green Belt Study 2002 figure 1641LP/09 as a special quality to be safeguarded.
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	0	No heritage designations near to the site.
	Create places, spaces and buildings that work well, wear well and look good	Will it lead to developments built to a high standard of design and good place making that reflects local character?	N/A	
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	0	
		Will it promote energy efficiency?	N/A	
		Will it minimise contributions to climate change through sustainable construction practices?	N/A	
	Reduce vulnerability to future climate change effects	Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	0	Site within zone 1 (low risk).

		Will it minimise the likely impacts of climate change on the development through appropriate design?	N/A	
		Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?	N/A	
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?	N/A	
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?	N/A	
Inclusive Communities - Housing	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	0	No additional open space proposed.
	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?	N/A	
		Will it provide for housing for the ageing population?	N/A	
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	
Inclusive Communities - Redressing inequalities and involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	+	Site lies between Cambridge (+++) and Milton (0/+)
		Sub-Indicator: Distance to centre	+++	Milton village 400m , Chesterton 2000m
		Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	0	Proposed for employment development.

		Will improve relations between people from different backgrounds or social groups?	N/A	
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will it redress inequalities?	N/A	
		Will it increase the ability of people to influence decisions, including 'hard to reach' groups?	N/A	
	Encourage and enable the active involvement of local people in community activities	Will it encourage engagement with community activities?	0	Proposed for employment development.
Economic Activity	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	+	Could deliver 1.7 hectares of employment land on the edge of Cambridge.
		Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?	+	Site is located near to the Cambridge Science Park on the edge of Cambridge, but limited scale would mean impact is not significant.
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it encourage the rural economy and diversification, and support sustainable tourism?	0	
Will it contribute to providing a range of employment opportunities, in accessible locations?		+++		

	Support appropriate investment in people, places, communications and other infrastructure	Will it improve the level of investment in key community services and infrastructure, including broadband?	+++	Near to Cambridge STW.
		Will it improve access to education and training, and support provision of skilled employees to the economy?	N/A	
Transport	Reduce the need to travel and promote more sustainable transport choices.	Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	+++	
		Sub-indicator: Distance to bus stop / rail station	+++	Around 200 metres from bus stop near Winship Road.
		Sub-indicator: Frequency of Public Transport	0	Bus no. 9 provides an approximately 30 minute frequency service during the day, whether less frequency at some times.
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	+++	Timetabled 15mins to Cambridge.
		Sub-indicator: Distance for cycling to City Centre or Market Town	+++	4 km as the crow flies to Cambridge.
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	0	It is likely that access and capacity could be achieved but mitigation measures would be required. Further evidence would be required in the form of a Transport assessment and Travel Plan.
		Will it make the transport network safer for and promote use of non-motorised modes?	0	

Site No: EM2

Address: Land south of park and ride west of A10

Location: Milton

Category of site: Employment Site

Site area: 9.5 ha

THEME	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	0	100% greenfield site.
		Will it use land efficiently?	N/A	
		Will it protect and enhance the best and most versatile agricultural land?	-	Mainly Grade 2 agricultural land.
		Will it avoid the sterilisation of economic mineral reserves?	0	With the exception of a small part of the eastern corner, this site falls within the Waste Consultation Area for Milton Landfill, Milton (including the Household Recycling Centre). This Consultation Area covers the landfill site and extends for a further 250 metres. Development within this Consultation Area must not prejudice existing waste management operations. Assumed capable of mitigation.
	Will it minimise the degradation/loss of soils due to new development'?	0		
Minimise waste production and support the reuse and recycling of waste products	Will it encourage reduction in household waste, and increase waste recovery and recycling?	N/A		
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	-	Within 500m of Milton A14 junction, but not in AQMA. Impacts on employment development likely to be capable of appropriate mitigation. Minor negative impact on air quality due to traffic generated on A14.
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	---	Some potential for traffic noise from A14, and odour issues from nearby waste uses.
		Will it minimise, and where possible address, land contamination?	0 / +	Due to nearby landfill, contamination will require investigation.
		Will it protect and where possible enhance the quality of the water environment?	0	Outside Groundwater Source Protection Zone
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiveristy?	0	No designated sites in the vicinity.

	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	+	Site currently open fields. Potential for enhancement, such as increased tree planting and areas to promote biodiversity.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	0	No specific measures proposed.
Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	---	Significant impact on the landscape, and on Green Belt purposes.
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	---	Impact on character and scale of village.
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	0	No heritage designations near to the site. Archaeological remains would require investigation and evaluation prior to determining any planning application on the site.
	Create places, spaces and buildings that work well, wear well and look good	Will it lead to developments built to a high standard of design and good place making that reflects local character?	N/A	
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	0	
		Will it promote energy efficiency?	N/A	
		Will it minimise contributions to climate change through sustainable construction practices?	N/A	
	Reduce vulnerability to future climate change effects	Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	0	Site within zone 1 (low risk).

		Will it minimise the likely impacts of climate change on the development through appropriate design?	N/A	
		Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?	N/A	
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?	N/A	
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?	N/A	
Inclusive Communities - Housing	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	0	No additional open space proposed.
	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?	N/A	
		Will it provide for housing for the ageing population?	N/A	
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	
Inclusive Communities - Redressing inequalities and involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	-/ 0	Site adjoins Milton, currently a Group Village (subject to consultation as to whether it should be a higher category of better served group / Minor Rural Centre)
		Sub-Indicator: Distance to centre	-	850m to centre of Milton
		Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	0	Proposed for employment development.

		Will it improve relations between people from different backgrounds or social groups?	N/A	
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will it redress inequalities? Will it increase the ability of people to influence decisions, including 'hard to reach' groups?	N/A N/A	
	Encourage and enable the active involvement of local people in community activities	Will it encourage engagement with community activities?	0	Proposed for employment development.
Economic Activity	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	+ / ?	Could deliver 9.5 hectares of employment land. Separated from Cambridge reducing walking and cycling access, but accessible to park and ride.
		Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?	+	Separated from Cambridge, but of a significant scale.
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it encourage the rural economy and diversification, and support sustainable tourism?	0	
		Will it contribute to providing a range of employment opportunities, in accessible locations?	+ / ?	Could deliver 9.5 hectares of employment land. Separated from Cambridge reducing walking and cycling access, but accessible to park and ride.
Support appropriate investment in people, places, communications and other infrastructure	Will it improve the level of investment in key community services and infrastructure, including broadband?	+	Minor Utilities Infrastructure improvements required, but constraints can be addressed.	

		Will it improve access to education and training, and support provision of skilled employees to the economy?	N/A	
Transport	Reduce the need to travel and promote more sustainable transport choices.	Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	+++	Based on Park and Ride Service
		Sub-indicator: Distance to bus stop / rail station	+++	Around 200 metres from park & ride
		Sub-indicator: Frequency of Public Transport	+++	Park and Ride has 10 min frequency during the day.
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	+	Timetabled 20 mins to Cambridge.
		Sub-indicator: Distance for cycling to City Centre or Market Town	+++	4.5 km as the crow flies to Cambridge. Note due to A10 A14, some routes may be circuitous.
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	0	It is likely that access and capacity could be achieved but mitigation measures would be required. Further evidence would be required in the form of a Transport assessment and Travel Plan.
		Will it make the transport network safer for and promote use of non-motorised modes?	0	

Site No: EM3

Address: TKA Tallent Site, Bourn Airfield

Location: Bourn

Category of site: Employment Site

Site area: 9.4 ha

THEME	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	+++	Site is largely previously developed.
		Will it use land efficiently?	N/A	
		Will it protect and enhance the best and most versatile agricultural land?	0	Not agricultural land.
		Will it avoid the sterilisation of economic mineral reserves?	0	
	Will it minimise the degradation/loss of soils due to new development'?	0		
Minimise waste production and support the reuse and recycling of waste products	Will it encourage reduction in household waste, and increase waste recovery and recycling?	N/A		
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	0	
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	+++	Existing industrial units on the site have in the past led to enforcement action due to statutory noise and odour nuisances caused to existing residential premises. The appraisal of the Bourn Airfield new settlement proposal identified that it would bring sensitive premises closer to these industrial units if they remained. Development of the site could therefore provide an opportunity to deliver more compatible employment uses if the site is taken forward, and development was appropriately designed and implemented.
		Will it minimise, and where possible address, land contamination?	+	Contamination issues capable of being addressed by planning condition.
		Will it protect and where possible enhance the quality of the water environment?	0	Outside Groundwater Source Protection Zone
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiveristy?	0	

	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	0	Assumptions for a neutral impact are that existing features that warrant retention can be retained or appropriate mitigation will be achieved through the development process.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	0	No specific measures proposed.
Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	0 / +	As the site comprises existing large industrial buildings, development could provide opportunities to improve landscape impact of the site. Existing site views of the site from the west are partly screened by trees and hedges, although the large hangar style buildings can be seen above the tree line. The buildings can be seen from the A428 to the north. The site could be subject to a landscaping scheme which could lessen wider impacts. Wider impacts of the site itself would also be lessened if it formed part of a wider development of the bourn airfield site.
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	0 / +	As above.
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	0	No heritage designations near to the site.
	Create places, spaces and buildings that work well, wear well and look good	Will it lead to developments built to a high standard of design and good place making that reflects local character?	N/A	
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	0	
		Will it promote energy efficiency?	N/A	
		Will it minimise contributions to climate change through sustainable construction practices?	N/A	
	Reduce vulnerability to future climate change effects	Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	0	Site is located in Flood Zone 1.

		Will it minimise the likely impacts of climate change on the development through appropriate design?	N/A	
		Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?	N/A	
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?	N/A	
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?	N/A	
Inclusive Communities - Housing	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	0	No additional open space proposed.
	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?	N/A	
		Will it provide for housing for the ageing population?	N/A	
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	
Inclusive Communities - Redressing inequalities and involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	-	Nearest village is Highfields Caldecote , a Group Village. (If part of a Bourn Airfield new village option, could score higher).
		Sub-Indicator: Distance to centre	-	Around 800m ACF to Highfileds Caldecote Primary School
		Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	0	Proposed for employment development.

		Will it improve relations between people from different backgrounds or social groups?	N/A	
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will it redress inequalities? Will it increase the ability of people to influence decisions, including 'hard to reach' groups?	N/A N/A	
	Encourage and enable the active involvement of local people in community activities	Will it encourage engagement with community activities?	0	Proposed for employment development.
Economic Activity	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	+	Could deliver / retain 9.4 hectares of employment land. Would be very accessible to new village option, less so if a standalone development.
		Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?	+ / ?	A development of this scale could support development of clusters, although evidence base suggested need for land was more limited, and primary need was related to Cambridge.
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it encourage the rural economy and diversification, and support sustainable tourism?	0	
		Will it contribute to providing a range of employment opportunities, in accessible locations?	+	Could deliver / retain 9.4 hectares of employment land. Would be very accessible to new village option, less so if a standalone development.
Support appropriate investment in people, places, communications and other infrastructure	Will it improve the level of investment in key community services and infrastructure, including broadband?	-	The assessment of the Bourn Airfield option identified the need for updated utilities to accommodate development. This site alone would be a much less significant scale, and incorporates existing development.	

		Will it improve access to education and training, and support provision of skilled employees to the economy?	N/A	
Transport	Reduce the need to travel and promote more sustainable transport choices.	Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	+	Total score of 15 from criteria below.
		Sub-indicator: Distance to bus stop / rail station	+	Around 500 metres from bus stop (St.Neots Road) (4)
		Sub-indicator: Frequency of Public Transport	+	Citi for provides a 20 minute frequency during the day. (4)
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	+	Timetabled 20mins to Cambridge during the day, 40 mins during morning peak.(4)
		Sub-indicator: Distance for cycling to City Centre or Market Town	0	10.1 km as the crow flies to Cambridge. (3)
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	0	It is likely that access and capacity could be achieved but mitigation measures would be required. Further evidence would be required in the form of a Transport assessment and Travel Plan.
		Will it make the transport network safer for and promote use of non-motorised modes?	0	

Site No: EM4

Address: Land adjoining Sawston Bypass

Location: Sawston

Category of site: Employment Site

Site area: 3.7 ha

THEME	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	0	100% greenfield site.
		Will it use land efficiently?	N/A	
		Will it protect and enhance the best and most versatile agricultural land?	-	A significant part of the site is grade 2 agricultural land.
		Will it avoid the sterilisation of economic mineral reserves?	-	A small part of the site within an area designated in the Minerals and Waste LDF but development would not have a negative impact.
	Will it minimise the degradation/loss of soils due to new development'?	-		
Minimise waste production and support the reuse and recycling of waste products	Will it encourage reduction in household waste, and increase waste recovery and recycling?	N/A		
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	-	Minor negative impact on air quality due to scale of development generating local traffic movements.
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	0	Noise issues form railway capable of appropriate mitigation.
		Will it minimise, and where possible address, land contamination?	0	
		Will it protect and where possible enhance the quality of the water environment?	0	Small part within zone 2 and zone 3 Groundwater Source Protection Zone The site within Groundwater Source Protection Zone 2 which does not rule out development but may influence land use or require pollution control measures. Assumptions for a neutral impact are that appropriate standards and pollution control measures will achieved through the development process and will mitigate any impact on groundwater.
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiveristy?	---	Part of the site is a SSSI, providing a wetland environment supporting birdlife. There is no evidence that the site could be developed without causing harm to this site.

	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	---	Potential harm to biodiversity as a result of impact on designated sites.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	0	No specific measures proposed.
Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	---	Much of the site is flat open agricultural land. Site is visible from higher land of Cambridge Road to the east. As a result development would have a much greater impact than the existing Spicer's site. It would not be capable of appropriate mitigation.
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	---	It would create a substantial area of built development on the western side of Sawston, resulting in a significant impact on townscape. .
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	0	The site is located to the north of the nationally important Iron Age hillfort Borough Hill (Scheduled Monument Number 1009396). There is evidence for a Saxon cemetery to the east. Excavations to the north have identified evidence for Iron Age, Roman and Saxon settlement. County Council Historic Environment Team would recommend evaluation prior to the determination of any planning application.
	Create places, spaces and buildings that work well, wear well and look good	Will it lead to developments built to a high standard of design and good place making that reflects local character?	N/A	
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	0	
		Will it promote energy efficiency?	N/A	
		Will it minimise contributions to climate change through sustainable construction practices?	N/A	
	Reduce vulnerability to future climate change effects	Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	0	Site within zone 1 (low risk).

		Will it minimise the likely impacts of climate change on the development through appropriate design?	N/A	
		Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?	N/A	
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?	N/A	
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?	N/A	
Inclusive Communities - Housing	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	0	No additional open space proposed.
	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?	N/A	
		Will it provide for housing for the ageing population?	N/A	
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	
Inclusive Communities - Redressing inequalities and involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	+	The nearest village is Sawston, a Rural Centre.
		Sub-Indicator: Distance to centre	---	The centre of Sawston is 1400m form the centre of the site.
		Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	0	Proposed for employment development.

		Will improve relations between people from different backgrounds or social groups?	N/A	
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will it redress inequalities? Will it increase the ability of people to influence decisions, including 'hard to reach' groups?	N/A N/A	
	Encourage and enable the active involvement of local people in community activities	Will it encourage engagement with community activities?	0	Proposed for employment development.
Economic Activity	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	?	Could deliver 3.7 hectares of employment land , but relatively isolated location, with limited public transport, walking and cycling access. Evidence also suggests primary employment land need is related to Cambridge.
		Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?	+ / ?	A development of this scale could support development of clusters, although evidence base suggested need for land was more limited, and primary need was related to Cambridge.
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it encourage the rural economy and diversification, and support sustainable tourism?	0	
		Will it contribute to providing a range of employment opportunities, in accessible locations?	?	Could deliver 3.7 hectares of employment land , but relatively isolated location, with limited public transport, walking and cycling access. Evidence also suggests primary employment land need is related to Cambridge.
Support appropriate investment in people, places, communications and other infrastructure	Will it improve the level of investment in key community services and infrastructure, including broadband?	+++	Capacity in existing STW to accommodate development	

		Will it improve access to education and training, and support provision of skilled employees to the economy?	N/A	
Transport	Reduce the need to travel and promote more sustainable transport choices.	Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	0	Total score of 11.
		Sub-indicator: Distance to bus stop / rail station	---	Around 850 metres from bus stop on New Road, but no timetabled service. High Street Sawston 1250m (0)
		Sub-indicator: Frequency of Public Transport	+	Citi 7 service provides 20 minute frequency service from Sawston High Street. (4)
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	0	Timetabled 37/39 mins to Cambridge. (3)
		Sub-indicator: Distance for cycling to City Centre or Market Town	+	8.5 km as the crow flies to Cambridge. (4)
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	0	It is likely that access and capacity could be achieved but mitigation measures would be required. Further evidence would be required in the form of a Transport assessment and Travel Plan.
		Will it make the transport network safer for and promote use of non-motorised modes?	0	

Site No: EM5

Address: Land north of Melbourn, south of the A10

Location: Melbourn

Category of site: Employment Site

Site area: 33.5 ha

THEME	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	0	100% greenfield site.
		Will it use land efficiently?	N/A	
		Will it protect and enhance the best and most versatile agricultural land?	-	Grade 2 agricultural land.
		Will it avoid the sterilisation of economic mineral reserves?	0	Site not within a designated area identified in the Minerals and Waste LDF.
	Will it minimise the degradation/loss of soils due to new development'?			
Minimise waste production and support the reuse and recycling of waste products	Will it encourage reduction in household waste, and increase waste recovery and recycling?	N/A		
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	-	Scale of development in the countryside could have minor negative impacts on air quality.
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	-	Possible adverse noise impact due to operational noise such as fixed plant, deliveries and collections and off site noise on local roads. Noise assessment required. However adequate mitigation possible but may be restrictive.
		Will it minimise, and where possible address, land contamination?	0 / +	Previous uses would require investigation prior to determining a planning application.
		Will it protect and where possible enhance the quality of the water environment?	0	Outside Groundwater Source Protection Zone
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiveristy?	0	

	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	0	Presence of protected species – Site is within the Chalklands area. These support species and habitats characterised by scattered chalk grassland, beechwood plantations on dry hill tops, willow and alder in wetter valleys, scrub of hawthorn and blackthorn with ivy or bramble beneath. Spring-fed fens, mires and marshy ground with reed, sedge and hemp agrimony occur along with small chalk rivers supporting watercrowfoots and pondweeds with reed sweet-grass at the margins with bullhead fish and occasional brown trout and water vole. Large open arable fields may support rare arable plants such as grass poly or Venus’s looking-glass. Brown hare and typical farmland birds, such as linnet, yellow hammer and corn bunting also occur. Any development proposals should show how features of biodiversity value have been protected or adequately integrated into the design.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	0	No specific measures proposed.
Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	---	Any development of this site would greatly alter the character of this open countryside area and would create an isolated development remote from any facilities in neighbouring settlements. Impact on the landscape and townscape would be significant, visible from a wide area, and would be incapable of appropriate mitigation.
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	---	Development would significantly close the gap between Melbourn and Shepreth, resulting in a significant negative impact on townscape, incapable of appropriate mitigation.
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	0	No heritage designations near to the site. Evidence of archaeology nearby, would require investigation.
	Create places, spaces and buildings that work well, wear well and look good	Will it lead to developments built to a high standard of design and good place making that reflects local character?	N/A	
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	0	
		Will it promote energy efficiency?	N/A	
		Will it minimise contributions to climate change through sustainable construction practices?	N/A	

	Reduce vulnerability to future climate change effects	Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	0	Significant majority of site within zone 1 (low risk).
		Will it minimise the likely impacts of climate change on the development through appropriate design?	N/A	
		Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?	N/A	
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?	N/A	
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?	N/A	
Inclusive Communities - Housing	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	0	No additional open space proposed.
	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?	N/A	
		Will it provide for housing for the ageing population?	N/A	
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	
- Redressing inequalities and involving the	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	0	Nearest settlement if Melbourn (Minor Rural Centre)
		Sub-Indicator: Distance to centre	---	

		Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	0	Proposed for employment development.
		Will improve relations between people from different backgrounds or social groups?	N/A	
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will it redress inequalities?	N/A	
		Will it increase the ability of people to influence decisions, including 'hard to reach' groups?	N/A	
	Encourage and enable the active involvement of local people in community activities	Will it encourage engagement with community activities?	0	Proposed for employment development.
Economic Activity	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	+/?	Given the scale of site it could provide a significant scale of employment development. However, isolated location, with limited public transport, walking and cycling access. Evidence also suggests primary employment land need is related to Cambridge. If combined with a residential site would improve accessibility to a residential community.
		Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?	+ / ?	A development of this scale could support development of clusters, although evidence base suggested need for land was more limited, and primary need was related to Cambridge.
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	
	Help people gain access to satisfying work appropriate to their skills,	Will it encourage the rural economy and diversification, and support sustainable tourism?	0	

	potential and place of residence	Will it contribute to providing a range of employment opportunities, in accessible locations?	+/?	Given the scale of site it could provide a significant scale of employment development. However, isolated location, with limited public transport, walking and cycling access. Evidence also suggests primary employment land need is related to Cambridge. If combined with a residential site would improve accessibility to a residential community.
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve the level of investment in key community services and infrastructure, including broadband?	+	Infrastructure improvements would be required.
		Will it improve access to education and training, and support provision of skilled employees to the economy?	N/A	
Transport	Reduce the need to travel and promote more sustainable transport choices.	Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	+	
		Sub-indicator: Distance to bus stop / rail station	+	Around 500 metres from middle of the site to bus stop on Shepreth Road.
		Sub-indicator: Frequency of Public Transport	-	Bus no. 26 provides an approximately hourly service during the day.
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	+++	28 mins to Cambridge, 13 mins to Royston.
		Sub-indicator: Distance for cycling to City Centre or Market Town	0	13km as the crow flies to Cambridge.
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	0	It is likely that access and capacity could be achieved but mitigation measures would be required. Further evidence would be required in the form of a Transport assessment and Travel Plan.
	Will it make the transport network safer for and promote use of non-motorised modes?	0		

Site No: EM6

Address: Land off London Road

Location: Pampisford

Category of site: Employment Site

Site area: 1.6 ha

THEME	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	+++	Site is largely previously developed.
		Will it use land efficiently?	N/A	
		Will it protect and enhance the best and most versatile agricultural land?	0	Not agricultural land.
		Will it avoid the sterilisation of economic mineral reserves?	0	
	Will it minimise the degradation/loss of soils due to new development'?	0		
Minimise waste production and support the reuse and recycling of waste products	Will it encourage reduction in household waste, and increase waste recovery and recycling?	N/A		
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	0	Site not near major road or AQMA
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	0	Noise issues need to be appropriately addressed, to protect the amenity of nearby residential properties.
		Will it minimise, and where possible address, land contamination?	+	Contamination issues capable of being addressed by planning condition.
		Will it protect and where possible enhance the quality of the water environment?	0	Outside Groundwater Source Protection Zone
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiveristy?	0	

	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	+	Recent planning applications included ecological appraisal, which identified no habitats of ecological value, although features on site offered local opportunities for wildlife. Appropriate mitigation and enhancement measures can be applied.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	0	No specific measures proposed.
Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	0	Development will be seen from London Road and the A1301, but in the context of existing commercial buildings on the site. With appropriate design it will be possible to develop the site without significant impact on landscape or townscape with an appropriate mitigation strategy.
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	0	
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	0	No heritage designations near to the site.
	Create places, spaces and buildings that work well, wear well and look good	Will it lead to developments built to a high standard of design and good place making that reflects local character?	N/A	
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	0	
		Will it promote energy efficiency?	N/A	
		Will it minimise contributions to climate change through sustainable construction practices?	N/A	
	Reduce vulnerability to future climate change effects	Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	-	Site within zone 2 (medium risk). An FRA has demonstrated issues can be appropriately addressed.

		Will it minimise the likely impacts of climate change on the development through appropriate design?	N/A	
		Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?	N/A	
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?	N/A	
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?	N/A	
Inclusive Communities - Housing	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	0	No additional open space proposed.
	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?	N/A	
		Will it provide for housing for the ageing population?	N/A	
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	
Inclusive Communities - Redressing inequalities and involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	+++	Lies within Pampisford, an infill village which would score ---, but adjoins southern edge of Sawston.
		Sub-Indicator: Distance to centre	---	Sawston 1300m (measured to Sawston, infill village of Pampisford does not have a village centre)
		Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	0	Proposed for employment development.

		Will it improve relations between people from different backgrounds or social groups?	N/A	
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will it redress inequalities? Will it increase the ability of people to influence decisions, including 'hard to reach' groups?	N/A	
	Encourage and enable the active involvement of local people in community activities	Will it encourage engagement with community activities?	0	Proposed for employment development.
Economic Activity	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	+	Would result in completion of this partially developed employment site, 1.6 hectares of employment land, on the edge of Sawston.
		Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?	N/A	
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it encourage the rural economy and diversification, and support sustainable tourism?	N/A	
		Will it contribute to providing a range of employment opportunities, in accessible locations?	+	Would result in completion of this partially developed employment site, 1.6 hectares of employment land, on the edge of Sawston.
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve the level of investment in key community services and infrastructure, including broadband?	-	Minor Utilities Infrastructure improvements required, but constraints can be addressed. There is insufficient spare mains water capacity within the distribution zone to supply the number of proposed properties which could arise if all the SHLAA sites within the zone were to be developed. The sewerage network is approaching capacity and will require investigation and possibly mitigation.

		Will it improve access to education and training, and support provision of skilled employees to the economy?	N/A	
Transport	Reduce the need to travel and promote more sustainable transport choices.	Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	0	
		Sub-indicator: Distance to bus stop / rail station	+++	Around 200 metres from bus stop.
		Sub-indicator: Frequency of Public Transport	-	Citi7 provides an approximately hourly frequency service during the day.
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	0	Timetabled 41 mins to Cambridge, 25 mins to Saffron Walden.
		Sub-indicator: Distance for cycling to City Centre or Market Town	0	11 km as the crow flies to Cambridge.
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	0	Through the recent planning permissions, it was demonstrated that access could be achieved, with appropriate mitigation measures.
		Will it make the transport network safer for and promote use of non-motorised modes?	0	

Site No: EM7

Economic Activity	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	+	Would support additional employment development.
		Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?	+	Park has potential to support a variety of types of units.
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it encourage the rural economy and diversification, and support sustainable tourism?	0	
		Will it contribute to providing a range of employment opportunities, in accessible locations?	-	Increase in employment provision, but not in an accessible by road rather than other modes, distant from residential areas.
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve the level of investment in key community services and infrastructure, including broadband?	+	

		Will it improve access to education and training, and support provision of skilled employees to the economy?	N/A	
Transport	Reduce the need to travel and promote more sustainable transport choices.	Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	---	Total score of 3. The site has poor access to public transport, nearest services are located in Swavesey.
		Sub-indicator: Distance to bus stop / rail station	---	
		Sub-indicator: Frequency of Public Transport	---	
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	---	
		Sub-indicator: Distance for cycling to City Centre or Market Town	0	
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	---	Concern regarding level of development served near to Cambridge Road junction
		Will it make the transport network safer for and promote use of non-motorised modes?	0	

Site No: EM8

Address: Land at Cambridge Road

Location: Orwell

Category of site: Employment Site

Site area: 1.3 ha.

THEME	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	0	100% greenfield site.
		Will it use land efficiently?	N/A	
		Will it protect and enhance the best and most versatile agricultural land?	-	Grade 2 agricultural land.
		Will it avoid the sterilisation of economic mineral reserves?	0	
		Will it minimise the degradation/loss of soils due to new development'?	0	
	Minimise waste production and support the reuse and recycling of waste products	Will it encourage reduction in household waste, and increase waste recovery and recycling?	N/A	
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	0	
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	- / ?	Potential noise issues from development and impact on adjoining residential development.
		Will it minimise, and where possible address, land contamination?	0	
		Will it protect and where possible enhance the quality of the water environment?	0	Outside Groundwater Source Protection Zone
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiveristy?	---	Impact on biodiversity, in particular Barbestelle Bats associated with Wimpole and Eversden Woods SAC. Site lies at the end of Wimple Hall Historic Park and garden, a dark area known to provide a flight path.

	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	---	For reasons stated above, development would result in greater habitat fragmentation.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	0	No specific measures proposed.
Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	---	Impact on rural character and setting of village, particularly associated with park and garden.
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	---	Impact on village character, moving away from linear form of development.
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	---	Lies directly opposite the Wimpole Hall Historic Park and Garden.
	Create places, spaces and buildings that work well, wear well and look good	Will it lead to developments built to a high standard of design and good place making that reflects local character?	N/A	
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	0	
		Will it promote energy efficiency?	N/A	
		Will it minimise contributions to climate change through sustainable construction practices?	N/A	
	Reduce vulnerability to future climate change effects	Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	0	Site within zone 1 (low risk).

		Will it minimise the likely impacts of climate change on the development through appropriate design?	N/A	
		Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?	N/A	
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?	N/A	
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?	N/A	
Inclusive Communities - Housing	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	0	No additional open space proposed.
	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?	N/A	
		Will it provide for housing for the ageing population?	N/A	
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	
Inclusive Communities - Redressing inequalities and involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	-	The nearest village is Orwell, identified as a potential Rural Centre in Issue and Options 2012.
		Sub-Indicator: Distance to centre	---	The centre of Orwell is 1600m from the centre of the site.
		Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	0	

		Will it improve relations between people from different backgrounds or social groups?	N/A	
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will it redress inequalities?	N/A	
		Will it increase the ability of people to influence decisions, including 'hard to reach' groups?	N/A	
	Encourage and enable the active involvement of local people in community activities	Will it encourage engagement with community activities?	0	
Economic Activity	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	+	Would support a local business.
		Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?	0	Not proposed for this type of development.
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it encourage the rural economy and diversification, and support sustainable tourism?	0	
		Will it contribute to providing a range of employment opportunities, in accessible locations?	-	Small increase in employment provision, but not in an accessible location.
Support appropriate investment in people, places, communications and other infrastructure	Will it improve the level of investment in key community services and infrastructure, including broadband?	+		

		Will it improve access to education and training, and support provision of skilled employees to the economy?	N/A	
Transport		Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	0	Total score of 11.
	Reduce the need to travel and promote more sustainable transport choices.	Sub-indicator: Distance to bus stop / rail station	+++	Around 400 metres from bus stop (6)
		Sub-indicator: Frequency of Public Transport	---	Bus 75 service provides less than hourly service to Cambridge. (0)
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	-	Timetabled 35/46 mins to Cambridge. (2)
		Sub-indicator: Distance for cycling to City Centre or Market Town	0	12 km as the crow flies to Cambridge. (3)
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	---	Concern regarding level of development served near to Cambridge Road junction
		Will it make the transport network safer for and promote use of non-motorised modes?	0	

Site No: RE1

Address: Land off London Road

Location: Pampisford

Category of site: Retail

Site area: 2.5 ha

THEME	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	+++	Site is largely previously developed.
		Will it use land efficiently?	N/A	
		Will it protect and enhance the best and most versatile agricultural land?	0	Not agricultural land.
		Will it avoid the sterilisation of economic mineral reserves?	0	
	Will it minimise the degradation/loss of soils due to new development'?	0		
Minimise waste production and support the reuse and recycling of waste products	Will it encourage reduction in household waste, and increase waste recovery and recycling?	N/A		
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	-	Although this site is not located in an area of poor air quality, there is a potential for an increase in traffic and static emissions that could affect local air quality
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	-	Noise issues need to be appropriately addressed, to protect the amenity of nearby residential properties.
		Will it minimise, and where possible address, land contamination?	+	Contamination issues capable of being addressed by planning condition.
		Will it protect and where possible enhance the quality of the water environment?	0	Outside Groundwater Source Protection Zone
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiversity?	0	

	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	+	Recent planning applications included ecological appraisal, which identified no habitats of ecological value, although features on site offered local opportunities for wildlife. Appropriate mitigation and enhancement measures can be applied.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	0	No specific measures proposed.
Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	0 / -	Development will be seen from London Road and the A1301, but in the context of existing commercial buildings on the site. With appropriate design it will be possible to develop the site without significant impact on landscape or townscape with an appropriate mitigation strategy. There is significant planting along the Sawston Bypass screening the site from the west. If this frontage were opened up it would have a more significant landscape impact.
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	0 / -	As above.
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	0	No heritage designations near to the site.
	Create places, spaces and buildings that work well, wear well and look good	Will it lead to developments built to a high standard of design and good place making that reflects local character?	N/A	
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	0	
		Will it promote energy efficiency?	N/A	
		Will it minimise contributions to climate change through sustainable construction practices?	N/A	
	Reduce vulnerability to future climate change effects	Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	-	Site within zone 2 (medium risk). An FRA has demonstrated issues can be appropriately addressed.

		Will it minimise the likely impacts of climate change on the development through appropriate design?	N/A	
		Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?	N/A	
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?	N/A	
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?	N/A	
Inclusive Communities - Housing	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	0	No additional open space proposed.
	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?	N/A	
		Will it provide for housing for the ageing population?	N/A	
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	
Inclusive Communities - Redressing inequalities and involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	+++	Lies within Pampisford, an infill village which would score ---, but adjoins southern edge of Sawston.
		Sub-Indicator: Distance to centre	---	Sawston 1300m (measured to Sawston, infill village of Pampisford does not have a village centre)
		Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	+ / +++	Proposed for retail development.

		Will it improve relations between people from different backgrounds or social groups?	N/A	
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will it redress inequalities? Will it increase the ability of people to influence decisions, including 'hard to reach' groups?	N/A	
	Encourage and enable the active involvement of local people in community activities	Will it encourage engagement with community activities?	0	Proposed for retail development.
Economic Activity	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	---	Would result in loss of 1.6 hectares of employment land on the Iconix site, reducing the employment land available in Sawston.
		Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?	N/A	
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	- / ---	Potential impact on Sawston village centre through delivery of out of centre convenience retail.
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it encourage the rural economy and diversification, and support sustainable tourism?	N/A	
		Will it contribute to providing a range of employment opportunities, in accessible locations?	---	Would result in loss of 1.6 hectares of employment land on the Iconix site, reducing the employment land available in Sawston.
Support appropriate investment in people, places, communications and other infrastructure	Will it improve the level of investment in key community services and infrastructure, including broadband?	-	Minor Utilities Infrastructure improvements required, but constraints can be addressed. There is insufficient spare mains water capacity within the distribution zone to supply the number of proposed properties which could arise if all the SHLAA sites within the zone were to be developed. The sewerage network is approaching capacity and will require investigation and possibly mitigation.	

		Will it improve access to education and training, and support provision of skilled employees to the economy?	N/A	
Transport	Reduce the need to travel and promote more sustainable transport choices.	Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	0	
		Sub-indicator: Distance to bus stop / rail station	+++	Around 200 metres from bus stop.
		Sub-indicator: Frequency of Public Transport	-	Citi7 provides an approximately hourly frequency service during the day.
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	0	Timetabled 41 mins to Cambridge, 25 mins to Saffron Walden.
		Sub-indicator: Distance for cycling to City Centre or Market Town	0	11 km as the crow flies to Cambridge.
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	0	It is likely that access and capacity could be achieved but mitigation measures would be required. Further evidence would be required in the form of a Transport assessment and Travel Plan.
		Will it make the transport network safer for and promote use of non-motorised modes?	0	

Site No: RE2

Address Papworth Everard Business Park

Location Papworth Everard

Category of site

Site area 2.3 ha.

Theme	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	0	
		Will it use land efficiently?		
		Will it protect and enhance the best and most versatile agricultural land?	-	Grade 2, although now part of business park.
		Will it avoid the sterilisation of economic mineral reserves? Will it minimise the degradation/loss of soils due to new development?	0	
	Minimise waste production and support the reuse and recycling of waste products	Will it encourage reduction in household waste, and increase waste recovery and recycling?		
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	0	
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	0	
		Will it minimise, and where possible address, land contamination?	0	
		Will it protect and where possible enhance the quality of the water environment?	0	
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiversity?	0	
	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	0	
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	0	

Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	0	Site includes a landscaping buffer.
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	0	
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	0	
		Create places, spaces and buildings that work well, wear well and look good		
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	0	
		Will it promote energy efficiency?		
		Will it minimise contributions to climate change through sustainable construction practices?		
	Reduce vulnerability to future climate change effects	Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	0	
		Will it minimise the likely impacts of climate change on the development through appropriate design?		
		Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?		
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?		
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?		

Inclusive Communities - Housing	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	0	
	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?		
		Will it provide for housing for the ageing population?		
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	
Inclusive Communities - Redressing inequalities and involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	0	Minor Rural Centre
		Sub-Indicator: Distance to centre	-	900m
		Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	0	
		Will improve relations between people from different backgrounds or social groups?		
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will it redress inequalities?		
		Will it increase the ability of people to influence decisions, including 'hard to reach' groups?		
Encourage and enable the active involvement of local people in community activities	Will it encourage engagement with community activities?	0		

Economic Activity		Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	+	Would result in completion of this partially developed employment site, 2.3 hectares of employment land.
	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it encourage the rural economy and diversification, and support sustainable tourism?		
		Will it contribute to providing a range of employment opportunities, in accessible locations?	+	Would result in completion of this partially developed employment site, 2.3hectares of employment land.
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve the level of investment in key community services and infrastructure, including broadband?	0	
		Will it improve access to education and training, and support provision of skilled employees to the economy?	N/A	

Transport	Reduce the need to travel and promote more sustainable transport choices.	Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	0	Total score 13.
		Sub-indicator: Distance to bus stop / rail station	+	500m
		Sub-indicator: Frequency of Public Transport	---	Less than hourly service to Cambridge
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	+++	20 mins to Huntingdon / St.Ives
		Sub-indicator: Distance for cycling to City Centre or Market Town	0	11km to Huntingdon
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	0	
		Will it make the transport network safer for and promote use of non-motorised modes?	0	

Site No. Policy SP/12a (Site Specific Policies DPD)

Address Land east of B1050, Longstanton

Location Longstanton

Category of site

Site area 6.53 ha.

Theme	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	0	
		Will it use land efficiently?		
		Will it protect and enhance the best and most versatile agricultural land?	0	Grade 3.
		Will it avoid the sterilisation of economic mineral reserves? Will it minimise the degradation/loss of soils due to new development?	0	
	Minimise waste production and support the reuse and recycling of waste products	Will it encourage reduction in household waste, and increase waste recovery and recycling?		
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	0	
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	0	
		Will it minimise, and where possible address, land contamination?	0	
		Will it protect and where possible enhance the quality of the water environment?	0	
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiversity?	0	
	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	0	
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	0	

Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	-	Minor Negative Impact (Development conflicts with landscape character, minor negative impacts incapable of mitigation) - The site lies in an exposed area where the landscape is flat with long views, particularly across to the west, although this is broken up in part by field boundaries. The site is bisected by Hattons Road. However, the site has outline planning permission for employment uses, which includes details of the landscaping to mitigate and integrate the site into the landscape.
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	-	Minor Negative Impact (development conflicts with townscape character, minor negative impacts incapable of mitigation) - The site lies in an exposed area where the landscape is flat with long views, particularly across to the west, although this is broken up in part by field boundaries. The site is bisected by Hattons Road. However, the site has outline planning permission for employment uses, which includes details of the landscaping to mitigate and integrate the site into the landscape.
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	0	Neutral impact (existing features retained, or appropriate mitigation possible). Archaeological potential will require further information but the assumption for a neutral impact is that it is likely appropriate mitigation can be achieved through the development process.
	Create places, spaces and buildings that work well, wear well and look good	Will it lead to developments built to a high standard of design and good place making that reflects local character?		
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	0	
		Will it promote energy efficiency?		
		Will it minimise contributions to climate change through sustainable construction practices?		
	Reduce vulnerability to future climate change effects	Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	0	Flood zone 1 (low risk)
		Will it minimise the likely impacts of climate change on the development through appropriate design?		
	Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?			
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?		
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?		

Inclusive Communities - Housing	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	0	
	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?		
		Will it provide for housing for the ageing population?		
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	
Inclusive Communities - Redressing inequalities and involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	-	Group Village
		Sub-Indicator: Distance to centre	0	around 500m
		Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	+	
		Will improve relations between people from different backgrounds or social groups?		
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will it redress inequalities?		
		Will it increase the ability of people to influence decisions, including 'hard to reach' groups?		
	Encourage and enable the active involvement of local people in community activities	Will it encourage engagement with community activities?	0	

Economic Activity		Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	+	
	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it encourage the rural economy and diversification, and support sustainable tourism?		
		Will it contribute to providing a range of employment opportunities, in accessible locations?	+	Close to Northstowe
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve the level of investment in key community services and infrastructure, including broadband?	0	
		Will it improve access to education and training, and support provision of skilled employees to the economy?	0	

Transport	Reduce the need to travel and promote more sustainable transport choices.	Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	0	Total score of 13.
		Sub-indicator: Distance to bus stop / rail station	+	447m ACF from the centre of the site to the nearest bus stop.
		Sub-indicator: Frequency of Public Transport	-	Hourly Service
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	0	33 minutes from Longstanton to Cambridge
		Sub-indicator: Distance for cycling to City Centre or Market Town	+	9.11km ACF from the centre of the site to St. Ives Market.
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	0	No capacity constraints identified, safe access can be achieved. A14 capacity issues.
		Will it make the transport network safer for and promote use of non-motorised modes?	0	No impact.

Inclusive Communities - Redressing inequalities and involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	-	Group Village
		Sub-Indicator: Distance to centre	---	1200m
		Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	0	
		Will improve relations between people from different backgrounds or social groups?		
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will it redress inequalities?		
		Will it increase the ability of people to influence decisions, including 'hard to reach' groups?		
	Encourage and enable the active involvement of local people in community activities	Will it encourage engagement with community activities?	0	

Economic Activity		Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	+	Would result in completion of this partially developed employment site, 1.7 hectares of employment land.
	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it encourage the rural economy and diversification, and support sustainable tourism?		
		Will it contribute to providing a range of employment opportunities, in accessible locations?	+/?	Would result in completion of this partially developed employment site, 1.7 hectares of employment land. However, site is relatively isolated.
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve the level of investment in key community services and infrastructure, including broadband?	0	
		Will it improve access to education and training, and support provision of skilled employees to the economy?	N/A	

Transport	Reduce the need to travel and promote more sustainable transport choices.	Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	0	Total score 11.
		Sub-indicator: Distance to bus stop / rail station	-	900m
		Sub-indicator: Frequency of Public Transport	-	Citi 5 Hourly service to Cambridge
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	0	52 mins to Cambridge
		Sub-indicator: Distance for cycling to City Centre or Market Town	+	7km to st.ives
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	0	
		Will it make the transport network safer for and promote use of non-motorised modes?	0	

Site No: CF1

Address: Chesterton Fen Road

Location: Milton (Detached)

Category of site: Residential Moorings (proposed by Cam Conservators)

Site area: 1 ha in South Cambridgeshire, adjoins further land in Cambridge

THEME	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	0	Greenfield site.
		Will it use land efficiently?	N/A	
		Will it protect and enhance the best and most versatile agricultural land?	0	Agricultural land grade 4.
		Will it avoid the sterilisation of economic mineral reserves?	0	
	Will it minimise the degradation/loss of soils due to new development'?	0		
Minimise waste production and support the reuse and recycling of waste products	Will it encourage reduction in household waste, and increase waste recovery and recycling?	N/A		
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	0	
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	0	
		Will it minimise, and where possible address, land contamination?	0	
		Will it protect and where possible enhance the quality of the water environment?	0	Outside Groundwater Source Protection Zone
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiveristy?	0	River Cam corridor is a County Wildlife Site.

	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	-	<p>There would be a substantial change of habitat from meadow to open water.</p> <p>The infrastructure needed for moorings and erosion control may lead to limited opportunities for habitat creation</p> <p>There will be negative impacts on existing species, but some potential for improvements to support some species e.g. water voles. The value of the existing meadow, hedge and scrub habitats land would need to be investigated.</p>
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	0	No specific measures proposed. Access to the river from Fen Road would probably be improved
Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	---	<p>The land in South Cambridgeshire is in the Green Belt.</p> <p>The area comprises a number of small fields and paddocks along the north bank of river, bordered by trees and hedges.</p> <p>The site contributes to a distinctive green and semi- rural entrance to Cambridge from the north east, as viewed from both Fen Road and from the river towpath. The site forms part of a green corridor and is linked visually with meadows on the south bank of the river.</p> <p>Development would replace these paddocks with water, and could require the removal of trees along the river frontage to provide access. Significant engineering elements such as a bridge or lock may be required, together with supporting infrastructure such as car parking, hard standings, reinforced river banks, waste disposal facilities etc</p> <p>This would have a negative impact on the local landscape character, which would substantially altered. Some mitigation could be applied in the form of planting to reduce these effects.</p>
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	---	<p>A significant area of boat moorings would add to the level of development along the Cam corridor on the edge of Cambridge.</p> <p>Development of this site would be particularly significant to the local character as all existing development to the north and east is set back from the river. Development at the river's edge will extend the urban character out towards Fen Ditton.</p> <p>The Cambridge Local Plan Inspectors Report 1996 noted that the site could provide low key facilities, like water points and rubbish collection, which would minimise the impact.</p>
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	-	<p>Fen Ditton Conservation Area lies on the south side of the River Cam. Diagonally opposite the site.</p> <p>The development site forms part of a green corridor with meadows within the Fen Ditton Conservation areas. Clear linking views are possible between the site and the Conservation Area. The river corridor in this area appears relatively undeveloped due to trees and planting. Opening up this frontage to deliver a marina would impact on this rural character, the Conservation area and its setting.</p> <p>Area of Iron Age and Saxon inhumations (MCB6756 and 6758) and Roman occupation (MCB6757) found in the area in a former gravel pit (shown on 1st and 2nd ed OS maps). Owing to the presence of burials evidence of further similar remains should be obtained prior to any planning decision in order that an appropriate mitigation strategy can be devised for any potential cemetery or, if remains are deemed to be of national significance, to object to development in this area. A Pre-determination evaluation will be required ahead of any planning determination.</p>

	Create places, spaces and buildings that work well, wear well and look good	Will it lead to developments built to a high standard of design and good place making that reflects local character?	N/A	
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	0	
		Will it promote energy efficiency?	N/A	
		Will it minimise contributions to climate change through sustainable construction practices?	N/A	
	Reduce vulnerability to future climate change effects	Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	0	Parts of site within flood zone 3. However, a marina would be water compatible development. Appropriate design would be required to ensure development did not increase flood risk off site.
		Will it minimise the likely impacts of climate change on the development through appropriate design?	N/A	
	Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?	N/A		
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?	N/A	
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?	N/A	
Inclusive Communities - Housing	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	0	No additional open space proposed.
	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?	+	Would deliver housing through providing suitable parking for house boats.
		Will it provide for housing for the ageing population?	N/A	

		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	
Inclusive Communities - Redressing inequalities and involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	+++	Adjoins the edge of Cambridge.
		Sub-Indicator: Distance to centre	-	1000m to Chesterton, local centre in Cambridge.
		Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	+	Additional leisure facility, support for tourism.
		Will improve relations between people from different backgrounds or social groups?	N/A	
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will it redress inequalities?	N/A	
		Will it increase the ability of people to influence decisions, including 'hard to reach' groups?	N/A	
	Encourage and enable the active involvement of local people in community activities	Will it encourage engagement with community activities?	0	
Economic Activity	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	0	Potential to support tourism.
		Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?	N/A	

		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0	
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it encourage the rural economy and diversification, and support sustainable tourism?	+	Potential to support tourism.
		Will it contribute to providing a range of employment opportunities, in accessible locations?	0	
	Support appropriate investment in people, places, communications and other infrastructure	Will it improve the level of investment in key community services and infrastructure, including broadband?	+	Minor Utilities Infrastructure improvements required, but constraints can be addressed.
		Will it improve access to education and training, and support provision of skilled employees to the economy?	N/A	
Transport	Reduce the need to travel and promote more sustainable transport choices.	Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	+++	
		Sub-indicator: Distance to bus stop / rail station	-	900m to Bus stop on Chesterton High Street.
		Sub-indicator: Frequency of Public Transport	+++	Approximately every 10 minutes.
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	+++	Timetabled 12 mins to Cambridge.
		Sub-indicator: Distance for cycling to City Centre or Market Town	+++	3 km as the crow flies to Cambridge.
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	-	Impact / mitigation on Fen Road would need to be explored in more detail via a Transport Assessment / Travel Plan.
		Will it make the transport network safer for and promote use of non-motorised modes?	?	Impact on Cam Cycle way would need to be appropriately addressed.

Site No: PC1

Address: Station Road, Histon

Location: Histon

Category of site: Mixed Use Development (Parish Proposal)

Site area: 4.6 ha

THEME	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	+	The majority of the area is previously developed. The proposal also advises that current green space will be preserved.
		Will it use land efficiently?	N/A	
		Will it protect and enhance the best and most versatile agricultural land?	0	The area does not include any agricultural and.
		Will it avoid the sterilisation of economic mineral reserves?	0	
	Will it minimise the degradation/loss of soils due to new development'?	0		
Minimise waste production and support the reuse and recycling of waste products	Will it encourage reduction in household waste, and increase waste recovery and recycling?	N/A		
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	0	
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	0	Noise issues from new businesses would need to be appropriately addressed, including any impacts on existing residential development. Impacts from Guided Busway would also need to be addressed.
		Will it minimise, and where possible address, land contamination?	+	There is potentially contamination related to former uses e.g. railways, that would need to be appropriately addressed by any development proposals.
		Will it protect and where possible enhance the quality of the water environment?	0	Outside Groundwater Source Protection Zone
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiveristy?	0	No designated sites in the vicinity.

	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	+	Majority of site comprises previously developed land and buildings. There may be some opportunities for enhancement. The proposal also advises that current green space will be preserved. There are a number of trees protected by Tree Preservation Orders in the area. The impact of any development proposals would need to be considered.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	0	No specific measures proposed.
Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	0	The area is largely surrounded by built development, and therefore wider landscape impacts are likely to be limited.
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	+	The focus of the proposal is to improve townscape in this area, by creating a gateway to the village.
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	0	Histon and Impington Conservation Area lies to the north of the site. Impacts would need to be considered.
	Create places, spaces and buildings that work well, wear well and look good	Will it lead to developments built to a high standard of design and good place making that reflects local character?	N/A	
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	0	
		Will it promote energy efficiency?	N/A	
		Will it minimise contributions to climate change through sustainable construction practices?	N/A	
	Reduce vulnerability to future climate change effects	Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	0	Site within zone 1 (low risk). Areas are identified in the Surface Water Management Plan as being at risk of surface water flooding. This would need to be addressed by any development proposal.

		Will it minimise the likely impacts of climate change on the development through appropriate design?	N/A	
		Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?	N/A	
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?	N/A	
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?	N/A	
Inclusive Communities - Housing	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	0	No additional open space proposed.
	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?	N/A	
		Will it provide for housing for the ageing population?	N/A	
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	
Inclusive Communities - Redressing inequalities and involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	+	Histon & Impington is a Rural Centre,
		Sub-Indicator: Distance to centre	---	1100m to centre of Histon
		Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	+	Proposal indicates commercial and retail development, accessible to local residents, complimenting facilities elsewhere in the village.

		Will it improve relations between people from different backgrounds or social groups?	N/A	
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will it redress inequalities? Will it increase the ability of people to influence decisions, including 'hard to reach' groups?	N/A	
	Encourage and enable the active involvement of local people in community activities	Will it encourage engagement with community activities?	+ / ?	The proposal indicates a range of potential uses, some of which could support community activities.
Economic Activity	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	+ / ?	The proposal indicates the potential to deliver additional employment, although the quantity is not clear at this stage.
		Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?	N/A	
	Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	+ / ?	Opportunity to compliment the village centre, and provide services to the southern end of the village. Scale of development would need to be considered, to ensure it does not have negative impacts on village centre.	
	Help people gain access to satisfying work appropriate to their skills, potential and place of residence	Will it encourage the rural economy and diversification, and support sustainable tourism?	N/A	
		Will it contribute to providing a range of employment opportunities, in accessible locations?	+ / ?	The proposal indicates the potential to deliver additional employment, although the quantity is not clear at this stage.
Support appropriate investment in people, places, communications and other infrastructure	Will it improve the level of investment in key community services and infrastructure, including broadband?	+	Minor Utilities Infrastructure improvements required, but constraints can be addressed.	

		Will it improve access to education and training, and support provision of skilled employees to the economy?	N/A	
Transport	Reduce the need to travel and promote more sustainable transport choices.	Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	+++	Based on the Guided Bus which runs through the site.
		Sub-indicator: Distance to bus stop / rail station	+++	Based on the Guided Bus which runs through the site.
		Sub-indicator: Frequency of Public Transport	+++	Approximately every 7 minutes.
		Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	+	Timetabled 17 mins to Cambridge.
		Sub-indicator: Distance for cycling to City Centre or Market Town	+++	4 km as the crow flies to Cambridge.
	Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	0 / -	Existing road access to the site, impacts and mitigation would depend on individual development proposals, which would need to be assessed.
		Will it make the transport network safer for and promote use of non-motorised modes?	0	

Site No: PC2

Address: Land at Cottenham

Location: Cottenham

Category of site: Mixed Use Development (Parish Proposal)

Site area: 90 ha

THEME	Sustainability Objective	Decision Making Criteria	Score	Notes
Land & Soil Resources	Minimise the irreversible loss of undeveloped land, economic mineral reserves, and productive agricultural holdings and the degradation / loss of soils	Will it use land that has been previously developed?	0	No previously developed land.
		Will it use land efficiently?		
		Will it protect and enhance the best and most versatile agricultural land?	---	Significant loss of best and most versatile agricultural land (Grades 1 and 2) - most of site Grade 1.
		Will it avoid the sterilisation of economic mineral reserves? Will it minimise the degradation/loss of soils due to new development?	0	Site not within an area designated in the Minerals and Waste LDF.
	Minimise waste production and support the reuse and recycling of waste products	Will it encourage reduction in household waste, and increase waste recovery and recycling?		
Air Quality and Environmental Pollution	Improve air quality and minimise or mitigate against sources of environmental pollution	Will it maintain or improve air quality?	-	Scale of development has potential to impact on air quality. Site lies in an area where air quality acceptable.
		Minimise, and where possible improve on, unacceptable levels of noise, light pollution, odour and vibration?	-	Development compatible with neighbouring uses. Some minor to moderate additional road traffic noise generation impact on existing residential due to development related car movements but dependent on location of site entrance.
		Will it minimise, and where possible address, land contamination?	0	Development not on land likely to be contaminated.
		Will it protect and where possible enhance the quality of the water environment?	0	Development unlikely to affect water quality. Assumptions for a neutral impact are that appropriate standards and pollution control measures will be achieved through the development process, e.g. as part of Sustainable Drainage Systems (Suds).
Biodiversity	Avoid damage to designated sites and protected species	Will it conserve protected species and protect sites designated for nature conservation interest and geodiversity?	0	No impact on protected sites and species (or impacts could be mitigated).

	Maintain and enhance the range and viability of characteristic habitats and species	Will it reduce habitat fragmentation, enhance native species, and help deliver habitat restoration (helping to achieve Biodiversity Action Plan Targets)?	0	Assumptions for a neutral impact are that existing features that warrant retention can be retained or appropriate mitigation will be achieved through the development process.
	Improve opportunities for people to access and appreciate wildlife and green spaces	Will it improve access to wildlife and green spaces, through delivery and access to green infrastructure?	+ / ?	Given scale of the site, there may be potential to deliver additional Green Infrastructure.
Landscape, Townscape and Cultural Heritage	Maintain and enhance the diversity and distinctiveness of landscape and townscape character	Will it maintain and enhance the diversity and distinctiveness of landscape character?	---	Significant Negative Impact (Development conflicts with landscape character, with significant negative impacts incapable of mitigation) - Development in this location would constitute a large sporadic form of development, detached from the village, and would represent a significant intrusion into open countryside.
		Will it maintain and enhance the diversity and distinctiveness of townscape character?	---	Significant Negative Impact (Development conflicts with townscape character, with significant negative impacts incapable of mitigation) - Development in this location would constitute a large sporadic form of development, detached from the village, and would represent a significant intrusion into open countryside.
	Avoid damage to areas and sites designated for their historic interest, and protect their settings.	Will it protect or enhance sites, features or areas of historical, archaeological, or cultural interest (including conservation areas, listed buildings, registered parks and gardens and scheduled monuments)?	---	Significant Negative Impact on historic Assets (incapable of satisfactory mitigation) - Development would have a detrimental impact on the wider setting of Grade I Listed church and Conservation Area.
	Create places, spaces and buildings that work well, wear well and look good	Will it lead to developments built to a high standard of design and good place making that reflects local character?		
Climate Change	Minimise impacts on climate change (including greenhouse gas emissions)	Will it support the use of renewable energy resources?	0	Standard requirements for renewables would apply.
		Will it promote energy efficiency?		
		Will it minimise contributions to climate change through sustainable construction practices?		

	Reduce vulnerability to future climate change effects	Will it minimise risk to people and property from flooding, and incorporate sustainable drainage measures?	0	Primarily Flood Zone 1 (small part in flood zone 3)
		Will it minimise the likely impacts of climate change on the development through appropriate design?		
		Will it use water in a sustainable manner, and enable and encourage high levels of water efficiency?		
Health	Maintain and enhance human health	Will it promote good health, encourage healthy lifestyles, and reduce health inequalities?		
	Reduce and prevent crime and reduce fear of crime	Will it reduce actual levels of crime, and will it reduce fear of crime?		
Inclusive Communities - Housing	Improve the quantity and quality of publically accessible open space.	Will it increase the quantity and quality of publically accessible open space?	0	Neutral impact (existing features retained or appropriate mitigation). Assumption is standard requirements for open space would apply.
	Ensure all groups have access to decent, appropriate and affordable housing	Will it support the provision of a range of housing types and sizes, including affordable and key worker housing, to meet the identified needs of all sectors of the community?		
		Will it provide for housing for the ageing population?		
		Will it provide for the housing accommodation needs of Gypsies and Travellers and Travelling Showpeople?	0	No effect on pitch or plot provision.

Inclusive Communities - Redressing inequalities and involving the community	Improve the quality, range and accessibility of services and facilities (e.g. health, transport, education, training, leisure opportunities)	Will it improve accessibility to key local services and facilities, including health, education and leisure (shops, post offices, pubs, sports facilities etc?)	0	Minor Rural Centre (consulting on upgrade to Rural Centre)
		Sub-Indicator: Distance to centre	---	Over 1000m from nearest centre ACF (1,312m from Cottenham, High Street)
		Will it improve quality and range of key local services and facilities including health, education and leisure (shops, post offices, pubs etc?)	+ /+++	Development of this scale could potentially deliver new facilities for the village.
		Will improve relations between people from different backgrounds or social groups?		
	Redress inequalities related to age, disability, gender assignment race, faith, location and income	Will it redress inequalities?		
		Will it increase the ability of people to influence decisions, including 'hard to reach' groups?		
	Encourage and enable the active involvement of local people in community activities	Will it encourage engagement with community activities?	+ / ?	Development of this scale could potentially deliver new facilities for the village.
Economic Activity	Improve the efficiency, competitiveness, vitality and adaptability of the local economy.	Will it support business development and enhance competitiveness, enabling provision of high-quality employment land in appropriate locations to meet the needs of businesses, and the workforce?	+	Proposal includes employment development, which could enhance employment availability in the village. Evidence suggests the primary employment need is located in or on the edge of Cambridge.

		Will it promote the industries that thrive in the district – the key sectors such as research and development /high tech/ Cambridge university related particularly through the development and expansion of clusters?		
		Will it protect the shopping hierarchy, supporting the vitality and viability of Cambridge, town, district and local centres?	0 / ?	The impact of new services to serve a major development would need to be considered on the existing centre, but could be designed to support existing centre.
Help people gain access to satisfying work appropriate to their skills, potential and place of residence		Will it encourage the rural economy and diversification, and support sustainable tourism?		
		Will it contribute to providing a range of employment opportunities, in accessible locations?	+	29.56 minutes from site to nearest employment area with 2000+ employees. Only 1 employment area with 2000+ employees that can be accessed in less than 30mins - 1.6km walk.
Support appropriate investment in people, places, communications and other infrastructure		Will it improve the level of investment in key community services and infrastructure, including broadband?	+	Major Utilities Infrastructure improvements required, but constraints can be addressed. Electricity is likely to require reinforcement. There is insufficient spare mains water capacity within the distribution zone to supply the number of proposed properties which could arise if all the SHLAA sites within the zone were to be developed. Gas is likely to require reinforcement. The sewerage network is approaching capacity and will require investigation and possibly mitigation.
		Will it improve access to education and training, and support provision of skilled employees to the economy?	?	School capacity not sufficient. Insufficient primary and secondary school capacity. It would require provision of new schools, and would need to be explored further.
Transport Reduce the need to travel and promote more sustainable transport choices.		Will it enable shorter journeys, improve modal choice and integration of transport modes to encourage or facilitate the use of modes such as walking, cycling and public transport?	0	Total Score of 14
		Sub-indicator: Distance to bus stop / rail station	0	862m to nearest bus stop (Cottenham, Church Close - 106 service) 1,307m to nearest Citi 8 bus stop (Cottenham, Lambs Lane) New development of this scale would require new bus stops which would mostly fall within 800m of the site.

	Sub-indicator: Frequency of Public Transport	+	Less than hourly service (106 service) 20 minute service (Citi 8)
	Sub-indicator: Typical Public Transport Journey Time to Cambridge City Centre or Market Town	0	30-60 Minutes (Cottenham, Church Close to Ely, Market Street) 36 Minutes (Cottenham, Lambs Lane to Cambridge, Emmanuel Street)
	Sub-indicator: Distance for cycling to City Centre or Market Town	+	9.95km ACF to Cambridge City Centre
Secure appropriate investment and development in transport infrastructure, and ensure the safety of the transport network.	Will it provide safe access to the highway network, where there is available capacity?	?	Significant infrastructure improvements would be required to accommodate a development of this scale. The proposal seeks to include a bypass, which could increase capacity, and address traffic issues in the village centre. The feasibility of this would need further exploration, including whether there is sufficient development to fund a bypass, and whether land not included within the development would be available for a bypass.
	Will it make the transport network safer for and promote use of non-motorised modes?	?	The Highway Authority will require new development to provide or contribute to the provision of infrastructure to encourage more sustainable transport links both on and off site. This is a large site, so provision or contribution from this site would result in significant improvement to public transport, walking or cycling facilities. However, provision of a bypass could encourage additional road trips.
